JANUARY, 1934

[NUMBER 1

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

**E**MPLOYMENT at the beginning of December, 1933, showed a further expansion, the eighth consecutive gain reported since April. The increase was particularly interesting in that it reversed the downward movement which hitherto has invariably characterized the situation in the early winter. The Dominion Bureau of Statistics tabulated reports from 8,428 employers, whose payrolls were enlarged from 845,793 on November 1 to 850,486 at the beginning of December. Reflecting this advance, the index (average 1926=100) rose from 91.3 on the former date to 91.8 on December 1. This is the highest figure in two years. On December 1 in the twelve preceding years, the index was as follows: 1932, 83.2; 1931, 99.1; 1930, 108.5; 1929, 119.1; 1928, 116.7; 1927, 108.1; 1926, 102.3; 1925, 96.5; 1924, 91.9; 1923, 96.9; 1922, 96.3 and 1921, 88.3.

At the beginning of December, 1933, the unemployment percentage reported to the Department of Labour by local trade unions was 20.4 in comparison with percentages of 19.8 at the beginning of November, and with 22.8 at the beginning of December, 1932. The December percentage was based on the reports received by the Department of Labour from 1,722 labour organizations covering a membership of 146,946 persons.

Reports received during November, 1933, from the offices of the Employment Service of Canada showed a gain over October and also over November a year ago in the average daily placements effected. This was largely due to the various municipal and provincial relief works in progress throughout the Dominion. Vacancies in November, 1933, numbered 41,475, applications 68,660, and there were 39,709 placements in regular and casual employment.

In retail prices the cost per week of a family budget of staple foods, fuel and lighting and rent was higher in December at \$15.83 as compared with \$15.72 the previous month. The increase was due mainly to seasonal in-

creases in the prices of eggs and butter which more than offset decreases in the prices of meats and potatoes. Some comparative figures for earlier dates are \$15.41 for June, 1933, the low point; \$16.01 for December, 1932; \$22.11 for December, 1929; \$21.40 for December, 1926; \$21.49 for December, 1921; \$26.92 for July, 1920 (the post war peak); and \$14.26 for December, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics was again slightly higher at 69.0 for December as compared with 68.7 in November and 63.6 in February, the low point. Figures for certain earlier dates are 64.0 in December, 1932; 96.0 in December, 1929; 97.9 in December, 1926; 96.4 in December, 1921; 164.3 in May, 1920 (the post war peak); and 66.4 in December, 1914. The advance in December was due in large measure to higher prices for live stock, butter, fresh and cured meats.

The latest statistics available reflecting industrial conditions are given in the table on page 3. The index of the physical volume of business in November was somewhat lower than in October but it was still 28 per cent above the low point reached in February and 13 per cent above November, 1932. Of the chief components of the index electric power output was substantially higher than in the previous month while mineral production, manufacturing, construction and distribution were lower. As compared with a year ago, however, all these factors except construction were higher. Figures available for December indicate further improvement in employment and in wholesale prices, the indexes of which were both higher than in November, the reverse of the movement last year during the same period. Car loadings and contracts awarded were lower than in November but were substantially higher than a year ago. Production of iron and steel increased.

The time loss due to industrial disputes during December showed very little change from that recorded for the previous month, the number of workers involved also being practically unchanged although the number of

strikes and lockouts recorded was substantially lower, the high figures for the first two items being due largely to the expansion during December of the disputes involving pulpwood cutters in Northern Ontario and Quebec and to a strike of woollen factory workers in Hespeler, Ont. As compared with December, 1932, the number of strikes and lockouts recorded was slightly larger, while the number of workers involved was almost twice as great and the time loss over five times that recorded for the same month last year. There were in existence during the month fourteen disputes, involving 4,098 workers, and resulting in a time loss of 49,653 working days, as compared with twenty disputes, involving 3,974 workers and resulting in a time loss of 49,543 working days in November. In December, 1932, there were on record twelve disputes, involving 2,854 workers and resulting in a time loss of 9,146 working days. At the end of the month there was on record one dispute, recorded as a strike or lockout, involving approximately 134 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected, but which had not been called off by the union.

#### **Industrial Disputes Investigation Act**

During the past month the Department received the report of the Board of Conciliation and Investigation appointed in connection with the dispute between the British Columbia Electric Railway Company Limited and certain of their employees. The text of this report, with particulars of recent proceedings under the Act appears on page 8 of this issue.

#### **Supplements on Wages and Hours of Labour and on Prices**

Two supplements are published with this issue of the LABOUR GAZETTE, continuing the series on wages and on prices issued annually in January in recent years. The first is the seventeenth report in the "Wages and Hours of Labour" series, and gives information as to the year 1933, with comparative figures for 1932 and earlier years; it contains tables showing the wages and working hours of the principal classes of labour throughout the Dominion in various industries. The second supplement deals with the movement in retail and wholesale prices in Canada in 1933 and in previous years; tables are also given showing the movement of prices in other countries throughout the world.

#### **Canadians invited to study problem of world peace**

The League of Nations Society in Canada has invited social organizations throughout the Dominion to participate in a special effort to promote the study by Canadians of the problem of preserving world peace. An appeal in support of the movement was issued at Ottawa on January 7, signed by the leaders of the three major political parties, the Right Hon. R. B. Bennett, the Right Hon. W. L. Mackenzie King, and Mr. J. S. Woodsworth. The appeal was in part as follows:—

"The League of Nations Society in Canada offers an outline of study in which all our citizens may participate. Without commenting on the details of this project, we commend it to the Canadian people and urge them to inform themselves of the issues which confront the world at the present time. Without doubt world peace is menaced to-day as at no time since the close of the Great War. Canadians did their part nobly in that war and know only too well its horror and its cost in blood and treasure. Another such conflict might imperil western civilization. The people of this country worked together in the war. We ask them now to work together in the nobler task of helping to substitute for the use of violence and force in international relations, the principles of law and justice upon which a world society as well as a national society must rest."

An outline of study for groups or individuals has been prepared by the League of Nations Society, whose headquarters are at Ottawa.

#### **B.C. Hours of Work Regulations to be revised**

Mr. Adam Bell, Deputy Minister of Labour for British Columbia and chairman of the Board of Adjustment administering the Hours of Work Act, 1923, stated recently that the regulations under the Act, which have been in effect since 1925 (LABOUR GAZETTE, April, 1925, page 346; September, 1925, page 881, etc.), and which permit overtime in certain cases (beyond the statutory 8-hour day), were being studied with a view to their revision in order to bring them into conformity with prevailing conditions. Mr. Bell stated that there would be strict supervision of industry in regard to the practice of overtime work: "The need for employers of labour," he said, "to eliminate overtime and prevent excessive hours so that available employment may be distributed over the greatest possible number of workers, was never greater than it is to-day, and co-operation towards this end is the paramount need of the day."

## MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(Official statistics except where noted)

(1) Calculated from yields of Ontario bonds.

(2) For group figures, see articles elsewhere in this issue.

(4) Figures for end of previous month.

(6) Figures for four weeks ending December 30, 1933, and corresponding previous periods.

(7) Sugar production given in periods of four weeks ending December 2, November 4 and October 7, 1933: December 3, November 5 and October 8, 1932.

(7) MacLean's Building Review.

Notice was published in the *British Columbia Gazette*, December 7, 1933, that Messrs. Adam Bell (chairman), Robert Morrison, and N. deW. Lyons have been appointed pursuant to the "Hours of Work Act, 1923," to be and constitute the Board of Adjustment defined by the said Act.

Public hearings were held by the Board during December at Victoria and Vancouver to receive recommendations and comments from persons interested or concerned regarding the regulations now in force which have been made pursuant to the Act and any modifications or cancellations thereof or additions thereto.

#### **Agreement on hours of work on Montreal tramways**

The intimation made last September by the Hon. C. J. Arcand, Minister of Labour of Quebec, that it might be necessary to bring the employees of the Montreal Tramways Company under the operation of the Hours of Work Act, 1933, was noted in the *LABOUR GAZETTE*, September, 1933, page 374. Subsequently the company and its employees asked for time in which to come to an agreement, and a meeting was held on November 17 the men being represented by a special committee representing the International and Catholic Unions, and on the other side were representatives of the Montreal Tramways Company. At this conference a tentative agreement was reached under which it was decided that no employee of the company could work more than 54 hours a week. Secondly, it was decided that those who have the right to work from 45 to 54 hours a week in exercise of seniority rights, must work such hours within a period of six days. Hitherto the week was on a seven-day basis. "Spare" men are not to work more than 42 hours within a period of seven days.

In a statement on January 5 the Minister said: "It will be noticed that this redistribution of hours does a great deal in the matter of more equitable arrangements as to work, since it cuts down a 63-hour week, generally, to one of 54, maximum. The hours of work no longer to be done by the senior men will give the younger men a better chance of making adequate incomes. Under the old arrangements they suffered seriously from reduced hours."

#### **Hours of work of gasoline station employees at Montreal**

gasoline stations. This Act, which limits

The intimation made last September by the Hon. C. J. Arcand, Minister of Labour of Quebec, that it might be necessary to bring the employees of the Mont-

working hours to 40 hours in the week, now applies to the Building industry throughout the Province (*LABOUR GAZETTE*, July, 1933, page 701, and August, page 776). The secretary of the Council, in a published statement, said that some gasoline station employees were required to work as much as 90 hours per week, for wages as low as \$15. He stated further that the international labour movement will exert pressure upon the Provincial Government to give some relief for this type of workman, despite the fact that gasoline station employees are not organized into unions and do not form a part of the trades union movement.

#### **Self-help among the unemployed at Montreal**

In continuation of the series of bulletins on the constructive use of leisure time (*LABOUR GAZETTE*, November, 1933, page 1091) the Canadian Council on Child and Family Welfare has published a report dealing with the special needs of men and boys. While the unemployed are primarily concerned with obtaining work, they have also, it is stated, shown willingness to take advantage of opportunities for self-improvement, with considerable ability to help each other in this direction. One experiment for mutual help has been tried out at Montreal with some success. A "questionnaire" was circulated through the central office where the men came for relief, asking them to state if they had any qualifications that would enable them to lead a small class in any subject, including any form of athletics or handicraft, as well as academic subjects. "The response was quite surprising," the bulletin states, "and several classes were organized almost at once utilizing the services of some of the men as instructors. It might be possible to carry out similar projects on a much wider scale. The following up of the questionnaire by steering the men into already organized classes operated by various agencies in the community (on a free basis so long as they remain unemployed), might be attempted, indeed has already been attempted with some success."

The need for recreation facilities in connection with relief projects is emphasized in the bulletin: "It should be the duty of the administration in each instance to take charge of organizing for the profitable use of the men's free time. There need be no elaborate provision, but especially in the winter months there is emphatically a definite need for a certain amount. The quantity of the equipment will depend on the number of men engaged, but should include as a minimum:

a generous supply of reading matter—books, magazines and newspapers; a few pairs of boxing gloves; checkers and boards; material for whittling. If there are any musicians in camp—and what large group of men is quite without them?—every effort should be made to see that they are supplied with instruments, such as banjos, accordeons, harmonicas or guitars. If necessary an appeal to the public might be made for these. Group singing should be given every encouragement. Summer equipment should include softball supplies. Horseshoes and pegs will probably not require much hunting in the average construction camp. A football league should be organized in every camp.”

### Unemployed workers' education in Great Britain

The educational work carried on by the Workers' Educational Association on behalf of the unemployed in Great Britain is described in the 13th annual report of the Association, covering the period ending May 31, 1933. Thousands of unemployed men and women attended the ordinary classes, and also the special lectures and short courses provided for unemployed groups throughout the country. The courses are of a non-vocational character. The Association co-operates with other educational bodies, provided that the autonomy of the W.E.A. is maintained, and that the education given is of a type which the Association is qualified to provide. Special mention is made of the work in rural districts, which “has brought a new impulse and interest in the village life.”

A recent report by the Adult Education Committee of the Board of Education (England and Wales) refers to the value of the educational work carried on by voluntary organizations such as the W.E.A., supplementing the work of the official education authorities. “There are solid reasons,” the report states, “for maintaining the existing partnership between statutory and voluntary bodies. The division of functions on which this partnership is based is to the advantage of both, and is a unique phenomenon in the history of adult education. The wide diversity of interests which exists among students can only be focused by voluntary bodies working independently, but united as a federal whole within the framework of the Adult Education Regulations. Speaking generally, the adult education movement is unsystematic and this causes difficulties both to local education authorities in the administration of their areas and also to voluntary bodies in their approach to local education authorities.

The remedy lies in schemes of local co-operation, of which several excellent examples exist. Such schemes, which can be varied to suit local circumstances, act as a clearing-house, avoid overlapping, and preserve the necessary balance as between different types of courses.”

### Co-operation recommended for Manitoba fishermen

The appointment last year of a commission to inquire into conditions in the fishing industry in Manitoba, following an inquiry by a committee of the provincial legislature, was noted in the *LABOUR GAZETTE*, July, 1933, page 702. In their report, recently issued, the commissioners suggest a way to overcome the evils of uneconomic competition and at the same time restrain collective action from becoming monopoly control; they seek also to obtain a greater regulatory control over United States companies or their Canadian subsidiaries which produce or buy fish in Manitoba. The report recommends: (1) the establishment of a clearing house, members of which are to consist of the holders of exporter's licences, representatives of the fishermen, and representatives of the government; (2) an inter-provincial conference to be called immediately to consider the situation which is developing in the United States under the National Recovery Act, and to consider what action can be taken in respect thereto; (3) in view of the peculiarly national problems involved in the marketing of fish, consideration to be given by the conference mentioned in the second recommendation, to the turning over of the administration of all commercial fisheries to the federal government.

“Curtailement of production and a system of orderly marketing,” the commissioners suggest, “would appear to be the only way by which the fishermen can obtain a fair return on their investment of time and money. Co-operation is the only way by which this can be attained. Such co-operation must not only exist between the fishermen themselves, and the distributing agencies themselves, but as between the fishermen and the agencies.

“We cannot refrain from suggesting to the fishermen that collective action should be a permanent feature of the industry. Such action should not be born in mere discontent, or to be directed solely against existing abuses which they may rightly believe should be removed. Its purpose should be the attainment of progressive improvements in the whole industry, and conditions in the industry cannot in our judgment, be greatly improved unless the fishermen are organized

not only to protect the welfare of the group, but also to make their contribution in working co-operatively with the distributors and the government in deciding what courses to follow."

**Prize for Essay  
on Co-operative  
Organization  
of Industry**

The Robert Owen Foundation, a non-political, Canadian organization, incorporated in the Dominion of Canada in 1932 for the purpose of encouraging, by education and otherwise, the co-operative organization of industry and community, will grant a cash prize of \$50 to the writer of the best essay, not exceeding 3,000 words in length, on one of the following subjects:—

(1) Why and how existing industry enterprises should be organized on a co-operative basis;

(2) Study of co-operative effect by unemployed citizens. (Essayists writing on this topic should give a history or record of any one or more examples of co-operative self-help by unemployed citizens, in establishing communities, exchanging products or services, operating industrial enterprises, etc.);

(3) The place of co-operative societies within a socialist state. (By this it is intended that the essay should develop the argument for and against co-operative control of agriculture, industry and distribution in a state wholly socialistic or in the process of becoming such.)

The contest is open to all persons under thirty years of age, living in Canada. The essays must be mailed to the President of the Robert Owen Foundation, Mr. H. E. Langford, 91 Gothic Ave., Toronto, before March 15, 1934. The name of the writer should be submitted on a separate sheet, together with a note stating address, occupation, place and date of birth, and education received.

**Increase in  
home con-  
sumption of  
Canadian  
coal**

A report issued by the Dominion Bureau of Statistics on "Coal Statistics for Canada for the Calendar Year, 1932," calls attention to the recent increase in the home market for coal produced in Canada. "The research work done by the Federal Department of Mines on the coking of Canadian coals from both eastern and western deposits has resulted in an increase in consumption of Canadian coal for the manufacture of coke at Winnipeg and Montreal. The Saskatchewan coal operators have succeeded in increasing their sales by large scale stripping and open cut methods of mining which have reduced costs. Although British Columbia's coal output de-

clined in 1932, the coal operators in that province are apparently capturing a larger share of the available market than in previous years."

Imports of coal into Canada have declined sharply during the past two years. In 1930, Canada imported 18.8 million tons, in the following year 13.5 million tons, and in 1932 only 11.7 million tons. Despite this decline in total coal imports, anthracite receipts from Great Britain advanced 59.6 per cent. Importations of anthracite coal from the United States, on the other hand, decreased 24.6 per cent.

**"Civil works"  
for relief of  
unemployment  
in U.S.A.**

During November, President Roosevelt approved a plan for "civil works," designed to secure the participation of local bodies in the work of relieving unemployment. The new program originated in a meeting of State governors, mayors, engineers and relief administrators, held at Washington in the same month to discuss the best method for providing jobs instead of doles during the present winter. It was considered that former plans of work relief had generally resulted in a compromise, being neither true work nor true relief. The new plan is described in the *Survey* (New York), December, 1933, in an article by Russell H. Kurtz, of the Russell Sage Foundation. The writer represents its sponsors as outlining their plan as follows:—

"Let us take all the actual and potential public-work relief jobs in the country, and weave them together into a huge employment program under federal control. To finance them, we will divert \$400 million from the unexpended balances of the Public Works' Administration, \$100 million from the Federal Emergency Relief Fund and seek to enlist \$200 million or so more from state and local public funds. To avoid confusion with the operations of the Public Works Administration, and because of their different nature, we will call these projects Civil Works. To share in Public Works Administration funds, they must be under federal control, but in the interest of speed, diversity and local participation they should be prosecuted by local bodies. The way to achieve that is to put the whole show in the hands of the Emergency Relief Administrations, federal, state and local. But we must avoid the mistakes made in our local work-relief experience. Wages must be adequate to provide sufficient income to take these people entirely off the relief rolls. In fact, we will have to pay them the P.W.A. scale of wages

or the whole set-up will fail to qualify for a P.W.A. appropriation. Furthermore, we will be wise to make the program large enough to include as many as possible of the unemployed who are not on relief, for they are the real forgotten men of this situation."

**Proposed  
Medical Code  
for industry  
in U.S.A.**

A medical code for industrial employers has been presented in outline to the National Recovery Administration in the United States by the American College of Surgeons. Its general principles include the proposal that all industrial medical clinics be requested or required to conform to specified standards; that all new employees should have pre-employment examinations, and all employees annual health audits by the physician and surgeon employed by the industries; that industries establish individual or joint pathological and X-ray laboratories; that defects revealed by examinations be cared for by the industry in so far as they come within the scope of workmen's compensation or other state laws, and otherwise be referred to the family physician of the employee, who should be provided with the records and facilities of the industrial laboratories at minimum cost; that in so far as is possible, the facilities of the laboratories should be available to the family physician for the care of the families of employees and the medical department of the industry should correlate with him in making a diagnosis; that industries should utilize hospitals which are properly equipped and standardized, and that these hospitals should be used as far as feasible as health centres where physical examinations may be made.

**Proposed board  
to control  
cotton industry  
in Great  
Britain**

The *New Statesmen and Nation* (London), in its issue of December 16, outlines legislation to be proposed by the trade unions concerned for enactment by the Parliament of Great Britain, providing for the establishment of a statutory Cotton Control Board, as follows:—"The cotton trade unions have drawn up, in collaboration with the Trades Union Congress, and presented to the employers, a complete scheme for the control and reorganization of the cotton trade. Under this scheme it is proposed that there should be set up a Cotton Control Board, with full power to close down or amalgamate businesses, and to take entire charge of the marketing of cotton goods, as well as of research and other activities in the interests of the trade as a whole. The unions propose

that the membership of this Board should, with the exception of a chairman chosen by the Government, be appointed wholly from the industry—employers and workers in equal numbers—and from the merchant interests. They want it to have power, when a collective agreement has been made, to declare it binding upon the entire trade. In order to reinforce the Board's authority, they want every firm in the industry to hold a licence, which the Board will be empowered to take away if any firm violates an agreement, or for certain other causes. They want licences to be issued in the first instance to all existing firms; but they propose that the licensing system shall be used to restrict the entry of new firms into an industry in which productive capacity is already far in excess of market demand."

The Dominion Bureau of Statistics has recently issued a summary report entitled, "The Manufacturing Industries of Canada, 1931," giving the results obtained by the Census of Industry for that year. Statistics of manufacturing in Canada in 1931 were given in the review of the Census of Industry reports which appeared in the *LABOUR GAZETTE*, September, 1933, page 955.

On November 7, 1933, the State of Ohio, by referendum, adopted old-age pension provisions applying to persons 65 years of age. Laws providing for old-age pensions are now in effect in 26 of the 48 States. Of these, 12 were passed in 1933. In 13 of the States the applicant must have reached the age of 70. In one State 68, in the remaining 12 States, 65.

During the month of December a total of 2,893 accidents were reported to the Ontario Workmen's Compensation Board in the industries in Schedule 1 of the Act, 19 of which were fatal accidents; in Schedule 2 industries 190 accidents were reported, including 7 fatal cases; and 338 accidents to employees of the Crown, 4 of which were fatal, were reported during the month, making in all 3,421, of which 30 were fatal.

An increase in both frequency and severity rates for accidents in manufacturing industries in 1932, as compared with 1931, is shown in the annual survey of the United States Bureau of Labour Statistics. The average number of workers injured in 1932 was 19.55 per 1,000,000 hours worked, as against 18.85 in 1931, and the average time lost through such injuries in 1932 was 2.86 days per 1,000 hours worked, as against 2.59 in 1931.

## RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

THE Board of Conciliation and Investigation established on October 25 to deal with a dispute between the British Columbia Electric Railway Company, Limited, and certain of its employees forwarded its findings to the Minister of Labour on December 30, 1933. The employees concerned in this dispute, 1,400 in number, are members of the Amalgamated Association of Street and Electric Railway Employees of America, Divisions Nos. 101 (Vancouver), 134 (New Westminster), and 109 (Victoria). The dispute was occasioned by the employees' refusal to accept a 10 per cent wage reduction when a three-year agreement under which they had been working expired on September 30, 1933, this reduction being in addition to a 5 per cent decrease mutually agreed upon on December 1, 1932, making a total reduction of 15 per cent from the basic rates specified in the 1930 agreement. The personnel of the board was as follows:—His Honour Judge J. N. Ellis, of Vancouver, chairman, appointed by the Minister in the absence of a joint recommendation from the other board members, Mr. A. G. McCandless and Dr. Lyle Telford, both of Vancouver, nominated by the company and employees, respectively. The report of the board was signed by the chairman and Mr. McCandless and recommended that, effective January 16, 1934, wages of the employees concerned should be reduced 5 per cent in addition to the 5 per cent decrease already agreed to on December 1, 1932, i.e., a total reduction of 10 per cent from the basic rates provided in the agreement entered into three years previously. The board also recommended that wage rates for operators of one-man cars should be five cents per hour more than the rate for motormen and conductors on two-men cars. Dr. Telford did not concur in these findings and submitted a minority report. The texts of the two reports are given below.

Two applications for the establishment by the Minister of Labour of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act were received in the Department of Labour on December 30 from the Canadian National Telegraphs, one relating to a dispute with its telegraphers, clerks and installers, numbering approximately 1,300, and the second

to a dispute with 125 employees being climbers, groundmen and cooks employed on telegraph construction and maintenance gangs. An application was also received on the same date from the Canadian Pacific Railway with reference to a dispute with its commercial telegraphers and clerks, approximately 900 in number. The employees in each instance are members of the Commercial Telegraphers Union of America. All three disputes relate to the employers' proposal to make a deduction of 15 per cent from wages calculated on existing basic rates of pay, i.e., a deduction of 5 per cent in addition to the 10 per cent deduction already in effect. The applications were under consideration at the time of going to press.

The December issue of the *LABOUR GAZETTE* contained, at page 1151, the text of the report of the Board of Conciliation and Investigation which dealt with a dispute between the Canadian National Railways and its clerks, freight handlers, etc. (system and headquarters); also crew of car ferry ss. *Charlottetown*, and wharf employees at Halifax, N.S. The report was signed by the Honourable Mr. Justice Louis Cousineau, chairman, and the Reverend Russell McGillivray, the member nominated by the employees, and recommended that, effective for one year from December 1, 1933, a deduction of 15 per cent should be made from the basic schedule rates of pay of the employees concerned (i.e., 5 per cent deduction in addition to the 10 per cent deduction already in operation, with the proviso that such deduction should not apply to the compensation of any employee now receiving \$85 or less per month, or operate to reduce below that amount the compensation of any employee now receiving \$85 or more per month. The Department was advised by the railway management on December 7 that it was unable to accept the exemptions included in the recommendation of the board, but that, "tentatively, pending negotiations with a committee of employees representing the employees, the railway will apply from December 1 a further 5 per cent deduction from each employee's pay cheque calculated on existing basic rates of pay for all employees embraced by the schedule."

## Report of Board in Dispute between the British Columbia Electric Railway Company and certain of its Employees

IN THE MATTER of the *Industrial Disputes Investigation Act* and in the matter of a dispute between *British Columbia Electric Railway Company Limited* and certain of its employees, being members of the *Amalgamated Association of Street and Electrical Railway Employees of America, Divisions Nos. 101 (Vancouver), 134 (New Westminster) and 109 (Victoria), British Columbia.*

THE HON. WESLEY A. GORDON, K.C., M.P.,  
Minister of Labour,  
Ottawa.

SIR,—The Board of Conciliation and Investigation, appointed to inquire into a dispute between British Columbia Electric Railway Company Limited and certain of its employees as above recited, met in Vancouver, Tuesday, November 21, to meet the parties to the dispute.

The Board was composed of His Honour J. N. Ellis, appointed by the Minister of Labour; Mr. A. G. McCandless of Vancouver, nominated by the Railway Company; and Dr. Lyle Telford of Vancouver, nominated by the employees.

The Company was represented by Mr. W. G. Murrin, Manager; Mr. William Saville, and Mr. E. W. Arnott.

The employees were represented by Mr. H. W. Speed, Chairman of the Advisory Board; Mr. F. E. Griffin, President of the Vancouver Local; Mr. A. B. Lofting, Secretary of the Vancouver Local; Mr. A. J. Bond, Business Agent of the Westminster Local; and Mr. J. B. Torrence, President of the Victoria Local.

Formal sessions were held on November 21, November 28, November 30, December 11, December 12, December 18, December 20, December 21, December 22 and December 28.

At the meeting held on November 28, representatives of the men asked for an adjournment in an endeavour to see if a settlement could not be arrived at. This was agreed to, and the adjournment took place until November 30. On that date the employees asked for a further adjournment to continue their endeavours to arrive at a friendly settlement. This was agreed to, and the Board adjourned until December 11. On the reassembling of the Board on that date, it was stated by Mr. Speed, representing the employees, and Mr. Murrin, on behalf of the Company, that both sides had found it impossible to arrive at an agreement, and the proceedings were continued.

The dispute in this case is well defined and arose out of the request made to the employees to accept a reduction of ten per cent in their wages. The employees are working under an agreement entered into three years ago and which expired on the 30th of September, 1933. The agreement has been modified by a reduction of five per cent in the wage rate since December 1, 1932. This reduction was mutually agreed upon between the company and the employees. The Company now proposes a further reduction of ten per cent in wages, or the equivalent of fifteen per cent from the basic rate contained in the original agreement. The employees declined to agree to any further reduction.

During the hearings of the Board, requests for proposed changes in the working conditions were made both by the Company and by the employees.

Every facility was accorded both sides to place before the Board evidence, data, facts and argument to support their respective contentions. The Board views with great satisfaction the thorough and painstaking care with which both parties presented their submission. Both oral and written evidence was presented, and throughout all the sittings a friendly and frank manner was evidenced by both sides. The subjects under discussion were exhaustively dealt with and presented in a very intelligent and able manner.

The Company produced in evidence a number of charts dealing with the cost of living in different centres of Canada and comparisons between the wages paid in Vancouver and those paid by other street railway companies operating both in Canada and the United States.

During the hearing, the Company asked that the clauses in the agreement respecting the extra rate paid to the employees on Sundays and holidays be abrogated, and the same rate of wages be paid on these days as on other days.

Also that the clauses of the agreement relating to "spread-over" be amended so as to reduce the penalties payable by the Company under these clauses.

The Company also requested that clause forty-four of the agreement, relating to guarantee of twenty-six working days per month for freight train crews be amended, as they stated that there were several months in which twenty-six working days did not occur.

The request was further made by the Company that the clauses relating to monthly minimum guarantee for extra men be modified by reducing the amount of the guarantee.

It was also requested that the time allowed for making out accidents reports be reduced from fifteen minutes to ten minutes.

They further asked that the thirty minutes allowed for meals to Interurban train crews should be paid for at straight time and should not count in calculating overtime.

The Company also requested that the allowances for reporting time at New Westminster Car Barn and Depot should be reduced. A minor change was also asked by the Company in connection with the posting of the running sheets.

These requests of the Company were all opposed by the employees and they themselves asked for a few amendments in the agreement and their working conditions, notably, a request that all motormen and conductors as well as bus operators on the regular runs be allowed every sixth day off, instead of one day in eight as now provided.

The further request was made by the employees that clause 24 (a) be amended, dealing with the reporting time of the men.

The men further requested that the men operating busses be included in the agreement, and that their basic rate shall be the same as paid to one-man-car operators, and that the licence fee necessary to the operation of the busses be paid for by the Company and that all bus operators shall be covered by the same working conditions as apply to city platform men.

The men further asked that a new clause be inserted in the agreement allowing the employees an annual vacation of two weeks with pay and that Remembrance Day be included in the list of public holidays.

The Board is of the opinion that some of the working conditions in the present agreement are unduly onerous upon the Company, but we do not consider it advisable at the present time to recommend any of these changes as suggested either by the Company or the employees, and therefore, confine our recommendations solely to the reduction in wages and the pay to men operating one-man cars.

The Company contended that there had been a decrease in the cost of living during the last three years of approximately thirty per cent;

That the wage rates paid by the Company were high as compared with corresponding wages paid by other Companies in Canada;

That considerable reductions in wages had taken place in Vancouver and throughout Canada during the past three years;

That the Company's employees enjoyed exceptionally favourable working conditions and concessions;

That there had been a serious decline in the traffic and revenue of the Railway as compared with three years ago.

The men opposed any further reduction in wages for the following reasons:

That a reduction in wages would lower their standard of living and would be detrimental from the public point of view;

That they had voluntarily accepted a five per cent reduction in December, 1932, ten months before the agreement expired;

That they were voluntarily taking one day off in six instead of one day off in eight, so that a number of men might be employed who would otherwise have been laid off;

That wages generally on this continent are being increased at the present time and that the cost of living is rising;

That the Company was financially in a sound position and that its dividends should be reduced before wages were reduced.

The Board has carefully considered all the evidence placed before it and has taken into consideration the reduced cost of living expenses as compared with those which prevailed at the time the agreement was entered into and the present wage scale established, and the wages paid by the Company as compared to the wages paid by other companies operating both in Canada and the United States, and the serious falling off in the revenue of the Company.

The Board is satisfied that the request of the Company for a reduction is justified at the present time and that some effect should be given to it, and that the employees may be reasonably asked for a time to accept a lower rate of wages.

The Board, therefore, recommends that commencing on the 16th day of January, 1934, the wages of the employees who are concerned in this investigation be reduced ten per cent on the basic rate as in effect in the agreement entered into three years ago; that is, a reduction of a further five per cent in addition to the five per cent agreed to by the men as hereinbefore stated.

The Board in not fixing any date as to how long this reduction should last, believes that at the present time and in the interests of both the Company and the men the reduction should begin as and from the 16th day of January, 1934, leaving both the Company and the employees untrammelled to mutually alter the wage scale at some future time if economic conditions so justify.

The Board also recommends that the rate of wages paid to the men operating "one-man" cars shall be five cents per hour more than the rate for motormen and conductors on two-men cars.

Respectfully submitted,

(Sgd.) J. N. ELLIS,  
Chairman.

(Sgd.) A. G. McCANDLESS,  
Company's Representative.

Vancouver, B.C., this 30th day of December,  
A.D. 1933.

### Minority Report

To the Honourable the Minister of Labour,  
Ottawa.

SIR,—Unfortunately, I cannot concur in the majority findings of the Board, and I herewith give my reasons.

The Company in this instance is asking for a further ten per cent reduction in the employees' wages, which would make a total reduction of 15 per cent from the base rates contained in the agreement.

The Company claims that since there has been a definite reduction in the cost of living, the wage-reduction suggested will not work hardship upon the men. The Company claims that wages, for employees engaged in the same class of work in other districts, where companies operate these services, are less than the wages paid here. The Company further claims that their earnings have been so reduced in amount that they are unable to pay the present wages, or to allow the better working conditions to remain as they are now.

I will deal with the first of these claims: the reduced cost of living. There is sufficient evidence at hand to prove that the cost of living is now commencing to rise. And with the beginnings of currency inflation. I think we should hesitate before allowing this alleged low cost of living to play too great a part in our decision. Though it may be admitted that the cost of living has been down, we must remember that as costs rise again due to the inflation of currency, they rise very rapidly. Then again, once wages have been lowered, it is a fact that they always lag far behind the rising cost of living in their ability to increase again. And since it is upon their wages that the workers have to depend for the means of life, wages are an item that must be jealously guarded in the interests, not only of the men and their families, but of the whole community. It should be borne in mind that the bodily needs of the individual are of such a nature as to require daily fulfil-

ment; that they cannot wait indefinitely, or for that matter, even for a few days, or until readjustment can be made in accordance with changed conditions.

Until every precaution is taken to provide for such readjustment, I am opposed to any reduction in wages. And I am insistent upon this point in view of the before-mentioned fact, namely: that there is a definite trend towards increased prices at the present time.

Now regarding the second claim made by the company; that the wages paid here are much greater than those paid elsewhere for a similar class of work.

I would like to point out in this connection that every effort to avoid comparison with all municipally owned and operated street-railways, was made by the company. But since the work is similar, as far as the men are concerned, regardless of whether the business is privately owned or municipally owned, I believe that municipally owned companies should have been taken into account impartially. The comparison might tend to show that though other things appear equal, as between privately-owned and municipally-owned utilities, the city taxes may be lower in the latter case. And taxes are an important factor in the consideration of living costs.

Again, since it is generally admitted that all human beings who make their contribution to the welfare of society are entitled to at least a civilized standard of living regardless of who may employ them—it should be obvious that if private corporations cannot comply, there should be a social obligation to assume the difference.

Since the B. C. Electric Railway Company is a definite public utility corporation, enjoying a monopolistic advantage—a protected position—it therefore is responsible to a greater degree than would ordinarily be the case, to see that its employees are assured of a civilized standard of living.

Their comparison with other cities with a lower standard of living is hardly commendable. There would appear to be no reason why they should not carry their comparison to its logical finality, and ask the men to accept the lowest standards existent in other parts of the world.

I would suggest that we here in this part of Canada have the essentials of life in abundance, and hence there is no real reason why any of our workers should be asked to subsist on less than the country can afford.

If the inability to provide a civilized standard of living lies with the company, then obviously the men should not be made to suffer; if the fault lies elsewhere, and can be

attributed to the general social economy, or certain aspects of it such as the monetary system, or the practice of private ownership of utilities, then something should be done about the matter. We should not continue to compromise with these evils.

Now in regard to the third reason given by the company for a wage-reduction: inability to continue to pay the present wages.

In this connection, I feel very strongly. I do not think that the evidence necessary to enable the Board of Conciliation to judge on the merits of this claim, was forthcoming.

Mr. Murrin stated that it would require some months to gain the necessary information, and an expenditure of perhaps \$500,000 to do so. I cannot accept this statement at its face value. I am inclined to believe that a definite effort has been made so as to render access to the true financial position out of the question, particularly for the Conciliation Board. And this fact alone, to my way of thinking, makes the findings of the board, in favour of the company, out of all reason.

It is not until we have the complete information in this connection that any reliable finding can be made. Should the company really be enjoying a favourable financial position, there is no reason why the employees should be further deprived.

The Company has consistently placed in its reserve account for depreciation and renewals, not less than \$1,800,000 annually for the last five years. While this may be, and undoubtedly is, excellent financing, it hardly seems reasonable that any shortcoming in the line of revenues should first and foremost be detrimental to the employees, while the Reserve account remains untouched, as though it were a sacred entity. I believe it should be used to tide over such exigencies as the present. And certainly, until a very definite curtailment has been made in this regard, wages should not be touched.

Again, Mr. Murrin suggested that it is customary to base all dividends upon the valuation of the property. With this argument, I am in most decided disagreement. First, I would contend that only the actual cash which has gone into the construction of the assets of the company, has any right to financial returns. In other words, it is my claim that no dividends on watered stock should be tolerated if there is really a question of having to reduce wages. I am convinced that there are millions and millions of dollars of watered stock in this company, upon which dividends have been, and are being paid. Mr. Murrin refused to give evidence to the contrary.

Furthermore, though it might be legitimate to pay dividends on the valuation of the property, the valuation should be that of the present time, not that of a prosperous period. It should be upon the actual valuation at the present time, under the present economic conditions. The company, however, is asking that the living standard of its employees be lowered, and in this case, it bases its reasons upon the alleged living costs of to-day.

Further in connection with the earning capacity of the company, I can only infer, but I believe, with every justification, that this has been very high. Whenever the stock of this company has been offered to the public, it has been taken up very rapidly. Now obviously, this does not occur with non-dividend paying stock. On the face of things, does it not look as though the company expects to receive the bulk of the prosperity in good time, and in bad times, to suffer none of the deficiency—rather, the men are to be asked to shoulder this burden.

I would also like to point out that there has been no drop in the price of B.C. Electric money as yet. The Company still charges for the use of money the same as ever. And the car-fares remain the same. Why should the wages of their money be protected by sacrificing the wages of their employees?

Another point: if a loss must be borne by one group, it should be borne by other groups, and in like proportion. No evidence was forthcoming, however, to enable us to say whether other groups—for instance, the managerial staff or such directors as may be receiving salaries, have also had a reduction to the extent that is being demanded of the street-car employees.

Furthermore it should be remembered that a 10 per cent reduction to an employee receiving say \$1,000 per month is hardly to be compared in effect with a 10 per cent reduction to a man receiving \$125 per month. The latter means a definite lowering of the basic standard of existence, a cut in the actual necessities, while the former means only the giving up of what may now be called superfluous luxury, or perhaps a decreased savings account.

Surely the basic civilized standard of living should never be reduced until all those in the higher brackets have been materially reduced. I have no evidence whatever that this had been done.

#### *Regarding the Nature of the Work*

I would like to remark that there has been evidence of a marked speeding-up in the work of these employees of late. All this entails extra nerve-strain. Effort is being

made by the company, and rightly so, to reduce accidents to a minimum. The strain falls upon the men. Every accident, no matter how minor, has to be reported. The slightest error on the part of the employee in charge may result in his dismissal, or a reprimand of such a nature as to cause him to lose time with a resultant loss of income for himself and his dependents.

After years of working at this occupation, a man is more or less unfitted for going out into the world to earn a livelihood in any other occupation.

Again, there is a monotony about the work that should be relieved by occasional holidays. And the request of the men for two weeks' holiday with pay, is not an unreasonable request. There are many qualified men at present unemployed, and so the present is an opportune time for the inauguration of such a plan. It would help to relieve the unemployed situation, though ever so little, and it would help the employees. Once again, I would remind the company that they are a semi-public body, and they have some moral obligations in these matters.

The men have requested one day off in six, instead of one day off in eight. The men voluntarily agreed to the present arrangement at a loss to themselves. They did so in order to provide for twenty men who otherwise would have been unemployed. The men's action in this regard is most commendable. Rather than see others suffer, they were willing to share, even out of their meagre wages. I cannot help but feel that the company would be well-advised to follow in their footsteps. And after all, the company has enjoyed considerable monopolistic privilege in this province, such as should make them feel morally obligated to follow such a course.

A request has been made by the men that the bus drivers be included in their agreement with the company. They claim, and I believe rightly, that these men are simply operating a slightly different type of equipment. Otherwise their work is identical. In the future is it not likely that more men will be so engaged; hence for these reasons, the bus drivers should be included in the agreement with the company.

Regarding the matter of the guaranteed number of working days per month; it looks to me as though this should correspond with the *actual* number of days—working days per month—and not one day more.

In my opinion, special consideration is due to the drivers of "one-man" cars—more than the company at present chooses to grant. A considerable amount of extra work is encum-

bent upon these men. It is true that the "one-man" cars are specially equipped, but they are more complicated nevertheless, and not every man can run them. Aside from the actual operation of the car, and the responsibility attendant upon such a function in present-day traffic, which is so much speeded-up, this one man has the responsibility of attending to all records for each trip, tickets, refund slips, duplicates, transfers, pass records. He is responsible for all equipment, for lost parcels, etc. And at the time of an accident, his responsibility is double that of the ordinary motorman; he is without the assistance of a conductor, and so it is much more difficult for him to establish his claim.

. . . . .

In the case of illness, the employees are unable effectively to provide for themselves or their dependents. Matters such as taxes, clothing, education, are entirely passed by. It was not shown, nor can it be, that the men—even with their present wages—can make provision for any advanced education for their children. And of late the cost of education has been going up.

. . . . .

The company made mention of the loaning privilege enjoyed by the men. I cannot deny that this is a help, but I am obliged to point out that the company's motive is not philanthropy. The company enjoys a reasonable rate of interest.

### *Effect on the Community as a Whole*

I am strongly of the opinion that any wage-cut at the present time will work great hardship upon the people generally. It will mean that further effective purchasing power is removed from the market. At a time when it is exceedingly important to keep as much effective purchasing power in operation as possible, the result of a further reduction in the wages of the company's employees, means a decided loss to the business of this district.

### *Summary*

To sum up: Considering the fact that the cost of living is again commencing to rise, and that the low cost of living which may have been enjoyed during the past three or four years, was enjoyed to a greater extent by the collectors of company dividends than by company employees;

Considering the fact that proportionately, the employees of this company did not enjoy the tremendous profits accruing to the company in "good" times, (which profits had the effect of making even "watered" stock highly

marketable); and therefore, the men had infinitely less chance to make provision against future emergency than had the collectors of dividends;

Considering the fact that the Conciliation Board has not been given access to such information regarding the financial condition of the company as would enable it to say with any reasonable degree of certainty what the actual earnings of the company have been, the manner in which earnings have been

disbursed, etc. I do suggest that there should be no reduction in the wages of the men, and no change in their working conditions. And these considerations apart, I would suggest that until the wages of money—either in the form of dividends or interest—be decreased, there should be absolutely no question of a decrease in the wages of the company's employees.

Respectfully submitted,  
(Sgd.) J. LYLE TELFORD.

## CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

### Summary of Recent Proceedings

**F**IVE new decisions were given recently by the Canadian Railway Board of Adjustment No. 1. Earlier decisions were outlined in the *LABOUR GAZETTE*, September, 1933, page 897 and in previous issues; and the fifth report of the proceedings of the Board, covering the period from October 1, 1930, to September 30, 1933, was issued as a supplement to the issue of December, 1933.

The Board was established under a voluntary agreement concluded in 1918 between the various railway companies and certain of the railway organizations, its original purpose being to secure uninterrupted service on the railways during the continuance of the war. It has power to determine all differences arising between the railway companies and members of any of the six railway brotherhoods, "including the interpretation of wage schedules or agreements, having due regard to the rights of the several classes of employees and of the railways respectively."

The Board consists of six representatives of the railway companies and six representatives of labour, one for each of the following railway brotherhoods: the Brotherhood of Locomotive Engineers; the Brotherhood of Locomotive Firemen and Enginemen; the Order of Railway Conductors; the Brotherhood of Railway Trainmen; the Order of Railroad Telegraphers; and the Brotherhood of Maintenance of Way Employees and Railway Shop Labourers.

#### Case No. 420—Temiskaming and Northern Ontario Railway Commission and Order of Railway Conductors and Brotherhood of Railroad Trainmen.

The employees claimed that under established rules and practices, three brakemen should be assigned to a mixed train in Northern Ontario, running 70 miles each way on the main line; and also to all other mixed trains assigned to run over fifty miles on the

main line. They asked the Railway to appoint a third brakeman on the ground that the rule in the Schedule of June 1, 1914, contained the provision: "Way-freight trains . . . will have at least three brakemen on runs of 50 miles or over." The Railway declined to appoint the third brakeman, as requested, on the grounds that the rule requiring three brakemen applied to way-freight trains only, and did not apply to mixed trains; and that the appointment was not justified on the basis of work performed, established practices, or schedule rules. Further, it was claimed that in all mixed train assignments it was the privilege of the railway to decide whether two or three brakemen should be used.

The Board found that the Schedule of Rules governing the service of conductors and trainmen did not require the assignment of three brakemen on mixed train service. The claim of the employees was denied.

#### Case No. 421—Canadian National Railways (Atlantic Region) and Brotherhood of Locomotive Engineers and Brotherhood of Locomotive Firemen and Enginemen.

An engineman and a fireman were ordered for a "turn-around" trip from Moncton to Springhill Junction (65 miles). On arrival at Moncton round house they were required to take a relief engine for a train for Halifax which had broken down at a point 21 miles distant, and while en route the engineer received a message from the Superintendent instructing him to return the disabled engine to Moncton from the point of the breakdown. The two employees submitted time tickets claiming 458 miles, whereas they only received 110 miles, making a difference of 348 miles, for which they claimed compensation. Their claim was based on Article 40, clause F of the Engineers' Schedule and Article 40 clause G of the Firemen's Schedule which read:

"Men assigned to regular runs will be entitled to any engine placed on the run; except in case of engine failure when they will follow their engine to terminal."

The Railway stated that the crew had been paid for 100 miles road time under Article 7, clause A of the schedules, plus 10 miles initial and final terminal "arbitraries." The Railway contended further that while the schedule provided as quoted above, no provision was made for penalty payments where that rule was not observed.

Under the circumstances of the case the claim of the employees was sustained by the Board.

**Case No. 422—Canadian National Railways (Western Region) and Order of Railway Conductors and Brotherhood of Railroad Trainmen.**

A dispute arose as to the method of paying crews on inter-divisional runs for work done at intermediate terminals. This question involved the interpretation of Rule 9, Clause (a) of the Conductors' Schedule and of Rule 12, Clause (a) of the Trainmen's Schedule. The employees' representatives submitted that those rules provided for terminal payments (in addition to pay for the trip) for all switching operations made at terminal points, and that there were no restrictions as to the nature of the switching operations to be paid for at such points. The contention of the Railways was largely based on the decisions of the Board in Case No. 402 (LABOUR GAZETTE, November, 1932, page 1163). In that case the Board had considered that certain services rendered by a passenger train crew did not constitute switching, as claimed by the employees.

In the present case the Board decided that they were not in a position to deal with the application of schedule interpretations except in specific cases in which the principles involved and in dispute were clearly demonstrated under the conditions applicable to them.

**Case No. 423—Canadian National Railways (Central Region) and Order of Railway Conductors and Brotherhood of Railroad Trainmen.**

On February 1, 1933, the company reduced the number of yard shifts employed in Allendale Yard, road crews being called on to perform service previously performed by yardmen. The employees contended that this was contrary to Article 140 of the current schedule which reads in part as follows:—

"Switching, transfer and industrial work, wholly within the recognized switching limits,

will, at points where yardmen are employed, be considered as service to which yardmen are entitled, but this is not intended to prevent trainmen from performing switching incidental to their own train or assignment."

In the present case, way-freight and mixed train crews were required to perform yard and industrial switching previously done by the yard assignment, and the employees claimed that the effectiveness of the above rule would be destroyed if it were to be interpreted so as to permit such a practice. They contended, first that the Company should not be permitted to reduce yard crews; and second, that if they do so and require roadmen to perform regular yard service, the road crews should be paid a minimum day at yard rates and conditions.

The Company pointed to the serious decline of traffic, which forbade the continuance of one of the yard shifts. They contended that Article 140 (above quoted) permitted the practice of requiring trainmen to perform switching incidental to their own train or assignment at points where yardmen are employed, and that consequently the road trainmen in question were not performing work to which yardmen were exclusively entitled. The Company claimed further that their right to change assignments according to changes of conditions was well recognized, provided the new assignments were not incompatible with schedule rules.

It developed at the hearing that train crews were required to perform industrial switching that was not incidental to their respective trains; and the Board decided that, in view of the evidence, road crews should not be required to perform service at Allendale to which yardmen are entitled under Article 140.

**Case No. 424—Canadian National Railways (Western region) and Brotherhood of Railroad Trainmen.**

An extra train, pushing a snow plough, was run from Belmont to Brandon, a distance of 42 miles, without a train crew, the assistant superintendent taking charge. The employees stated that two train crews requested to be allowed to handle the plough extra, but were refused; and they claimed payment for 100 miles for each member of one of the available crews. The Company detailed the circumstances under which the assistant superintendent had taken charge, and contended that the employees' claim was not in accordance with the schedule, as the conductor on whose behalf the claim was made was on an assigned run, and actually went out on his run six hours after the plough extra left Belmont; moreover, this conductor was paid the full

monthly guarantee for his assigned run during that month.

It developed at the hearing that the assignment in which the conductor and his crew were engaged involved the payment of a premium, and that even if the crew had been called on the occasion in question the earnings

of the employees for the month would not have been increased over the amounts actually paid to them.

The Board decided that the agreement required that a snow plough extra out of a terminal under such conditions as stated in this case should have a train crew.

## STRIKES AND LOCKOUTS IN CANADA DURING DECEMBER, 1933

THE following table shows the number of disputes, workers involved and time loss for December, 1933, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Dec., 1933..	14	4,098	49,653
*Nov., 1933..	20	3,974	49,543
Dec., 1932..	12	2,854	9,146

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

The number of strikes and lockouts recorded for December was substantially lower than that shown for November. The number of workers involved and the time loss incurred, however, showed very little change due largely to the expansion during December of the disputes involving pulpwood cutters in Northern Ontario and Quebec, and to a strike of woollen factory workers in Hespeler, Ont., in which 700 workers were involved for a time loss of 10,000 man working days. As compared with December, 1932, the number of strikes and lockouts recorded was slightly larger, while the number of workers involved was almost twice as great and the time loss over five times that recorded for the same month last year.

Seven disputes, involving 2,994 workers, were carried over from November, and seven disputes commenced during December. Of these fourteen disputes, thirteen terminated during the month, six being in favour of the employers involved, three in favour of the workers concerned, compromise settlements being reached in three cases, while the result of one dispute is recorded as indefinite. At the end of December, therefore, there was one dispute in progress recorded as a strike or lockout, namely: boys' clothing factory workers, Toronto, Ont.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information had been received indicating that employment conditions are no longer affected, but which the unions concerned have not declared terminated. Information is available as to four such disputes, namely: photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; lithographers, Toronto, Ont., April 15, 1932, one employer; and composers, Winnipeg, Man., March 13, 1933, one employer. The dispute of motion picture projectionists employed by one firm in Winnipeg, Man., commencing February 28, 1932, and carried in this list for some months, was called off by the union by the end of the year.

A dispute involving pulpwood cutters at Stave Falls, B.C., about December 20, demanding an increase in wages was reported in the press, but particulars had not been received in time for this issue.

A strike involving fifteen workers in a chemical establishment in Toronto, Ont., for about two weeks early in December, an increase in wages being secured, has been reported in the press. Detailed information as to the dispute has not yet been received.

Disputes involving men on unemployment relief work, who are not paid wages but receive subsistence for which work is performed or may be required, are not included

in the record, as no relation of employer and employee is involved.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

**PULPWOOD CUTTERS, THUNDER BAY DISTRICT, ONT.**—On December 15, as the result of a conference called by the Mayor of Port Arthur, a settlement was reached in this dispute, which commenced on November 1 and involved pulpwood cutters, tie cutters, etc. An agreement was signed between those operators who were members of the employers' association and representatives of the workers, providing for the terms discussed in November, namely \$35 per month and board for men not on piece rates, chiefly teamsters, for piece workers, \$3.50 per double cord, with a charge of 75 cents per day for board, and recognition of camp committees. The operators who were not members of the employers' association offered substantially the same rates of pay

except the monthly rate of \$35, maintaining a minimum of \$26 per month for men with little experience. Work was resumed generally on December 18. The terms of the agreement appear elsewhere in this issue. A number of the strikers arrested on charges of assault, unlawful assembly and riding on trains without paying fares were convicted and sentenced, being fined or imprisoned, some to be deported on the expiration of their sentences.

**PULPWOOD CUTTERS, COCHRANE DISTRICT, ONT.**—A number of the employees in the camps of one company ceased work on November 13 demanding that monthly rates of pay be increased from \$20-\$30 to a flat rate of \$35, that hours be reduced from ten per day to nine, that piece rates be increased from 2½ cents and up per sixteen foot log to five cents straight, that board be reduced from 90 cents per day to 75 cents and that camp conditions be improved. The employer offered a scale of

#### STRIKES AND LOCKOUTS IN CANADA DURING DECEMBER, 1933\*

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
<b>(a) Strikes and Lockouts in Progress prior to December, 1933</b>			
<b>LOGGING—</b>			
Loggers, Thunder Bay District, Ont.....	1,500	18,000	Commenced Nov. 1, 1933, for increase in wages and reduction in board; terminated Dec. 15, 1933; compromise.
Pulpwood cutters, Cochrane Dis- trict, Ont.....	500	6,000	Commenced Nov. 13, 1933; for increase in wages, reduction in hours and board and recognition of camp committees; terminated Dec. 15, 1933; compromise.
Pulpwood cutters, Saguenay Dis- trict, P.Q.....	45	45	Commenced Nov. 27, 1933; for increase in wages; terminated Dec. 1, 1933; in favour of employer.
Pulpwood cutters, Rouyn Dis- trict, P.Q.....	800	9,600	Commenced Nov. 27, 1933; for increase in wages and improved working conditions; terminated Dec. 15, 1933; in favour of employer.
<b>MANUFACTURING—</b>			
<i>Vegetable Foods—</i>			
Bakery employees, Winnipeg, Man.....	6	18	Commenced Nov. 27, 1933; against discharge of worker and for restoration of bonus; terminated Dec. 4, 1933; in favour of workers.
<i>Textiles, Clothing, etc.—</i>			
Boys' clothing factory work- ers, Toronto, Ont.....	134	3,000	Commenced Nov. 3, 1933; for recognition of union and increased wages; untermiated.
<b>TRANSPORTATION AND PUBLIC UTILITIES—</b>			
<i>Other—</i>			
Cold Storage plant workers, Winnipeg, Man.....	9	135	Commenced Nov. 29, 1933; for increase in wages and recognition of shop committee and against discharge of workers; terminated Dec. 18, 1933; in favour of employer.

\* In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day in which working time was lost to an appreciable extent.

STRIKES AND LOCKOUTS IN CANADA DURING DECEMBER, 1933—*Concluded*

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
<b>(b) Strikes and Lockouts Commencing during December, 1933</b>			
<b>LOGGING—</b> Pulpwood cutters, Timmins District, Ont.....	140	2,000	Commenced Dec. 4, 1933; for increase in wages and reduction in board; terminated Dec. 20, 1933; in favour of workers.
<b>MINING, NON-FERROUS SMELTING AND QUARRYING—</b> Coal Miners, Nacmine, Alta..	127	381	Commenced Dec. 4, 1933; against discharge of worker; terminated Dec. 5, 1933; in favour of employer.
<b>MANUFACTURING—</b> <i>Textiles, Clothing, etc.—</i> Woollen factory workers, Hes- peler, Ont.....	700	10,000	Commenced Dec. 1, 1933; against change in working conditions and for increase in wages; terminated Dec. 31, 1933; in favour of employer.
Shirt and overall factory workers, Winnipeg, Man....	65	25	Commenced Dec. 4, 1933; against decrease in wages; terminated Dec. 4, 1933; in favour of workers.
<i>Other Wood Products—</i> Furniture factory workers, Neustadt, Ont.....	50	400	Commenced Dec. 1, 1933; for increase in wages and reduction in hours; terminated Dec. 11, 1933; in favour of employer.
<b>TRADE—</b> <i>Retail—</i> Teamsters, Winnipeg, Man....	9	36	Commenced Dec. 8, 1933; for increase in wages and recognition of union; terminated Dec. 12, 1933; compromise.
<b>SERVICE—</b> <i>Public Administration—</i> Teamsters, Ottawa, Ont.....	13	13	Commenced Dec. 20, 1933; for increase in piece rates; terminated Dec. 20, 1933; indefinite.

\$26 to \$35 with board for monthly men, three cents to five cents per stick according to timber conditions, reducing the rate for board to 75 cents per day and agreeing to remedy grievances as to camp conditions. A number of the strikers, about 250, were reported to have resumed work on these terms within a few days. Between 350 and 1,500 employees were reported to be involved, but apparently many did not cease work and the strikers picketed the camps and roads. A settlement was reached at the middle of December, the monthly rate being set at \$28 to \$35 with board, ten hours per day, the rate per single cord being raised from \$1.35 to \$1.50, and the rates per stick ranging from three cents to five cents, board being reduced to 75 cents per day. The company also agreed to recognize camp committees.

**PULPWOOD CUTTERS, SAGUENAY DISTRICT, P.Q.**—Approximately forty-five employees out of 500 ceased work on November 27, demanding an increase in the rates per cord and, being refused, left the vicinity within a few days.

**PULPWOOD CUTTERS, ROUYN, P.Q.**—Approximately 800 out of 2,000 employees ceased work on November 27 demanding increases in wages, monthly rates and piece rates, and improvements in camp conditions. The camps and roads were picketed and a number of pickets were arrested and charged with rioting, unlawful assembly and sedition. Some were committed for trial while others were convicted and given suspended sentences. The provincial government ordered an investigation as to wages and camp conditions. Work was resumed on December 16 on the same conditions as prior to the strike.

**BAKERY EMPLOYEES, WINNIPEG, MAN.**—As stated in the December issue of the *LABOUR GAZETTE*, this dispute called by the Food Workers' Industrial Union, was terminated early in December. The six bakers, drivers, etc., who had ceased work on November 27 demanding the reinstatement of one worker and the restoration of the free supply of two loaves of bread per day, returned on December 5, their demands having been conceded by

the employer. It was also agreed that in future work would be shared instead of staff being reduced and that union members only would be employed.

**COLD STORAGE PLANT WORKERS, WINNIPEG, MAN.**—This dispute was called off by the union on December 19, those strikers who had not already resumed work being replaced by the employer. Working conditions were unchanged, the plant continuing to operate as prior to November 29, when nine employees ceased work demanding a minimum rate of 40 cents per hour, recognition of a shop committee and the reinstatement of five workers who, it was alleged, had been discharged because of their membership in the Food Workers' Industrial Union.

**PULPWOOD CUTTERS, TIMMINS, ONT.**—Seventy-five pulpwood cutters employed by one firm operating in the vicinity of Timmins, Ont., ceased work on December 3, demanding an increase in wages, with board, from \$26 per month and up, to a minimum of \$35. On December 11, however, the number on strike arose to 140, 65 others having also ceased work. The dispute is recorded as terminated by December 15, the strikers having returned to work or been replaced at a rate of \$35 per month.

**COAL MINERS, NACMINE, ALTA.**—Miners employed in one colliery at Nacmine, Alta., ceased work on December 4, demanding the reinstatement of one worker who had been discharged for failure to follow instructions *re* timbering. The employer had stated that the worker in question could return on giving his promise to obey the mine official's instructions in future, and after two days the strikers resumed work, the discharged miner being reinstated on giving the required promise.

**WOOLLEN FACTORY WORKERS, HESPELER, ONT.**—Weavers, twenty-eight in number, ceased work on December 1, as a result of changes in working conditions alleged to reduce earnings on piece work. By December 7, spinners and others ceased work, demanding wage increases, a reduction in hours, recognition of union, the Textile Workers' Union of Canada. The establishment was picketed and was closed down by the management, this being declared by the union to be a lockout. In negotiations for a settlement the company offered increased wages for the night shift and some improvements in conditions, refusing union recognition. These terms were not accepted but on December 19, the factory was reopened. From time to time employees resumed work, five hundred having returned by December 27. At the end of the year the strike was declared

terminated. A number of the pickets were arrested on charges of obstruction, unlawful assembly, etc., and were remanded for trial.

**SHIRT & OVERALL FACTORY WORKERS, WINNIPEG, MAN.**—Sixty-five workers employed by one firm engaged in the manufacture of shirts and overalls ceased work on December 4, protesting against a new method of operation imposed by the employer on one section of the shirt factory which, it was alleged, would reduce the earnings of the ten workers in that section by fifteen per cent. The shop committee, composed of members of the Industrial Union of Needle Trades Workers, negotiated with the employer with the result that work was resumed in a few hours under the conditions prior to the dispute.

**FURNITURE FACTORY WORKERS, NEUSTADT, ONT.**—Claiming that their employer was paying lower rates than in other furniture factories, some fifty members of the Chesterfield and Furniture Workers' Industrial Union employed in one furniture factory in Neustadt, Ont., ceased work on December 1. The employer stated that wages in the factory ranged from 20 cents to 37 cents per hour for married men, on a fifty-five hour week basis, and that during discussions prior to the walkout he had offered rates twelve per cent higher than those in force. The employees, however, refused to accept this offer and ceased work, demanding an increase of thirty per cent in wages and a reduction in hours to forty-four per week. Pickets were placed about the establishment and negotiations between representatives of the parties concerned were held from time to time without any agreement being reached. On December 11, most of the strikers returned to work on the terms offered, the employer refusing, however, to re-employ certain of the leaders in the strike.

**TEAMSTERS, WINNIPEG, MAN.**—Demanding an hourly rate of 35 cents and recognition of the Lumber and Fuel Workers' Industrial Union, nine teamsters employed by one fuel dealer ceased work on December 8. The strikers returned on December 13 without securing recognition of the union but claim to have reached a verbal agreement with the management for a rate of 35 cents per hour. Two pickets arrested in connection with a disturbance outside the plant on December 11 were remanded for trial.

**TEAMSTERS, OTTAWA, ONT.**—A number of teamsters employed by the municipality in removing snow from the streets ceased work on December 20, demanding an increase in the rate per load. The dispute was referred to the Board of Control and in the meantime the teamsters were replaced by trucks.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue of February, 1933, in the review of Strikes and Lockouts in Canada and Other Countries, 1932. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Statistics given in the annual review and in this monthly article are taken as far as possible directly from the government publications of the various countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

### Great Britain

The number of disputes beginning in November was 26 and 6 were still in effect from the previous month, making a total of 32 disputes in progress during the month, involving 6,700 workers with a time loss of 44,000 working days for the month.

Of the 26 disputes beginning in November, 5 were over demands for increases in wages, 5 over proposed reductions in wages, 6 over other wages questions, 5 over questions respecting the employment of particular classes or persons, 3 over other questions as to working arrangements, one over a question

of trade union principle, and one over other questions. Settlements were reached in 23 disputes, of which 5 were in favour of workers, 7 in favour of employers and 11 were settled by compromise.

### United States

The number of disputes beginning in October was 95 and 116 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 128,251, and the time loss for the month 3,619,116 working days.

A strike of 12,000 cotton pickers at Bakersfield, California, was in effect from October 10 to October 30, when it was settled by conciliation by federal government officials and an increase in wage rates was conceded.

A strike of 10,000 textile workers in several towns in Georgia, which also involved 15,000 workers indirectly, was in progress from October 22 to November 1, when it was referred to the National Textile Industrial Relations Board.

A strike involving 27,000 delivery and local transportation workers at Philadelphia, Pennsylvania, was in effect from December 22 to December 24, in protest against the refusal of certain employers to abide by the decisions of the National Labour Board. The general strike was officially called off December 24, on the advice of the national president of the union, but four of the nine local unions concerned remained on strike to secure the adjustment of certain grievances for their own union members.

The first of three articles on railroad labour in the United States appears in the December issue of the *Monthly Labour Review*. It discusses trends affecting all employees of class 1 railroads, 1916 to 1933. Revenue traffic in terms of index numbers based on 1926 was 84.4 in 1916, 52.0 in 1932, 46.8 in March, 1933, and 60.3 in July, 1933. The index numbers of total man-hours were 114.8 in 1916, 50.5 in 1932, 46.7 in March, 1933, and 49.8 in July, 1933. During the rapid decline of traffic, the work required for maintaining traffic facilities prevented a decrease in employment equal to the decrease in traffic, although technological changes reduced the amount of work required. With the upturn in amount of traffic, a comparatively small increase in employment is required.

Industrial hygiene was the subject of four sectional meetings of the American Public Health Association convention at Indianapolis in October. Problems connected with the development of silicosis among workers subjected to exposure to silica dust were given special attention, this disease being of widespread interest at the present time from the standpoint both of its seriousness and of its importance in the field of workmen's compensation. Other subjects discussed at these meetings included industrial dermatoses; poisoning by petroleum distillates; cyanide poisoning; effects of exposure to carbon tetrachloride, particularly its effects upon the eyes; pulmonary asbestosis; and a new X-ray mass procedure for the discovery of early tuberculosis in industry.

## ARBITRATION OF LABOUR DISPUTES IN NEW ZEALAND

RECENT legislation modifying the system of compulsory arbitration of labour disputes in New Zealand forms the subject of a study in the *International Labour Review*, Geneva, for November, 1933. The original legislation enacted in 1894, with later changes, was outlined in the *LABOUR GAZETTE*, March, 1923, page 279. For nearly forty years the Arbitration Court had provided a detailed determination of minimum wages and conditions of labour in important sections of New Zealand industry and set standards to which the remaining sections tended, in varying degrees, to conform. The awards of the Court, which were binding on the parties concerned, were made in most cases for a term of three years. There was no provision for changes in wage rates during the currency of an award in a time of falling prices, and, with the exception of rates fixed by expiring awards, no reduction could be effected without special legislative action. The campaign for lower wages took the form in consequence of a demand on the part of farmers and employers for sweeping amendments to the Industrial Conciliation and Arbitration Act.

"The demand for wage reduction was met early in 1931 by the incorporation in the Finance Act, 1931, No. 1 (Part I of which reduced by 10 per cent the salaries, wages, etc., of persons employed in the public service), of a section (Part II) empowering the Arbitration Court at any time up to the end of 1932 to amend by general order the provisions of existing awards or industrial agreements relating to rates of wages. The court was required to take into account the economic and financial conditions affecting trade and industry in the Dominion. In pursuance of this legislation, the Court, on May 29, 1931, issued a general order reducing the rates of remuneration fixed by awards and agreements by 10 per cent."

Further changes in the arbitration system resulted from the enactment of the Industrial Conciliation and Arbitration Amendment Act, 1932. This Act repealed the fundamental provision of the principal Act, which stipulated that in the event of a dispute not being completely settled by agreement in the Conciliation Council it must be referred to the Court for settlement; and in place of the compulsory section the new Act provided for reference to the Court only with the consent of both parties to a dispute (an exception is, however, made in the case of female workers). The reference of disputes to Conciliation Councils remains compulsory in all cases

where an individual union or association of unions of workers registered under the Act files a citation for such a hearing, or where a citation is filed by the employer or employers of workers registered under the Act. Where a settlement of a dispute is arrived at by the Conciliation Council, the terms agreed on, signed by all the assessors, are filed with the Clerk of Awards and operate as an industrial agreement binding on all the parties. Similarly, if a specified majority of assessors representative of both parties agree to refer the dispute to the Court, the latter may make an award binding on the parties. If no settlement is reached and the parties cannot agree to refer the dispute to the Court, they are left to their own devices (with the exception noted above in the case of female workers).

The writer sees signs that "the recent legislation, which forces the trade unions to depend on their own strength instead of on the protection of a judicial body, is likely to have important consequences on the development of trade unionism." He anticipates further that "the measures thus taken to increase the bargaining strength of the trade unions may lead at first to more frequent and severe industrial disputes when business activity revives, but in the long run they may facilitate the peaceful negotiation of agreements."

The downward trend in child labour in the United States which has been evident for the past decade continued during 1932, according to a survey by the United States Children's Bureau. In the States and cities reporting, 50,233 children, 14 and 15 years of age, obtained first regular employment certificates and left school to go to work. In comparable areas, the number of certificates issued in 1932 was 62 per cent less than in 1929 and 26 per cent less than in 1931, showing that it was becoming increasingly difficult for children to find employment.

The Ontario Secondary School Teachers' Federation at their annual convention on December 28, considered the question of establishing a province-wide sickness insurance system. In Toronto the Federation now has an arrangement whereby each employed teacher pays \$7 into a central fund, into which he may dip in case of sickness over the 20-day sickness allowance provided by the province, and it is proposed to extend the Toronto arrangement to other parts of Ontario.

## DEPARTMENT OF LABOUR OF CANADA

### Annual Report for the Fiscal Year Ending March 31, 1933

THE recent activities of the Department of Labour of Canada are outlined in its Annual Report for the Fiscal Year ending March 31, 1933, published early in January. The following Acts of the Dominion Parliament are administered under the authority of the Minister of Labour:—

*Labour Department Act* (R.S.C., 1927, chap. 111), which directs that statistical and other information of labour interest shall be collected and published, and research conducted into important industrial questions;

*Conciliation and Labour Act* (R.S.C., 1927, chap. 110), which contains certain features in regard to conciliation and arbitration and under which the services of departmental officers stationed at various points in Canada are utilized in the adjustment of labour disputes;

*Industrial Disputes Investigation Act* (R.S.C., 1927 chap. 112), which provides for the establishment of Boards of Conciliation and Investigation in connection with disputes affecting mines and public utility industries;

*Government Annuities Act*, (R.S.C., 1927, chap. 7, as amended in 1931 by chap. 33, 21-22 Geo. V.) which authorizes the sale of Government annuities;

*Employment Offices Co-ordination Act* (R.S.C., 1927, chap. 57) under which, in co-operation with various provincial governments, free public employment offices are maintained in the principal industrial centres;

*Technical Education Act* (R.S.C., 1927, chap. 193, as amended in 1929 by chap. 8, 19-20 Geo. V.) which sanctions the payment of grants to the provinces for the purpose of promoting and assisting technical, vocational and industrial education;

*Combines Investigation Act* (R.S.C. 1927, chap. 26), which provides means for the investigation of combines, monopolies, trusts and mergers which are alleged to have operated or are likely to operate to the detriment or against the interest of the public, whether consumers, producers or others;

*Old Age Pensions Act* (R.S.C., 1927, chap. 156, as amended in 1931 by chap. 42, 21-22 Geo. V), which makes provision for a Dominion-Provincial system of non-contributory pensions to needy persons over seventy years of age;

*The Unemployment Relief Act, 1930* (21 Geo. V, chap. 1) *The Unemployment and Farm Relief Act, 1931* (21-22 Geo. V, chap. 58), *The Unemployment and Farm Relief Continuance Act, 1932*, (22-23 Geo. V, chap.

13) and *The Relief Act, 1933* (23-24 Geo. V, chap. 18) which authorize the granting of aid for the relief of unemployment.

Another task of the department relates to the administration of the Fair Wages Policy of the Government of Canada based on a resolution of the House of Commons of 1900, and of *The Fair Wages and Eight Hour Day Act, 1930*, (20-21 Geo. V, chap. 20) which are designed for the protection of the workmen employed on Dominion Government contracts and on works aided by grants of public funds.

The Minister of Labour is vested with administration of the *White Phosphorous Matches Act*, R.S.C., 1927, chap. 128. There were no claims of alleged infractions of this law during the year and there is, therefore, no formal report of proceedings in the present report.

In addition to the work involved in the administration of the various statutes and ordinances outlined above, the Department of Labour is charged with certain duties arising out of the relations of Canada with the International Labour Organization of the League of Nations.

#### Labour Department Act

The Department operates under this Act, which provides that, with a view to the dissemination of accurate statistical and other information relating to conditions of labour, the department shall "collect, digest, and publish in suitable form statistical and other information relating to the conditions of labour, shall institute and conduct inquiries into important industrial questions upon which adequate information may not at present be available, and issue at least once in every month a publication to be known as the LABOUR GAZETTE, which shall contain information regarding conditions of the labour market and kindred subjects, and shall be distributed or procurable in accordance with terms and conditions in that behalf prescribed by the Minister.

In accordance with this provision, statistical and other information relating to labour conditions has been collected and analyzed by the department since its establishment in 1900 and published in the LABOUR GAZETTE. In addition to the monthly publication of the LABOUR GAZETTE, which was one of the original functions of the department, comprehensive annual reports on Labour Organization in Canada, Organization in Industry, Commerce and the Professions in Canada, and Co-operative Asso-

ciations in Canada are compiled and published by its Labour Intelligence Branch. The department also issues annually a report on Labour Legislation in Canada, containing the text of the labour laws enacted by the Parliament of Canada and by the provincial legislatures. A complete reference library on labour and kindred subjects is maintained by the department, and serves as a centre for its research activities.

Statistical data regarding employment are collected and compiled by the Employment Service Branch in accordance with the provisions of the Employment Offices Co-ordination Act.

Statistical and other information as to strikes and lockouts, changes in prices and the cost of living, wages and hours of labour, industrial agreements and industrial accidents is collected and compiled by the Statistical Branch of the department and published in the *LABOUR GAZETTE*, or in special supplements thereto. The information as to wages is used also in connection with the administration of the Fair Wages Policy in Dominion Government contracts, and for the determination of wages for certain classes of Dominion Government employees on prevailing rates under the Civil Service Act, data being furnished to the various departments for this purpose as required. The information collected and compiled is further used in connection with the settlement of industrial disputes and negotiations for agreements as to wages and working conditions, not only by conciliation officers of the department and Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act, but also by employers and employees who secure on request, regularly or from time to time, special compilations for this purpose. The department also receives numerous requests for such information from persons interested in the establishment or development of industries and those engaged in the study of labour and social problems.

### Conciliation and Labour Act

During the fiscal year ending March 31, 1933, the services of the Department of Labour were utilized in connection with the adjustment of a number of labour disputes. In some of these cases strikes or lockouts had already occurred, and in others cessation of work appeared to be imminent, or there was difficulty in carrying on negotiations in connection with wages and working conditions. The proceedings were under the provisions of the Conciliation and Labour Act, chap. 110, R.S.C. 1927, which empowers the minister to

inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or an arbitrator when requested by the parties concerned. In some disputes occurring in industries coming within the scope of the Industrial Disputes Investigation Act, namely, mines and public utilities, preliminary inquiries by officers of the department resulted in the settlement of the matters in dispute without the necessity of the establishment of Boards of Conciliation and Investigation under that statute.

The Department of Labour has on its staff conciliators and mediators who are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, and Halifax. The territory of the officer resident in Vancouver comprises the three western provinces. The Winnipeg officer's territory is the province of Manitoba. The conciliation officer resident in Toronto confines his activities to Ontario, while the officer in Montreal covers the province of Quebec. The territory of the officer residing in Halifax includes the three Maritime Provinces. The headquarters of the Chief Conciliation Officer are at Ottawa.

These officers are also charged with certain duties arising out of the administration of the Fair Wages Policy applying to contracts let by the Dominion Government and to works aided by federal funds.

The report contains a list of the more important cases in connection with which mediation was provided by the Department during the year. (A similar list was published in the *LABOUR GAZETTE*, May, 1933, page 495; November, 1932, page 1158.)

### Fair Wages Policy

The report gives full information as to the provisions for the payment of fair wages in connection with work under government contracts. (Similar information is given each month in the *LABOUR GAZETTE*.) The Fair Wages policy was originally based on a resolution adopted by the House of Commons in 1900, and amended in 1922, and on the "Fair Wages and Eight-Hour Day Act, 1930" (*LABOUR GAZETTE*, April, 1930, page 383). This Act provides for the observance of current rates of wages and contains the proviso that in all cases the wages to be paid shall be "such as are fair and reasonable" and, further, that the working hours shall not exceed eight a day, except in special cases as the Governor in Council may otherwise provide, or in cases of emergency.

The administration of the Fair Wages Policy of the Government has been in the hands of the Department of Labour since its inception in 1900. In the case of all proposed Dominion contracts for the construction, remodelling, repair or demolition of any work, the departments of the Government which are concerned therewith are required to indicate to the Department of Labour the nature, locality and estimated cost of the proposed works, and the classes of labour which will be required in their execution. The Department of Labour thereupon prepares and furnishes in each case, for insertion in the specification for the proposed work on which tenders are to be taken, a schedule setting forth the rates of wages which are applicable under The Fair Wages and Eight-Hour Day Act, 1930, for the various classes of workmen employed. In exceptional cases a general fair wages clause is sanctioned by the Department of Labour for insertion in the contract in place of a fair wages schedule. The text of the general fair wages clause referred to appears from time to time in the LABOUR GAZETTE, together with certain other clauses for the protection of the workmen employed, which are inserted in all contracts for construction, remodelling, repair or demolition work.

The text of the fair wages clause and other labour conditions which are applicable to the particular Government contracts mentioned above as coming under the labour conditions marked "B" in the Order in Council of April, 1924 (interior fittings, postal stores, etc.), is also published in the LABOUR GAZETTE.

The departments of the Government concerned are further required to furnish monthly to the Department of Labour returns showing the nature of all contracts entered into during the preceding month to which the labour conditions supplied by the Department of Labour were applicable, together with the names and addresses of the contractors, the dates and amounts of the contracts, and the texts of the fair wages schedules and labour conditions inserted in such contracts, which information is then published by the Department of Labour in its official monthly journal, the LABOUR GAZETTE.

Since the inception of the Fair Wages Policy in 1900, fair wages officers have been employed by the Department of Labour to prepare fair wages schedules as required and to assist in the adjustment of complaints and disputes arising from time to time as the proper wages rates and labour conditions observable under the terms of Government contracts.

As in previous years, a number of complaints were received of alleged non-com-

pliance with the labour conditions of Government contracts and also of contracts aided by Dominion public funds. The Department of Labour investigated these complaints in all cases and, when they were found to be justified, the contractors were required to make proper settlement with the workmen concerned.

### Industrial Disputes Investigation Act

The present report contains the 26th annual report of the Registrar of Boards of Conciliation and Investigation, covering the proceedings under the Act during the period covered.

Applications for the establishment of Boards of Conciliation and Investigation received during 1932-33 numbered thirteen; nineteen disputes, however, figure in the record, proceedings having been continued over from the preceding fiscal year in six cases. Over 46,400 employees were directly concerned in these disputes, which were distributed amongst different industries as follows: coal mining, two; steam railways, four; street and electric railways, five; motor busses, one; shipping, two; telephones, one; light and power, three; and disputes not falling clearly within the direct scope of the statute, one. Ten boards were established. No interruption of work occurred following the award of a Board of Conciliation and Investigation.

Applications under the terms of the Industrial Disputes Investigation Act from its inception on March 22, 1907, to March 31, 1933, numbered 785. Boards of Conciliation and Investigation were established in 525 cases, leaving 260 disputes which were either settled by agencies other than those provided by the Industrial Disputes Investigation Act, or in which it was found that the machinery of the statute could not be utilized. In only thirty-eight cases was the cessation of work which threatened not averted, or the strike which had been already entered upon not ended.

The final section of this chapter of the report gives an outline of various prosecution proceedings under the Act during the year.

### Government Annuities Act

The report records that, notwithstanding the serious effect of depressed financial and unemployment conditions on practically all other forms of investment the volume of business transacted during the fiscal year compared favourably with that attained during previous fiscal years, when conditions were much better.

From September 1, 1908, the date of the inception of the Annuities Branch, up to and

inclusive of March 31, 1933, the total number of annuity contracts issued was 16,394. Of these contracts, 1,994 have been cancelled, leaving in force on March 31, 1933, 14,400 contracts. The total amount of purchase money received during the same period was \$36,214-050.67.

During the fiscal year ending March 31, 1933, 573 immediate annuities and 802 deferred annuities, a total of 1,375 were contracted for, the average amount of annuity under the immediate contracts being \$346.

The number of annuities in force on March 31, 1933, was as follows: Immediate, 5,824; Deferred, 8,576; a total of 14,400. The total amount of Immediate Annuities purchased was \$2,435,272, an average of \$418 per contract.

The purpose of the Government Annuities Act is to encourage and aid the people of Canada in the formation of habits of thrift, so that provision may be made for old age, and the Canadian Government Annuities system was designed with this object in view.

### Employment Offices Co-ordination Act

The fiscal year ended March 31, 1933, was the fifteenth in which the Employment Service Branch, set up under the Employment Offices Co-ordination Act, co-operated with the provincial Governments to maintain the Employment Service of Canada. The primary function of the Employment Service Branch is administrative—that of administering the Employment Offices Co-ordination Act (chapter 57, R.S.C. 1927). This Act empowers the Minister of Labour.

- (a) to aid and encourage the organization and co-ordination of employment offices and to promote uniformity of methods among them;
- (b) to establish one or more clearing houses for the interchange of information between employment offices concerning the transfer of labour and other matters;
- (c) to compile and distribute information received from employment offices, and from other sources, regarding prevailing conditions of employment.

The Department of Labour does not itself operate any public employment offices, but, through the device of paying subventions to the provinces, as provided in the Act, encouragement is given to the Governments of the several provinces to operate such offices on a uniform basis. In view of the close co-ordination of effort which is attained, the employment offices of the several provinces and the federal clearing houses, though each unit retains its individual identity, are commonly considered as a single organization known as

"The Employment Service of Canada." The amount of \$150,000 distributed amongst the provinces enabled a repayment to them of 30.7 per centum of their gross expenditures in this field, this being slightly more than was paid by the Dominion in the previous year, due to economies effected by the provinces. Every office of the Employment Service offers facilities for both men and women who are seeking work in any occupation, and for employers seeking any sort of help. Obviously, it is neither practicable nor advisable to segregate the various functions of the offices at all centres, but when the volume of work warrants it, and where the population to be served is of sufficient magnitude, such division of functions is made, and men's and women's skilled and unskilled, farm, factory and domestic, etc., divisions are separately operated. In Western Canada, where seasonal workers, such as farm labourers, are regularly hired in large numbers, it is customary to operate temporary offices at some of the smaller centres in the busy season. A list of the centres where offices are conducted is given in the report. One of the more important phases of the administration of the Employment Service Branch is that of specialized employment work on behalf of handicapped veterans of the late war.

Statistical information covering the field of employment is regularly collected and compiled by the Employment Service Branch and published in the LABOUR GAZETTE. These statistics are of two classes: (a) administrative statistics, showing the work performed by the employment offices, based on daily reports received from them; and (b) statistics based on monthly reports on unemployment, received from local trade unions. In addition, the LABOUR GAZETTE publishes each month index numbers of employment in industry and reports on building permits issued, which are collected by the Dominion Bureau of Statistics, in accordance with the Statistics Act.

From reports received from local trade unions, a figure is compiled monthly showing the percentage of the membership covered which is unemployed on the last day of the month. These statistics, as carried in the LABOUR GAZETTE, are worked out in considerable detail, being published in such form that each province as a whole, each industry as a whole, and each main division of each industry, for the whole of Canada, are shown separately.

The Department of Labour continued the arrangements of the previous year with the transportation companies to secure a special reduced transportation rate for persons pro-

ceeding to unemployment relief works, whether federal or provincial. As the persons selected to proceed to these camps were in all instances in indigent circumstances, transportation costs were paid to the railways by the Governments. The special requisitions required for this transportation, where men were travelling to camps operated by the Department of the Interior or the provincial Governments or to farm work on a relief basis, were issued only through the Employment Service, and during the winter of 1932-33 to March 31, 21,388 men were moved on these requisitions.

### Technical Education Act

Under the Technical Education Act, passed by the Parliament of Canada in 1919, the sum of ten million dollars was set apart for expenditure by the provinces on the development of technical education during the ten years ending March 31, 1929. Eight of the provinces were unable to earn their entire allotments during this period and, in order to give those provinces a further opportunity to earn the balance of their appropriations under the provisions of the statute, the Act was extended at the 1929 session of parliament for a term of five years.

Ontario is the only province which had earned and received its entire appropriation prior to March 31, 1929, but since that date four other provinces, namely, British Columbia, Alberta, Quebec and New Brunswick, have expended the remainder of their allotments. Under the provisions of the legislation passed in 1929 all other provinces have until March 31, 1934, to earn the balance of the funds to which they are entitled.

The report contains an extended summary of the work carried on under the Act and the trend of developments in the several provinces during the period under review.

The administration of the Vocational Education Act, passed by parliament at the session of 1931 (LABOUR GAZETTE, June, 1931, page 643), will also be in charge of the Minister of Labour when the Act becomes effective.

### Combines Investigation Act

The tenth annual report under this Act is presented in the departmental report. This legislation was enacted in 1923 and provides for the investigation of combinations in business and industry alleged to have operated against the public interest. The formation or operation of a combine as defined by the Act is made an indictable offence. The statute provides for inquiry by the registrar on ap-

plication by any six British subjects resident in Canada or on the initiative of the Minister of Labour or the registrar. If preliminary inquiry discloses sufficient evidence to justify further investigation, such further investigation may be conducted by the registrar or by a commissioner specially appointed by the Governor in Council. Full authority is given to the registrar and to commissioners to examine witnesses on oath and to require the production of books and other records. Prosecution of combines may be instituted by the Attorney General of a province or by the Solicitor General of Canada.

A review of the principal investigations and prosecutions under the Act during the past fiscal year is given in the report. The investigations made during the year were conducted by the registrar; no commissioners were appointed and no reports were published.

The proceedings under the Act are noted in the LABOUR GAZETTE from time to time. The present report describes the proceedings in connection with alleged combines of firms in (1) the Canadian basket pool; (2) British anthracite coal; (3) Ontario tobacco; (4) Western Coal; and gives particulars regarding other complaints received and proceedings under the Act in connection with other alleged combines.

### Old Age Pensions

Under this head the report outlines the provisions of the Old Age Pensions Act, 1927, which provides for a Dominion-Provincial system of non-contributory old age pensions in provinces where old age pensions legislation has been enacted and given effect to for this purpose, and the present chapter is the seventh annual report on old age pensions administration in Canada, being for the fiscal year ending March 31, 1933.

Under the terms of the Dominion statute old age pensions administration is vested in a provincial pension authority established by each province, while the Department of Labour administers the statute for the Northwest Territories.

No additional provinces became eligible during the year to participate under the old age pensions scheme, and old age pensions continued to be paid in the provinces of Alberta, British Columbia, Manitoba, Ontario and Saskatchewan, and in the Northwest Territories.

Expenditure for old age pensions in Canada during the fiscal year 1932-33 totalled \$15,375,261.49, of which amount \$11,512,553.19 was contributed by the Dominion Government, there being a total of 71,705 persons in receipt

of old age pensions in Canada as at March 31, 1933, compared with 67,006 pensioners on March 31, 1932, reflecting a net numerical increase during the year of 4,699 pensioners or a percentage increase of 7 per cent.

Full statistics in connection with Old Age Pension administration appear from time to time in the *LABOUR GAZETTE*.

### Unemployment Relief Measures

The report gives particulars as to the work carried on under the various Acts (mentioned earlier in this outline) which provide for the relief of distress due to unemployment and other causes during the past four years. An account of these activities has already appeared in the *LABOUR GAZETTE* (March, 1933, page 290 and elsewhere.)

Under the Relief Act, 1932, the Dominion continued to contribute to the expenditures of the provinces and municipalities for direct relief (food, fuel, clothing, shelter, or the equivalent thereof), the normal arrangement in the case of organized municipalities being 33½ per cent contribution from the Dominion Government with equal contributions from the province and the municipalities. In the case of municipalities unable to carry the financial burden of 33½ per cent contribution, the municipal contribution was lessened on the recommendation of the province with the approval of the Dominion, the difference between the municipal contribution and the total expenditure being divided equally between the Dominion and the province. In the case of unorganized territory, the Dominion Government continued to pay 50 per cent of the provincial expenditures for direct relief.

In connection with the placing of families on the land, agreements were entered into with all the provinces, with the exception of Prince Edward Island, providing for a Dominion non-recoverable expenditure of one-third of an amount not to exceed \$600 per family for the purpose of providing a measure of self-sustaining relief to families who would otherwise be in receipt of direct relief, the remaining two-thirds of the expenditures to be contributed by the province and the municipality concerned as might be decided between the province and the municipality. The agreements provided that the Dominion contribution should be payable to the province progressively as expenditures were made by the province and municipalities and that the total expenditure on behalf of any one family during the first year should not exceed \$500 for all purposes inclusive of subsistence and establishment, a minimum amount of \$100

to be withheld to provide subsistence if necessary during the second year.

Reports received from the provinces in regard to the number of settlers approved under this plan show that 1,463 families and 7,925 individuals were placed. It should be observed that the above mentioned settlement represents only the beginning of the movement, as agreements with the provinces cover a period of two years and do not expire until March 31, 1934.

Representations having been made to the Government with respect to certain municipalities in Western Canada to the effect that they were unable to bear the cost of the relief of many thousands of transients who, it was represented, were neither residents of the municipalities nor of the province itself, the provincial authorities set up honorary commissions who undertook to administer relief to this class of needy persons under agreements which were entered into with the four western provinces in November, 1932. Each agreement provided that the province should establish, under the management of the commission, camps at various leading centres where single homeless persons selected by the commission could be provided with food, fuel, clothing and shelter, and so far as possible employed on useful work. It was also agreed that, where suitable, the single homeless persons might be placed on farms or at the discretion of the commission cared for by any municipality or charitable organization. The agreements provided that the Dominion Government would pay 100 per cent of the cost of providing food, fuel, clothing and shelter to the persons referred to at a cost not to exceed 40 cents per diem, except in the case of persons placed on farms, who would receive \$5 per month, the province to bear any necessary costs of administration.

Arrangements were continued with the Canadian Passenger Association whereby a reduced fare was granted on railways from urban centres to relief camps established by provinces; and for the movement of unemployed farm help from urban centres to farms under arrangements made by provinces, municipalities, and farmers, whereby farm help would be given employment during the winter; and for the movement of unemployed to camps established in different centres for land clearing. The special rate arranged was 1½ cents per mile. Arrangements were made by which the Dominion Government and the province concerned each paid 50 per cent of the cost of such transportation. Upon termination of employment, providing that the worker remained ninety days or more, a return

fare was arranged at the rate of 2 cents per mile payable by the worker.

A table is given showing the disbursements made by the Dominion under the Relief Act, 1932, as at March 31, 1933, the total disbursements being \$15,612,198.42, of which \$44,619.55 was for relief settlement, \$1,330,639.10 for "projects," and \$14,161,485 for other relief, including direct relief.

Under authority of section 2 (b) of The Relief Act, 1932, the Dominion Government, in order that speedy and unhampered prosecution of the measures instituted to relieve distress and provide employment might be carried out, assisted certain of the provinces by way of loans or advances in financing of maturing obligations which the provinces were at the time unable to refinance.

In addition to the foregoing, advances have been made, pending receipt of accounts, to the provinces of Manitoba, Saskatchewan, Alberta

and British Columbia for the purpose of defraying the cost of commitments of the Dominion Government under agreements entered into with the aforesaid provinces for the relief of single homeless persons.

Particulars of these expenditures are given in the report.

### League of Nations International Labour Organization

The Department of Labour is entrusted with important duties arising out of the relations of Canada with the International Labour Organization.

The report contains an outline of the origin, constitution, membership and work of the organization, and summarizes the proceedings at the 16th Session of the International Labour Conference 1932 (LABOUR GAZETTE, May, 1932, page 553.)

## IMMIGRATION AND COLONIZATION POLICY OF CANADA DURING THE DEPRESSION

THE immigration and land settlement policies of the Government of Canada were outlined by the Hon. W. A. Gordon, Minister of Labour and Acting Minister of Immigration and Colonization, in an article contributed to the "Commercial and Financial Review for the Year 1933," published by the *Montreal Gazette*. This article is reproduced in part in the following paragraphs.

After a reference to the policy of unrestricted immigration and railway development that had been pursued in past years, Mr. Gordon outlined the policy and recent work of the Department under the conditions arising out of the world industrial depression.

"The change in conditions which occurred just about four years ago called for a complete revision of immigration policies. Confronted with an unemployment problem which, while common to all countries, was frankly recognized as one of primary concern to the Dominion, it became imperative that Canada's immigration policy should seek to preserve such labour opportunities as were available for those who were already residents of this country. Such a policy has been resolutely pursued for more than three years, and the number of immigrants admitted has correspondingly declined from year to year. In the fiscal year ended March 31, 1930, immigration to Canada amounted to 163,288. The following year these figures were almost cut in two, the movement amounting to 88,223,

and for the fiscal year ended March 31, 1932, it fell to 25,752. The year ended March 31, 1933, showed a further reduction to 19,782, and for the six months of the present fiscal year up to and including September, immigration was 8,380, compared with 13,128 in the corresponding period of the previous year. Even these figures do not present the complete picture. In the first year to which I have made reference nearly half the total number of immigrants were adult males. During six months of the present fiscal year—the latest period for which statistics are available—adult males numbered only 2,152 out of a total of 8,380, the remainder being females and children under eighteen, coming, in most instances, to join relatives already established in Canada. It may therefore be asserted with confidence that any movement of immigration which is now taking place is not contributing to unemployment or other economic difficulties in this country. . . .

"When the practice of encouraging immigration was discontinued, in 1930, it was decided to direct the principal activities of the Department, aside from the necessary inspection and preventive service at ocean and boundary ports, toward settlement on the land of families already resident in Canada. It was found that there were in Canadian cities many families with farm background who had been attracted to the industrial centres in times of prosperity and who were still in possession of some capital which they

would gladly use to go back to the land if they knew just where and how to go. Co-operation was established between the Department of Immigration and Colonization of the Federal Government and the Colonization Departments of the Canadian Pacific and Canadian National Railways, with a view to assisting such people to find satisfactory settlement on the land. It is appropriate that I should pay tribute to the railways for the very effective co-operation they have given in this work. The three organizations above mentioned were placed freely at the disposal of city families who wanted to go back to the land and who had the capital for their own establishment. No financial assistance was given to such families, and the service of the Department and of the railways consisted mainly in placing before them reliable information as to available properties that could be handled with the amount of capital at the command of the settler in each case. Working on this basis, the three interests concerned, in the period from October, 1930, were instrumental in settling on the land 12,328 families, and in finding farm employment for 27,596 single men. On the basis of five persons to the family, this means a recorded land settlement of 89,236 souls.

"Settlement of this kind during the twelve months from September 30, 1932, to September, 30, 1933, amounted to 2,835 families and 6,907 single men, a total of approximately 21,000 souls, or an average of more than 50 persons a day for every day in the year. These figures do not include substantial but unrecorded numbers of families who, under the influence of the general landward movement which had been promoted, effected their settlement entirely on their own initiative; neither do they include a substantial volume of similar settlement carried on under the auspices of various Provincial Governments.

"The value of this settlement work in relieving the pressure on labour opportunities and relief funds in the cities, and in placing men and families in a position to provide their own maintenance, can hardly be overstressed. The family settlement so far discussed consisted of those who had sufficient capital to establish themselves on the land. In the process of the work, however, it soon became apparent that there were many families with farm experience, but without capital, who were eager for such establishment. As a contribution toward relieving this situation, the Dominion Government in May, 1932, decided to bear a portion of the cost of settlement on the land of selected families who could qualify for such assistance, provided the province and municipality concerned

were prepared to make a similar contribution, the total expenditure with respect to any one family to be limited to \$600. The scheme applied only to families who were already residents of Canada, who would otherwise be in receipt of direct relief, and who were found by local committees to be suitable for farm settlement. Under this scheme up to September 30, 1933, there have been settled on the land 2,372 families, including a total of 12,529 persons. The present authorization for expenditures under this scheme expires in March, 1934, but intimations of their desire for a continuance of such settlement have been received from the provinces of Alberta, Saskatchewan, Manitoba, Ontario and Quebec.

"Under present conditions the task of the Federal Department of Immigration and Colonization must be essentially the prevention of immigration which would contribute to unemployment or relief problems, and the placement on the land of families already in Canada who, by training and aptitude, justify the expectation that they will become self-supporting if given the necessary opportunity. This is the work to which the Department is applying itself. At the same time, sight is not lost of the fact that Canada is one of the world's most thinly settled areas and that it possesses the resources and equipment necessary for the maintenance of a very much greater population than it supports to-day. Settlers, mainly from the United States and Great Britain, who have adequate financial resources and can otherwise comply with the immigration regulations, are therefore still being admitted. The movement is quite small, but with the return of better conditions, particularly for our agricultural communities, it may be expected that an increasing number with the necessary means for their establishment will be attracted by the advantages this country has to offer and will in turn contribute their share to the general prosperity of the Dominion."

Under a recent Executive order by President Roosevelt, co-operative societies in the United States have been exempted from the operation of the clauses incorporated in codes under the National Recovery Act which prohibit the payment of rebates to members of such organizations. A similar exemption has been made in connection with licences and marketing agreements approved by the Agricultural Adjustment Administration in so far as the "rebate" clauses might be interpreted as prohibiting the payment of savings returns.

## COMBINES INVESTIGATION ACT

### Members of Alleged Coal Combine Convicted at Quebec

**F**IVE companies engaged in importing and distributing British anthracite coal were convicted of offences against the Combines Investigation Act and section 498 of the Criminal Code on December 12, 1933, when Mr. Justice Laliberté delivered judgment in the Quebec Court of King's Bench, Crown Side, in the case of *The King v. The Canadian Import Company, et al.* The charges against one other company involved in the case were dismissed. The five convicted firms were sentenced to pay fines totalling \$30,000 and costs.

The prosecutions which led to the judgment of December 12 were conducted under the Attorney General of Quebec by L. S. St. Laurent, K.C., and followed an investigation into the alleged combine completed early in 1933 under the Combines Investigation Act.

The facts of the case are stated in detail in the judgment which contains also a review of the law relating to trade combines. The following are extracts from the lengthy pronouncement of the Court:

#### Judgment of Court

In view of the declaration of the Attorneys for the Crown that counts 2 and 8 of the indictment should be disregarded and their admission that count 10 is a mere repetition of certain other counts of the indictment and, therefore, would not justify a distinct and separate condemnation, it is only necessary to examine the evidence and the law respecting the other counts which may be divided into three groups:

(a) The first group has to do with the purchasing or acquiring control over and interest in the whole or part of the business of one or more dealers in coal or in coke, in Quebec, Montreal, Three Rivers, and districts, thereby creating a relationship which has operated or is likely to operate to the detriment of the public (section 32 and section 2, paragraph b, R.S.C., 1927, c. 26), count 9;

(b) The second has to do with the undue restriction of trade and the lessening of competition as set forth in counts 1, 4 and 7;

(c) The third has to do with counts 3, 5 and 6, and specially with respect to the augmentation or fixation of prices.

As there is no Canadian anthracite available for our requirements in this province, it has to be imported either from the United States or the British Isles. After the war, practically the whole of our importations came from the United States; but since 1923 our

use of British anthracite has largely increased. . . . In the beginning, the Amalgamated Collieries, Limited, exported to this country through the F. P. Weaver Company. In 1928, they acquired numerous other collieries and thus controlled around 70 per cent of the total Welsh production. Among the collieries thus acquired by the Amalgamated was the Vale of Neath, by which company the Canadian Import Company was being supplied.

The acquisitions and purchases of businesses made by the accused since 1929 and especially the contracts, P-62 and P-73, could at most be described as overt acts, indicating the intention of the accused as to the commission of the offences recited in the other counts; but in themselves they do not constitute the offence charged. I therefore do not find the accused guilty on count 9 of the indictment. . . .

Apart from American coal, all other kinds of coal imported to St. Lawrence ports were practically all imported by the Canadian Import Company, F. P. Weaver Company, Hartt & Adair, Scotch Anthracite Coal Company, and, for a certain period, the Century Coal Company and Mongeau & Robert, Limited, or its affiliated companies; and, at Quebec, Madden & Son, Limited, eventually acquired by the Canadian Import Company. With the exception of Russian coal, the sources of supply were rather limited, and the control of coal in the hands of a few dealers was certainly favourable to agreements respecting the fixing of prices.

In respect of wholesale price agreements, Exhibit P-8, already provided that the British Coal Corporation after consultation with the Canadian Import Company and the Weaver Company should fix the minimum sale prices. The evidence shows that an extension of this price agreement for all European anthracite was sought by the Canadian Import Company and the Weaver Company from Hartt & Adair and Scotch Anthracite Coal Corporation especially, the biggest independent coal importers in Montreal. The co-operation so sought was secured and continued in effect from 1930 to September, 1933, the date of the indictment.

Prices were adopted or ratified at the meetings of the Montreal Coal Association and the evidence shows that the accused, with the possible exception of Mongeau & Robert, Limited, adhered to these prices. . . .

The Montreal Coal Association had two committees; one for wholesale and the other for retail dealers. The secretary of the Asso-

ciation, Mr. Petrie, referred to a delegation of power authorizing the wholesalers to prepare the best prices they could fix for retailers. Whether there was a delegation of power or not, it was worked out and the wholesalers made an incursion into retail prices.

. . . Mr. Crawley, the expert accountant employed by the Registrar when the preliminary Government enquiry was made, has given the profits that the three parent companies, the British Coal, Canadian Import, and St. Lawrence Stevedoring, realized in the four years in which the offence is alleged to have been committed. He gives the consolidated profit for each ton of Welsh coal imported: 53 cents for 1929, 73 cents for 1930, 63 cents for 1931, and 68 cents for 1932, before providing for Federal or Provincial Income Tax. After making provision for these taxes, the net profit per ton was: 49 cents in 1929, 64 cents in 1930, 57 cents in 1931 and 59 cents in 1932. For Montreal, it was 72 cents; for Quebec 32 cents in 1932. . . In 1932, on sales of 591,236 tons, the net profit was \$367,935.

The Honourable Gordon Scott and another expert accountant, Mr. Cooper, accepted Mr. Crawley's figures, save the four items mentioned in Exhibit D-8 and in the evidence, (pp. 851 et seq.), where a full explanation of their different views is given. . .

#### CONSIDERATIONS ON THE LAW RELATING TO TRADE COMBINES

. . . After reviewing our jurisprudence on the interpretation of section 498 of the Criminal Code and chapter 26, R.S.C., 1927, section 32, upon which sections the accused have been indicted, it is clear that the Court is not entitled to convict unless the accused have exercised their right to combine and make agreements in such a manner as to become injurious to the public. It is often difficult to draw the line especially in cases where the success of private corporations and their continued operation are closely linked with the public interest. The decision must be rendered upon the particular facts disclosed in each case separately and different conclusions may be arrived at even though the methods used in the pursuance of the trade have been altogether similar. Each case must depend upon the purpose, nature and intended effect of the combination or agreement entered into in relation to the public interest.

Upon closely adhering to the text of the sections upon which the accused have been indicted, it will be seen that the essential elements of the offence are:

(a) The existence of a conspiracy in restraint of trade;

72874-3

(b) The participation of the accused in the combine or their assistance with knowledge in the formation or operation of the combine;

(c) The lessening of competition in the trade, actual or potential;

(d) Detriment or injury to the public;

(e) Intention to act detrimentally to the public when, in fact, the agreement did not have the effect prohibited.

. . . Under both these laws, the evil results attained seem to replace the intention. When the combinations or agreements were not operated to have and do not have the specified results, it is essential that it be proved that they were *designed* to have that effect and to be against the public interest. In fact they do have that effect when the agreements themselves are such by their nature and content that their inevitable and necessary consequence must be to unduly prevent or lessen trade, etc., within the meaning of the statutes. . . .

It has been pointed out that enhancement of price, actual or potential, was also an essential element. The enhancement of price is *one way* of committing the offence, as the definition of the offences shows, when unreasonable or to the detriment of the public interest; but the element of price, in my opinion, is not necessarily included in the offence as it can be committed otherwise than by the fixation or enhancement of prices. . .

#### *To the Detriment or Against the Interest of the Public,*

*The King v. Alexander, Limited, et al* (1932) 2 D.L.R. 109: "the words 'to the detriment or against the interest of the public' of the Combines Act were intended to be inclusive of 'unreasonably' in clause (c) and of 'unduly' in clause (d) of sec. 498."

If so, the provisions of the Combines Investigation Act would not introduce any substantial alteration in the law as already set out in section 498 of the Criminal Code and to the interpretation of it. The *fixation of a common price*, however, was introduced in the Combines Investigation Act as a contravention if made to the detriment of the public while the Criminal Code mentioned as a contravention the unreasonable enhancement of prices.

#### *Fixation of a Common Price and Enhancement of Prices*

Though the fixing of a common price might under certain circumstances be considered in itself as a way to commit the offence, still it has been considered rather as a cause for condemnation on the ground of lessening competition unduly.

*United States v. Trenton Potteries Company*, 273 U.S. 392: "The reasonable price fixed to-day may through economic and business changes become the unreasonable price of tomorrow. Once established, it may be maintained unchanged because of the absence of competition secured by the agreement for a price reasonable when fixed. Agreements which create such potential power may well be held to be in themselves unreasonable or unlawful restraints, without the necessity of minute inquiry whether a particular price is reasonable or unreasonable as fixed and without placing on the Government in enforcing the Sherman Law the burden of ascertaining from day to day whether it has become unreasonable through the mere variation of economic conditions."

. . . See also *The King v. Clarke*, 1 Alta. L.R. 358, at p. 365: "The question does not necessarily arise as to whether the price of lumber has been lowered or raised in the province of Alberta. That does not contain the essence of the crime that is made by the statute in connection with this case. As I understand it, the essence of that crime is that men should agree to do something that would unduly prevent competition. In my estimation you can unduly prevent competition without raising the price of lumber."

It must be said, however, that it is far from being unanimously held that agreements to fix a common price should in themselves be taken as unreasonable and unlawful restraints. Present economic conditions particularly with regard to agricultural and forest products, might well call for other views to be taken than those expressed in numerous cases and especially in the *Trenton Potteries* and *Alexander* cases.

. . . Upon the whole, however, a large majority of our judges have decided that they were not called upon to rule as between two rival schools on economic questions. There remains yet to be ascertained whether the judge who is required to take into consideration the public interest, when that public in our law comprises not only consumers but suppliers, distributors and others as well, is not forced to enter into all the elements affecting the public interest. . . .

#### APPLICATION OF FACTS TO THE LAW

Having thus gone into the general principles governing this matter, there remains to be considered their proper application to the facts as disclosed by the evidence.

#### *Basic Agreements*

. . . It has been shown in the evidence that our increased importations of Welsh and

Scotch anthracite coal have been and are beneficial to Canada. As this coal is more subject to degradation it has facilitated the introduction of the "blower" system for the utilization of the pea, grain or buckwheat sizes and has saved over \$18,500,000 to the consumers since 1924 (Neate's evidence, p. 986, and Exhibit D-14). It has also had the effect of lowering transportation rates to the British Isles where we ship large quantities of wheat and forest and agricultural products. Furthermore, it has forced the United States to send us a better quality of anthracite; the heating value of the coal being now 9.0, as compared with 10.0 for Welsh coal, while formerly it was between 8.3 and 8.6. It has also occasioned a keener competition in the coal business; but more desirable results would have sooner followed if certain clauses had not been incorporated into the basic agreement between the accused and the Amalgamated.

. . . Therefore, keeping in mind the necessities of the special trade and the fact that it was in the public interest, it is my conviction that the basic agreement should be declared illegal and detrimental to the public interest only as to those subsidiary clauses which are clearly against the law or which look more after the individual interests of the importers among themselves than concern the necessary maintenance of the trade.

. . . This contract was, in fact, providing for sales and not for agencies. Provisions which may be lawful in agency contracts are generally prohibited for wholesale or retail resale prices in contracts of sale, according to the Sherman Act and our own laws. The provisions of the basic agreement hereinabove referred to for the fixing of a common wholesale and retail resale price might be considered legal, if taken singly and separately. But they have been followed by other agreements with the largest importers of British coal and even of American coal in Montreal. They have been used as an incentive and as a basis to further a "structure of prices" on all British coal and they have been a step along the road in a conspiracy forbidden by the law. Having been such a step and having been extended to a conspiracy in restraint of trade by way of the fixing of a common price for all British coal, as will be hereinafter set out, they cannot be considered separately but must be taken as part of the whole conspiracy that followed and occasioned a larger structure of prices.

As to the clause: "to adhere to present price differentials between American anthracite and Welsh anthracite in establishing prices to the

trade as far as it is possible to do so"; this clause by itself is of a nature to injure the public. If such a margin as about \$1.00 was to be maintained in favour of Welsh coal, it would mean that American coal would not be checked effectively by such competition. Now can it be claimed by the Welsh interests that the extension of their trade had brought about keener competition in the coal trade when cost prices were generally the same and a spread of \$1.00 was to be maintained between them? The clause was not always put into effect, especially in 1933; but it would have been against the public interest if it had been lived up to, as it was their intention to do. These three clauses cannot be enforced, in my opinion, and they come within the law against undue restraint of trade. . . .

*Agreement to Fix Common Wholesale and Retail Prices or to Enhance these Prices.*

Competition between the Canadian Import and Weaver companies having been ended by the basic agreement, further action was taken to include all large importers of British coal in a like agreement. The evidence shows that the Canadian Import Company after the passing of the contract, P-62, whereby it secured control of Madden & Son, Limited, was the only wholesale company doing business in the City of Quebec, and that with the assistance of the Quebec Coal Association (Exhibit, P-218) attempts were made to establish common retail prices though not with full success.

In the city of Montreal, with the assistance of the Montreal Coal Association, a structure of prices was established for the wholesale trade; and the Canadian Import and Weaver companies were among the active participants in the agreements or resolutions that were made from time to time to maintain common prices both in the wholesale and retail trade. The meetings were attended by all the large importers of British coal, and the prices of coal, especially British and, in fact, all European coal, were controlled or sought to be controlled. The only real check to their so doing was, at times, the common prices fixed in the United States for American coal, however, we only import 5 per cent of the total American anthracite production and yet the importers of European coal in Montreal waited until the American coal prices were announced before they themselves fixed the prices of Welsh and Scotch anthracite and all other oversea coal in so far as they could by the stipulations or agreements hereinafter set out.

It cannot be said, though, that the prices fixed were shown by the evidence to have

been unreasonably enhanced. It does not appear that prices were raised from year to year as a result of the agreements. It is merely a matter of speculation as to what these prices would have been without the agreement. Neither Mr. Crawley's nor Honourable Gordon Scott's figures are conclusive as to the reasonableness or unreasonableness of the prices or as to their being in the interest or to the detriment of the public. What is a reasonable profit for a coal dealer? Nobody said what it should be. In the absence of such evidence it was said, the Court should not decide on its own impression upon the point.

It may be said, however, that if the Court had to rule upon the reasonableness or enhancement of the prices it would be rather disposed to take the profit per ton or the profit on the sales turn-over than on the total amount of profit realized in a stated period, inasmuch as the latter profit depends to a large extent upon the magnitude of the operations and the efficiency of the management which should certainly not be penalized. Besides, I would not be disposed to condemn the accused when I am in doubt (and they are entitled to the benefit of the doubt) and it is extremely doubtful whether the Crown is justified in including in the coal profits of the Canadian Import Company the profits made by the St. Lawrence Stevedoring Company though it is under the ownership of the same shareholders. The company that does the stevedoring operations is a distinct corporation and it does this work at the usual prevailing prices in Montreal. It was incorporated long prior to 1929 and I am unable to say that it was formed for the purpose of unduly dividing or concealing the profits arising out of the Welsh coal trade.

I feel bound, however, to follow the principles laid down in *Weidman v. Shragge*, *Stinson Reeb v. The King*, *Trenton Potteries and The King v. Alexander, Limited*, and to rule that it is not necessarily the duty of the Court to inquire into and regulate prices that may change from day to day. It is rather the duty of the Court to look into the nature of the agreement itself and to see whether it interferes with the free course of trade; or, in other words, "what the thing was in essence that the defendants were seeking to accomplish." I quite realize that different conclusions may be reached varying with the circumstances and the necessities of the times, and especially when national basic industries are liable to be put in peril. The Court is certainly given a certain amount of latitude in differentiating between combines, each case having an aspect peculiar to itself.

In the present case a structure of prices was established by the distributors. Many of the exhibits show the intent of the parties to the convention; it being felt that those outside the agreements were rather operating an illegitimate business.

The intention of the parties, except on rare occasions, was to keep prices fairly high and one of the accused even expressed the wish of holding them "to the very limit." Furthermore, the structure of prices served to keep other importers *in line and thereby create a virtual monopoly* on the coal, or, at least, on British coal and, possibly, German and all other foreign coal, which was to be sold at the common price fixed without regard to cost price. As Mr. Justice Duff stated in the *Weidman v. Shragge* case, when the direct and governing object of an agreement is the establishment of a virtual monopoly in the trade of an important article of commerce throughout a considerable extent of territory by suppression of competition in that trade, it comes under the ban of the enactment.

It has been contended that a *monopoly* could not have existed when the agreements concerned the prices of Welsh or British coal only. In point of fact, the evidence shows that these agreements were operated concurrently with other agreements herein set out with the intention of being applied to all coal that might be expected to compete on even terms. If the accused do not seem to have shown much anxiety about American coal, it may have been due to the fact that the heating value of their coal was better and they were thus given sufficient margin to compete successfully, on a level price, as, in fact, they are now doing. Even if the monopoly did not exist on all kinds of coal entering Canada, it applied to such a large percentage that the law affords a remedy. . . .

The agreements passed in 1930 and 1932 imposing sanctions upon retailers who would not stick to the price fixed, are illegal. It has been said that the accused are the best judges as to the methods necessary for the successful operation of their trade. This argument works both ways; and it might be retorted in respect of their intervention in retail trade prices that the retailer might consider himself the best judge as to the way in which he should conduct his business. However that may be, it goes without saying that the retail trader must be left free in the conduct of his business and no repressive measures should be allowed to be taken against him in a country where competition in the free flow of trade is regarded as a public safeguard. The accused and the referee acting in their behalf cannot

invoke ignorance of the law on that particular agreement as legal advice had been taken in 1930.

Therefore, upon the question of the fixation of a common price, both as to wholesale and retail prices, the decision of the Court is, that if there has been no unreasonable enhancement of prices within the meaning of counts 3 and 6, the fixation of a common price and the structure of prices resulting therefrom have been used to prevent or lessen competition unduly in restraint of trade, and that the agreements and resolutions fixing prices were not enforceable, and therefore come under the charge contained in counts 4, 7 and 10 of the indictment.

#### *Agreement on British Coke*

. . . As a return for the assurance that they would not import British coke during the season ending April, 1933, or would not do so before taking the matter up with the Montreal Coke & Manufacturing Company, these two companies [Canadian Import Co. and Weaver Coal Co.] were entitled to buy coke at \$7.50 when the regular wholesale price was \$9. . . .

If it had not been for that agreement, the cargoes bought from Elias Rogers and Mongeau & Robert, Limited, or the Susquehanna, would have competed in the Montreal market with the coke of the Montreal Coke & Manufacturing Company, which has practically no real competitor but enjoys a virtual monopoly in coke in the Montreal district. The prices mentioned were significant. It may readily be conceived that that competition was particularly desirable and that it was unduly prevented and lessened by the agreement which was unenforceable and illegal and which comes under counts 4, 7 and 10 of the indictment. The coke coming by the cargoes consigned to Elias Rogers and Mongeau & Robert, Limited, of the Susquehanna, was bought for distribution among the regular buyers of such a commodity and who, it may be added, form part of the poorer classes of the community. These people should have received the benefit of that competition in the free flow of commerce; but they did not as it was unduly prevented or lessened to their detriment. The agreement is of such a nature that it indicates in itself that it was likely to operate to the detriment of the public.

The prices at which the cargoes had been bought were much lower than the prices of the Montreal Coke & Manufacturing Company; and in a case where the public might be expected to have benefited from the competition, such competition was lessened by the illegal acts of the accused and others who benefited by their action.

## PARTICIPATION OF THE ACCUSED

I find that the Canadian Import Company has participated in the contraventions hereinbefore mentioned and which took place previous to April 17, 1931, and that the Canadian Import Company, Limited, has continued to further the ends of the conspiracy then existing up to the date of the indictment and has been party and privy to all the other agreements also herein declared illegal and in contravention of section 498 of the Criminal Code and of the Combines Investigation Act, R.S.C. 1927, c. 26.

The participation of the F. P. Weaver Coal Company has been established for all the illegal agreements previous to March 18, 1932. The F. P. Weaver Coal Company, Limited, has subsequently continued to further the ends of the conspiracy then existing and has since then up to the date of the indictment participated in all the agreements hereinbefore mentioned in contravention of the same laws.

The British Coal Corporation has also participated in the agreement found illegal but not to the same extent. Its participation in the fixation of a common price to unduly lessen competition has not been established except by its indirect assistance through the consent given to contract P-72 and the agreements respecting German coal. I will therefore take this into consideration in fixing the amount of the penalty. It has not either been clearly established that it participated in the agreement respecting British coke.

As for the St. Lawrence Stevedoring Company, Limited, it has been contended that exhibit P-21 established its participation in the agreements found illegal. This document is merely to the effect that the St. Lawrence Stevedoring Company, Limited, acquired the assets of the Canadian Welsh Anthracite Company, Limited, and it does not necessarily follow that it has been party or privy to the illegal agreements charged. This has not been proved and I have come to the conclusion that the St. Lawrence Stevedoring Company should not be found guilty on any count or on any agreement.

## SENTENCE

Following precedents, I consider that the penalty to be imposed should, while substantial, not be vindictive, especially in a case where common prices, though unduly lessening competition, have not been excessive, except on coke, as the result of an incidental agreement to exclude British coke. The other agreements have been rather of a nature to further the ends of the same

conspiracy though they were made separately and technically call for separate condemnations. Taken separately they might not all have been found in contravention of the law and I consider it would not be just to impose a penalty for each one of them. Moreover, count 10 is a repetition of other counts and no penalty can be separately imposed thereunder. Count 7 is to the same effect as count 4, and under section 15 of the Criminal Code a penalty cannot be imposed twice for the same offence.

The fact that the Canadian Import Company and the Weaver Company took letters patent during the last four years is no reason why each of them should be condemned for the same penalty that might have been imposed if one company had remained in operation from 1929 to 1933. It is precisely the same company with but a change of name and the two together should not be condemned in a larger amount than if they had remained the same company. This is but merely a matter of equity. And it naturally applies to both Canadian Import and Weaver companies.

Therefore, I find, taking everything into consideration, that a penalty of \$5,000 against The Canadian Import Company which has operated until April, 1931, and a penalty of \$7,000 against The Canadian Import Company, Limited, which has since that time knowingly continued to further the acts of the conspiracy and in a special manner to maintain the structure of prices and also entered into other illegal agreements, are reasonable; that a penalty of \$5,000 against F. P. Weaver Coal Company, Limited, and a penalty of \$7,000 against The F. P. Weaver Coal Company, Limited, are also reasonable; that the British Coal Corporation should be condemned to pay a penalty of \$6,000, or, in all, \$30,000.

I also condemn the accused, under the authority of section 1044 of the Criminal Code, to pay the taxable costs and expenses in the case; the accused to pay these costs proportionately to their respective penalty.

Announcement of an intention of appealing from the judgment was made by Aimé Geoffrion, K.C., defence counsel. Five other coal companies in the province of Quebec, indicted as members of the combine, remain to be tried, after an adjournment of their case in the latter part of December.

## VOCATIONAL EDUCATION IN ONTARIO

### Annual Report of the Ontario Apprenticeship Board for the Year ending October 31, 1933

THE past year has been a most difficult one for the Apprenticeship Act. With unemployment at an all time peak it has been almost impossible for a great many employers to give their apprentices steady work; consequently, the Apprenticeship Board found it impractical to carry out many of the requirements of the Act. Employers have been requested to do the best they could for apprentices, which has been done in almost all cases. Many temporary transfers have been made in an effort to keep apprentices employed. The depression has been so acute that many employers felt duty bound to give what little work they had to their old employees, who were married men with dependants. In such cases, which are apparently unfair to the apprentices, the Board has had to use a great deal of discretion, recognizing that the terms of the contract could not be rigidly carried out. With 800 contracts in force during the past year, there have not been more than half a dozen disputes. Almost all of the apprentices realized that conditions were very bad and accepted whatever employment they could procure. Solicitors whom apprentices consulted concerning the terms of their contract have shown a great deal of wisdom and co-operation in advising apprentices to accept whatever work was available, even at a reduction of wages if necessary. Only one apprentice in the whole Province has taken court action to enforce the terms of his contract. The final decision in this case has not yet been rendered.

At the close of the year, there were 647 apprentices registered in the different trades as compared with 826 in October 1932. The distribution of contracts by trades is shown in the accompanying table.

#### DISTRIBUTION OF APPRENTICES BY TRADES

Bricklaying.. . . .	69
Masonry.. . . .	8
Carpentry.. . . .	62
Painting and Decorating.. . . .	29
Plastering.. . . .	33
Plumbing.. . . .	220
Steamfitting.. . . .	66
Sheet Metal.. . . .	74
Electrical.. . . .	86
Total.. . . .	647

Only 27 new apprentices were indentured during this year. The great obstacle in securing new indentures was the lack of work. Employers were very reluctant to indenture

apprentices, knowing that it would be impossible to keep them regularly employed. The worst feature of the existing unemployment condition is the inability of the youth of the country to get work. Many of the boys growing up to-day in idleness will be too old to learn a trade when business picks up; consequently, employers have been urged to train apprentices wherever possible.

During the past winter special day classes were held for the first and second year apprentices in Hamilton during the months of January and February. The attendance was so reduced that it was only possible to have one class in each trade, so that it was necessary to assemble all the boys in the one centre. Hamilton was chosen because of the superior accommodation available in that city. The total number enrolled in these classes was considerably less than in 1932, being reduced from 263 to 94.

The number eligible for classes in January and February, 1934, has been so reduced that, while the Board has still a small surplus in the assessment fund, it was felt that the expense of holding classes was not warranted for the few that would be attending. The only class which would have had a reasonable number in attendance was that for plumbers. Apprentices in all trades have been instructed to enroll for evening classes wherever these are being conducted.

In the cities of Toronto and Port Arthur arrangements have been made with the plumbing and electrical trades whereby all fourth year apprentices are examined by boards representing both the unions and employers and no apprentices in these centres receive their diplomas until they have passed the municipal examination.

Eight meetings of the Apprenticeship Board were held during the past year and the Board met several deputations at various times to discuss the problems of apprenticeship. The activities of the staff have been curtailed and for the most part confined to adjusting difficulties and securing employment for apprentices. Four members of the staff have been transferred to other departments and for the present the Act is being administered by a skeleton staff.

It is most unfortunate that the Apprenticeship Act had scarcely got into operation and had not become established when the acute depression set in. The serious problems facing those administering the Act are due to ab-

normal conditions in the industry which make it impossible for any system of training to function as planned.

It has become apparent that certain changes in the Act and Regulations will be necessary to meet the conditions prevailing in the construction industry, but it is not deemed advisable to take action along this line until conditions have become more settled and an increasing volume of business gives hope of providing fairly steady employment for apprentices and journeymen. Meanwhile temporary adjustments are being made to meet the exigencies of the situation created through lack of employment.

Several changes have been made in the form of indenture and at present the contract is so drawn up that an employer may have the same altered or cancelled by making applica-

tion to the Apprenticeship Board, if he finds that he cannot carry out the original terms of the agreement. It is no longer possible to provide continuous employment for apprentices, and employers are now required to keep apprentices employed only as long as they have work for them to do.

The members and officials of the Board are: Chairman of Board, Mr. J. B. Carswell, Hamilton; Members: Messrs. E. Ingles, London, and F. S. Rutherford, Toronto.

Chief Inspector: Mr. A. W. Crawford.

Assessment Officer: Mr. George Chambers.

District Inspectors: Messrs. George B. Evans, Walter Thorne, Toronto; Fred J. Hawes, Hamilton; J. R. Johnson, Ottawa; Charles E. Needham, Windsor.

## ANNUAL SURVEY OF EDUCATION IN CANADA, 1932

THE Dominion Bureau of Statistics recently published its Annual Survey of Education in Canada, the present volume being for the year 1932. The school year ending in 1932 showed the usual annual increase of about 50,000, or about 2 per cent on the 1931 attendance of 2,543,000. Educational expenditures decreased by approximately \$15,000,000 when compared with 1931, when the total was \$178,700,000. Most of the available data on expenditures relate to teachers' salaries which represent about half of education costs.

In an introductory preface, Mr. R. H. Coats, Dominion Statistician, notes that "elementary school enrolment declined in several provinces in 1932, and seems likely to drop further, and in other provinces, in the years immediately ahead. For the first time in history, the Census of 1931 showed fewer children under the age of five than in the next older five-year group, not only in the Dominion as a whole, but in every province. Secondary enrolment, however, continues its rapid ascent, and this factor in conjunction with the decreasing number in the lower grades may serve to hasten the reorganization of the intermediate grades. The tendency to connect a part of the earlier high school work more intimately with the elementary school is displaying itself in an increasing number of the provinces."

Teachers' salaries in all provinces showed lower averages, rural teachers sustaining especially heavy reductions. This was particularly illustrated by the statistics for two provinces—Manitoba and New Brunswick—where preliminary figures for 1933 showed that in two years the Manitoba country

teacher took a cut of 33 per cent on a salary of \$867, and the New Brunswick rural teacher a cut of 19 per cent on a salary of \$621. The reductions for teachers in larger schools were about 10 per cent on salaries nearly half as big again in each case. It is stated that "this disproportionate misfortune of the rural teacher no doubt exists in the other provinces as well." In this connection it is pointed out that in the public schools of the Ontario district inspectorates, the salaries at which rural teachers were engaged for the year 1933 were 9 per cent below 1931, and those of urban teachers only 4 per cent. Both reductions, it is considered, would probably be greater if reported at the end of the year, "for in these times a teacher cannot be sure of the amount of the annual salary until the year has ended."

"Among the reasons for the greater losses of the rural teacher," the report states, "is the particularly unfavourable economic position of the farm population and of other primary producers in the last few years. A second reason lies in the fact that the teacher's salary represents a comparatively high proportion of the school budget in the small school, where expenditure on buildings, equipment and modern school services is comparatively small; the result is that school boards, when prompted to cut costs, find little to cut except the pay of the teacher. Perhaps a still more fundamental reason lies in the average sizes of the communities supporting rural and urban schools. There are at most only a few dozen ratepayers to support a country school, and all of these usually are engaged in the same occupational pursuit. Its risk of ex-

posure to financial stringency is correspondingly greater than in a town area where the basis of support is broader and more diversified. The 'law of large numbers' is in itself a form of insurance against inadequacy of school support."

This financial inability of small rural school districts has led, it is pointed out, to the exploring of other avenues of financing on the basis of a larger unit of school taxation than the limited area of the districts. The municipality or the county is now being regarded as a more suitable and broader basis of school support. Attention has been focused on the possibilities of such action owing to the financial conditions of the past few years. The trend in this direction is indicated by the steps taken in various provinces and by the recommendations of various commissions and educational officials. Another tendency

observed in the last few years is towards a decreased use of Departmental examining.

The educational status of population over ten years of age is dealt with in a section which indicates that in 1931 the percentage of such population who can read and write was 95.74. Among men the percentage of illiteracy was 4.3 and among women 3.2. On a basis of linguistic ability, 84.6 per cent can speak English; 28.6 can speak French, while 1.8 per cent can speak neither official language.

In addition to enrolment figures for the various classes of schools and educational institutions, the tabular statistics also present the enrolment in the following: technical and vocational educational schools; the Workers' Educational Association of Ontario; schools for the blind and deaf; Junior Red Cross; Girl Guides; Boy Scouts; and Victorian Order of Nurses.

## PLAN TO DECASUALIZE LONGSHORE LABOUR IN U.S.A.

A PLAN to decasualize longshore labour in the ports of the United States under the administration of the shipping code has been recently presented by the United States Department of Labour (*Monthly Labour Review*, December, 1933). Decasualization is described as being "primarily a problem in the technique of employment and work distribution, vitally affecting the interests of employers and workers alike."

The labour conditions of longshoremen are summarized as follows:—

(1) A large immobile body of workers scattered over the entire waterfront and ignorant of the actual time and place where work is available; (2) A considerable number of individual employers each aiming to create a large reservoir of labour in order to be able to satisfy their maximum demands during peak loads; (3) Complete dependence of the job of longshoremen on chance and on the good will of the "employing foreman"; (4) Conditions of hiring longshoremen, which because of the autocratic power concentrated in the hands of the hiring foreman, pave the way for unfair practices and exploitation; (5) Periods of enforced idleness alternating with long stretches of hard labour, resulting in extreme variations in the earnings of longshoremen.

Certain general requirements are laid down as fundamental in the application of a plan of decasualization: (1) There must be a complete registration of all longshore labour available in the port; (2) Only those on the register should be permitted to work on the

waterfront; (3) All employers must give up their right to hire longshore labour individually at their piers or elsewhere and must agree to secure their labour through the decasualizing agency only.

With these minimum requirements fulfilled, it is considered that a scheme of decasualization should accomplish the following results:

(1) It should guarantee to all employers an equal chance to obtain labour when and where needed; (2) It should guarantee to all longshoremen an equal chance of getting a job when work is available; (3) It should gradually reduce the number of longshoremen in port to that approximating the actual needs of the port and thus raise and make more regular the average earnings of the men on the register.

It is recommended that the actual work of decasualizing the ports and of maintaining a central employment station for longshore labour shall be carried out by an authoritative and impartial agency, with "unquestioned trust and support from all the interests involved." It is further proposed that the National Recovery Administration co-operate with the United States Department of Labour in organizing such an impartial agency for the specific purpose of decasualizing longshore labour in the United States.

To carry out this plan, it is recommended that the National Recovery Administration appoint a National Decasualization Board to be "the responsible and final authority" for the decasualization work in all the ports.

This Board was to consist of the administrator of the shipping code, the Director of the Employment Service of the Department of Labour, and an advisory board of three employers selected by the code authority and

three workers approved by the president of the International Longshoremen's Association.

The report details the method of procedure for the organization and pooling of the labour supply, mode of payment, etc.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Reports on 1934 Conference Agenda

REFERENCE was made in the November issue of the LABOUR GAZETTE (at pp. 1058 and 1060) to the items on the agenda of the Eighteenth Session of the International Labour Conference, which is to open in Geneva on May 11 next.

Questionnaires have been sent out by the International Labour Office to the Governments of all the Member States of the Organization on the first three of the agenda subjects, namely: (1) Reduction of hours of work; (2) unemployment insurance and various forms of relief for the unemployed, and (3) methods of providing rest and alternation of shifts in automatic sheet-glass works.

The first questionnaire referred to above is divided into two parts. In the first part governments are asked to communicate their views and information on a number of points of general interest—the number of persons employed and unemployed, existing weekly working hours, the extent to which hours have been reduced, and the effect which a reduction of hours to 40 in the week would have on general national economy, etc. The second part or questionnaire proper, asks whether the International Labour Conference should adopt international regulations for reducing hours of work and whether they should take the form of a Draft Convention, and if so, whether it should be framed with a view to remedying unemployment. The remaining general questions deal with the problem of maintaining wages and the standard of living, etc. Then follow questions of a more detailed nature. Governments are consulted on the scope of the proposed regulations; on the hours of work to be laid down; on the guarantees which may be set up to ensure that the reduction in hours shall result in increased employment; etc. In the section dealing directly with hours of work, Governments are explicitly asked whether the Draft Convention should limit hours of work as a general rule to an average of 40 hours a week, with 42 hours for work which is necessarily continuous; and whether a special lower average (say, 38½ hours) should be laid down for underground work in coal mines.

The second questionnaire asks the governments if they think it desirable to adopt a Draft Convention concerning benefit schemes for the involuntarily unemployed, and a supplementary recommendation on the same question. It also asks whether the suggested Convention should specify the system to be applied; compulsory unemployment insurance, voluntary unemployment insurance, unemployment relief, a combination of these different methods or of any two of them, or whether each country should be free to choose the system which it would incorporate in its national legislation. Many other questions are also put to the Governments.

The third questionnaire deals with the desirability of adopting international regulations concerning the methods of providing rest and alternation of shifts in automatic sheet-glass works.

On the basis of the replies received to these questionnaires, the International Labour Office will draft texts which will be submitted to the Eighteenth Session of the International Labour Conference.

Reports have also been issued on two of the other subjects appearing on the agenda, namely: (1) Employment of women on underground work in mines of all kinds (based on information which it has itself collected and on replies to direct requests for particulars to the different governments of those States Members in whose legislation no express prohibition of underground work for women could be found); and (2) the partial revision of the Convention concerning workmen's compensation for occupational diseases, which report will furnish the Conference with the conclusions of specially chosen experts, members of the Industrial Hygiene Committee of the International Labour Office, who have studied the technical questions involved in the proposed revision of the Convention as adopted in 1925 so as to add certain diseases to the existing list and to properly define them.

It is understood that reports will be issued shortly on the remaining two items of the agenda, i.e., Revision of the 1919 Convention concerning the Employment of Women during

the Night; and Maintenance of Acquired Rights in course of Acquisition under Invalidity, Old Age and Widows' and Orphans' Insurance on behalf of Workers who Transfer their Residence from one Country to Another.

### Employment Exchanges Throughout the World

Under the title "Employment Exchanges" the International Labour Office has just published a study of the general principles, and to some extent the detailed methods, of administration adopted in employment exchange systems throughout the world. (Studies and Reports, Series C: Employment and Unemployment, No. 18). The report contains a preliminary chapter on the general question of the mobility of labour, and then deals with the general working of employment exchanges (organization, relations with employers and workers, etc.). A chapter is devoted to the increasing specialization in the placing of particular classes of workers (agricultural workers, seamen, casual workers, salaried employees, artistes, hotel employees, domestic servants and juveniles). After a general examination of the need for changes of occupation brought about by technical progress and rationalization, there is a chapter on the organization of labour clearing, including the important large-scale movements organized by the State in such countries as Italy and the Soviet Union. An account is also given of the principal aspects of international placing work (organized migration), and the volume concludes with a short description of the employment and unemployment statistics compiled by the employment exchanges.

### "Unemployment among young persons" on Agenda for 1935

Next year's agenda of the International Labour Conference is to include consideration of the question of unemployment among young persons, which is held to be one of the most serious effects of the world economic depression. The *Monthly Summary*, published at Geneva, quotes figures showing the extent of such unemployment in Great Britain, Germany, the United States and other countries, and proceeds: "It is unnecessary to emphasize the gravity of the situation which is disclosed by these figures. In many respects the prolonged unemployment of a large section of the youth of a country is undoubtedly much more detrimental in its consequences for the community at large than unemployment among adults. This is why special measures

are necessary to counteract those detrimental consequences. Several countries already have adopted such measures, and the International Labour Office, on the basis of their experience, presented a first report to the last session of its Governing Body. Having studied this, the Governing Body decided to put the question of unemployment among young persons of the agenda of the 1935 session of the International Labour Conference".

The following subjects have also been the subject of special study by the International Labour Office:

The reduction of wages and employment in agriculture;

The overcrowding of the intellectual professions;

The stagnation in shipping and unemployment among seamen.

"Each of these problems," it is stated, "has its own special characteristics, but there are certain common, fundamental features: on the one hand, the effects of the world depression, and on the other, the lack of co-ordination between the greatly accelerated rhythm of scientific or technical progress and the less rapid development of professional organization."

The Hon. L. A. Taschereau, premier of Quebec, announced on December 13 that the government would hold an inquiry into conditions in lumber camps in the province, and that Mr. Maxine Morin, K.C., legal adviser to the provincial Department of Lands and Forests and Mr. Louis Morin, of the Department of Provincial Revenue, would be sent to Rouyn to discuss with employers and workers questions arising out of recent difficulties in that region.

The redistribution of surplus or stranded populations, so as to make such citizens self-sustaining, is the program of the Subsistence Homesteads Division formed in the United States Department of the Interior. Colonies (urban, rural, or agricultural) will be formed in which subsistence will be drawn partly from the homestead garden plot and partly from part-time employment in industries set up within the colony. The projects are experimental only and the sites are to be chosen not on the geographical basis, but with reference to the principal "problem areas" in the United States. Two projects are under way, one a colony being built in West Virginia, the other a subsistence-homestead project being carried on through a self-help organization formed in Dayton, Ohio, by unemployed of that city.

## ANNUAL REVIEW OF EMPLOYMENT IN CANADA, 1933

(Based upon monthly reports furnished the Dominion Bureau of Statistics by leading employers throughout the Dominion.)

THE employment situation in Canada during the greater part of 1933 was characterized by a distinctly favourable movement, paralleling the recovery shown in most of the leading industrial countries of the world.<sup>1</sup> In the first few months of the year, activity reached its lowest level in recent years, but from April 1 the general trend was steadily upward, the period of improvement extending over eight months. The gains indicated in several of these months exceeded the average increases noted on the same dates in the years since 1920, while those in the last quarter were particularly interesting because they were contrary to the usual seasonal movement as determined by the experience of the last twelve years. Approximately 146,900 persons were reinstated by the co-operating employers during the 1933 period of uninterrupted expansion, in favourable contrast with the reduction of over 40,000 workers reported by the firms furnishing data for the months April 1-December 1, 1932. The proportion of the total wage-earning population

included in these surveys is considerable, approximating 45 per cent of those enumerated in the 1931 census as at work; if data were available for all firms and all industries, the number reported above as having been re-employed during 1933 would of course be very substantially greater.

The index number of employment (based on the 1926 average as 100), after declining from 78.5 on January 1, 1933, to 76.0 at the beginning of April, then rose steadily to 91.8 on December 1, an advance of 15.8 points or 20.8 per cent from the 1933 low. This percentage gain is larger than that indicated in any other year for which statistics are available. Another significant feature of the situation in 1933 was that the index at the end of the year was 13.3 points, or 16.9 per cent, higher than at January 1, while in the last three years the opposite has been the case, employment having been in smaller volume at the close than at the opening of the year. Thus in 1932, 1931 and 1930, there were declines of 8.4, 2.6 and 2.7 points, respectively, in this comparison.

A brief analysis of the distribution of the workers added to the payrolls of the co-operating employers from April 1 to the end of the year shows the widespread nature of the recovery in 1933. The five economic areas and all but one of the main industrial groups shared in the improvement as indicated in the following summary:—

INCREASES IN THE MONTHLY PAYROLLS OF  
FIRMS FURNISHING DATA DURING THE 1933  
PERIOD OF GENERAL EXPANSION

Economic Areas	Increase in Workers	April 1- December 1 in Index Numbers (p.c.)
Maritimes.....	10,500	19.3
Quebec.....	52,000	26.4
Ontario.....	56,900	19.2
Prairies.....	13,600	14.1
British Columbia.....	13,900	24.1
Canada.....	146,900	20.8
Industry	Increase in Workers	April 1- December 1 in Index Numbers (p.c.)
Manufacturing.....	41,789	11.1
Logging.....	38,275	367.7
Mining.....	6,606	15.4
Communications.....	(Dec.) 923	(Dec.) 4.1
Transportation.....	6,665	7.5
Construction.....	46,319	72.9
Services.....	1,577	6.1
Trade.....	8,592	10.7
All Industries.....	146,900	20.8

<sup>1</sup> Employment statistics that are generally comparable do not exist for the various industrial countries. The following shows the latest available data for certain countries:—

Great Britain: The latest press reports show that 2,224,079 persons were registered as unemployed on December 18, 1933, as compared with 2,280,070 on November 20, 1933, and 2,723,287 on December 19, 1932. The insured persons between the ages of 16 and 64 estimated at work on December 18, numbered 10,007,000; this was 51,000 more than in the preceding month, and 567,000 more than on December 19, 1932.

France: The total number of persons on the registers of the Employment Exchanges on December 2, 1933, was 286,874, as compared with 261,524 in the preceding month, and 294,739 in the same period of 1932.

Germany: Of the 4,930,731 members of the German Labour Front covered by returns, 20.9 p.c. were reported as wholly unemployed on October 28, 1933, as compared with 22.3 p.c. in September. The provisional figure showing the number registered as unemployed by the Employment Exchange as unemployed was given as 3,714,107 in December, 1933, as compared with 3,775,934 in November, 1933. The total for the end of December, 1932, was 5,772,984, but this was not strictly comparable with the foregoing totals.

United States: The index of employment in the manufacturing industries in October, 1933, was 74.0, calculated on the 1926 average as 100. On September 15 this index was 73.9 and in October, 1932, it stood at 59.9. The index is based on data received from 18,602 establishments employing 3,358,960 persons at the middle of October.

The large advance in construction was mainly due to works undertaken for the relief of unemployment. While logging is normally seasonally active during the winter months, the gains last year were unusually large, giving evidence of a decided revival in the lumbering industry. Analyses of the increases in these various areas and industries appear elsewhere in this review.

The general index of employment is influenced to some extent by public works undertaken for the relief of unemployment.<sup>1</sup> This factor does not, however, enter into the situation in the manufacturing industries, which reporting over half of the total workers included in the monthly surveys of employment, showed uninterrupted recovery during eight months of 1933—from January to August, a revival that differed in period but not in length of time from that of the included industries, taken as a whole. During this period, over 61,400 persons were added to the working forces of the co-operating manufacturers, an increase that compared favourably with the decline of over 3,900 operatives reported by the factories furnishing data for the same period in 1932, and also with the increase of only some 5,300 workers indicated in the same months of 1931. The index, rising from 74.4 at the opening of 1933, to 86.8 on September 1, showed a gain of 12.4 points or 16.7 per cent in these eight months. Seasonal recessions affected the situation in the last quarter of the year, but on the whole, these were on a smaller scale than has been usual in the twelve years for which statistics are available, and the index of factory employment, at 84.4 on December 1, was 10 points or 13.4 per cent above the January 1 index. It was also higher by slightly over five per cent than on December 1, 1932.

An average of approximately 8,140 employers furnished monthly statistics on employment to the Dominion Bureau of Statistics during 1933; these firms showed curtailment during the first four months of the year, followed, as already stated, by important recovery in the next eight months.

<sup>1</sup> The number of man-days worked on state-aided projects on a wage basis numbered 1,157,559 during the first eleven months of 1933, while to those employed on useful works in return for subsistence and a small cash allowance 8,494,212 man-days work were given. This was a total of 9,651,771 man-days of employment afforded in 1933 up to November 30. During 1932, the man-days worked on a wage basis numbered 7,700,709.

The firms furnishing data on employment reported a monthly average of 768,628<sup>2</sup> employees. Their staffs ranged from 698,544 on April 1 to 850,486 on December 1, when activity was at its highest point for the year. The index then stood at 91.8, the highest in twenty-four months; the 1932 peak was 91.6 on January 1, while the maximum so far reached in this record of thirteen years was 127.8 at the beginning of August, 1929, when the payrolls of the 6,840 then co-operating firms aggregated nearly 1,100,000. The mean index (average 1926=100) was 83.4 in 1933, compared with 87.5 in 1932, 102.5 in 1931, 113.4 in 1930, 119.0 in 1929, 111.6 in 1928, 104.6 in 1927, 99.6<sup>3</sup> in 1926, 93.6 in 1925, 93.4 in 1924, 95.8 in 1923, 89.0 in 1922 and 88.8 in 1921. In connection with these indexes, it might again be mentioned that during the depression there has been a very general movement to retain as many as possible on the working force by reducing the daily or weekly hours worked. The earnings of the persons included in the monthly reports on employment, if available, would in this way doubtless have shown in many cases a greater decline than the number on the payrolls upon which the index numbers are calculated, while similarly, an improvement in the business outlook will be reflected in many cases by an extension of the working hours rather than by an immediate increase in the personnel. In the United States, the provisions of the National Industrial Recovery Act have during 1933 accentuated this phase, the increase in the numbers on the payrolls frequently being at the expense of a reduction in the time worked by those already in employment. This is illustrated in the statistics of earnings, which in the United States are collected from the firms who furnish monthly data on employment. Thus, the index of employment in manufacturing on October 15 (the latest avail-

<sup>2</sup> The number of wage-earners reported in the Census taken in June, 1931, was 2,564,879, of whom 2,093,211 were at work on the date of the Census. The firms reporting for June 1, 1931, showed an aggregate payroll of 940,875 persons, or 44.95 p.c. of the census total, which included the professional classes (notably teachers and public administration employees), agriculture, domestic service and other important industries not included in the monthly survey of employment. Since 1931, the number of co-operating firms has grown, with a consequent increase in the proportion of the total working population represented in these statistics.

<sup>3</sup> As the average for the calendar year, 1926, including figures up to December 31, 1926, is the base used in computing these indexes, the average for the 12 months, January 1-December 1, 1926, generally shows a slight variation from 100.

able date), stood at 74.0 per cent of the 1926 average, while the index of earnings, calculated on the same base, was only 53.6 on the same date.

Another point may be noted regarding the Canadian index numbers of employment. Where employers are obliged to curtail their production, it often happens that the date to which the monthly survey relates marks the low point in activity for the month, employment frequently being in greater volume on almost any other working day of the month. This factor is of greater importance when the numbers at work fluctuate about a low level than when staffs are more normal.

A healthy feature of the recovery in employment during 1933 was its widespread character, all five economic areas and most industrial groups sharing to a greater or less degree in the improvement evidenced after the spring revival commenced; this is illustrated in the figures reported showing the distribution of those added to the reported payrolls. The general nature of the recovery affords much better grounds for belief in its permanency than if the gains had been confined to a few specialized lines. Manufacturing, as already mentioned, showed important increases during many months of the year, the additions being well distributed among the various groups of factory employment. Logging was brisker towards the end of 1933 than in any other month since early in 1930. Mining reported uninterrupted improvement from May 1 to November 1, with the result that the index on the latter date was higher than in any other month since early in 1931. Construction gained considerably during each month of the active season, partly as a result of relief undertakings, but was generally lower than in previous years. Services and trade (both to some extent dependent upon the tourist season, which during 1933 was not up to expectations) maintained a fair volume of employment, the index numbers for these divisions being rather higher towards the close of 1933 than in the earlier months of the year and also than in the latter part of 1932. Employment throughout 1933 was brisker in these two groups than in any other industrial division. In this connection, it might again be pointed out that in these lines of business, establishments as a rule cannot be wholly closed down for longer or shorter periods, as in manufacturing plants, with the result that the situation is frequently met by cutting down the normal working day or week for the individual employee in order to retain as many as possible on the payroll. This tends to keep up the employment index, since the methods used in rotating the staff

are usually not reflected in the monthly employment data.

### Employment by Economic Areas

Each of the five economic areas reported an upward movement in employment during many months of the year just passed; the situation at the end of 1933 was better in these districts than it had been at the opening of the year, and also than at the end of 1932. The greatest proportional gain between the 1933 low and high points occurred in British Columbia. In that province the maximum of activity was in September, when the index, at 89.2, was 31.8 per cent higher than the minimum of 67.7 on March 1. Employment in all five economic areas averaged rather lower over the year than in the twelve months of 1932. It is encouraging to note in this comparison that the low point in employment was reached in the early part of 1933, succeeded by improvement in many months, while the opposite was the case in the preceding year, when employment generally declined from the beginning to the end of 1932, the index in each district being decidedly lower on December 1 than at the opening of the year.

### Employment by Cities

On the whole, employers in the eight cities for which separate tabulations are made—Montreal, Quebec, Toronto, Ottawa, Hamilton, Windsor and the adjoining Border Cities, Winnipeg, and Vancouver—reported smaller average payrolls than in 1932, but an encouraging feature of the 1933 situation is that activity (contrary to the 1932 movement), generally increased from the spring, the index for each of these cities being higher at the end than at the beginning of the year, while in all but Montreal and Quebec City, employment was also in greater volume than on December 1, 1932. The reports showed that employment, as in the preceding year, was better maintained in Ottawa and Quebec City than in the other centres above named, while the lowest indexes were again indicated in Hamilton and Windsor and the adjoining Border Cities.

### Manufacturing Industries

Employment in manufacturing generally increased uninterruptedly during 1933, from January 1 to September 1, a longer period of expansion than in any other year since 1928. During these eight months of recovery, over 61,400 persons were reinstated on the staffs of the co-operating establishments; this represented an increase of more than 12 workers

in each of the reporting plants. Seasonal losses reduced employment during the last quarter of the year, but on the whole, these were smaller than the average experienced in the last twelve years, and the index, at 84.4 on December 1, was 10 points or 13.4 per cent higher than at the first of the year. This is particularly important, in view of the fact that in each of the years since 1930, activity has declined as the year progressed; thus, between the indexes for January 1 and December 1 in 1932, 1931, and 1930, there were reductions of 3.6, 4.1, and 5.9 points, respectively. Another interpretation of the figures brings out the significant fact that the payrolls reported at the beginning of December, 1933, exceeded those indicated for January 1 by some 50,000 persons, or an average of more than 10 in each establishment included in the survey. The December 1, 1933 index was 5.1 per cent higher than on the same date in 1932; indeed, employment since July of last year has been more active each month than in the corresponding month of the preceding year, the first occasions since 1929 that improvement in such a comparison has been indicated. The indexes for the last five months of 1933 averaged 85.9 or 3.5 points higher than in the period August 1-December 1, 1932; those for the first seven months, however, had averaged 77.3, or 8.6 points lower than in the months January 1-July 1 of the year preceding, with the result that the general average for 1933 was below that of 1932, in spite of the more favourable note on which last year closed for the manufacturing industries.

Statistics were received during 1933 from some 4,980 manufacturers employing, on the average, 401,557 operatives, as compared with the average of 417,989 reported by the 4,870 establishments making returns in 1932. The index averaged 80.9 per cent of the 1926 payrolls of the co-operating firms, as compared with a mean of 84.4 in the preceding year, 95.3 in 1931, 109.0 in 1930, and 117.1 in 1929.

Index numbers are prepared for 45 different divisions and sub-divisions of factory employment; with few exceptions, these showed considerable improvement as the year progressed until the situation was better than in the same period of 1932. In spite of this, the majority of these industries and their sub-groups reported a lower average of employment for 1933 as a whole; the mean index in 12 cases being higher, in 32 lower, and in one the same as in the preceding year. The edible animal, fur, leather, boot and shoe, paper product, thread, yarn and cloth, wood distillate and extract, and agricultural implement and automobile groups, were more active.

### Logging

Logging camps, on the whole, reported decidedly more activity than in the preceding year and also than in 1931; although employment was generally low during the first part of 1933, it was above the 1932 level in all but two months, while the index, rising swiftly in the early winter, was higher on December 1, 1933, than in any other month since the early part of 1930. The improvement was largely due to an increased demand in markets abroad; the implementing of the agreements signed at the Imperial Economic Conference at Ottawa in 1932 had a distinctly beneficial effect upon the logging industry, while recent industrial recovery in the United States has also stimulated the demand for lumber in that country. It may confidently be expected that the increase in bush operations in the winter of 1933-34 will be reflected in heightened activity in lumber-using mills next season. The working force of the 231 logging firms supplying information during 1933 averaged 18,278, and the index number, 66.5; the reported payrolls varied from 9,614 on May 1 to 45,989 at the end of the year. In 1932, the mean index was 42.5, while the number employed by the 223 employers co-operating was 11,646. In recent years, many logging workers, deprived of their customary occupation, have drifted to the cities, where they have augmented the already large labour reserves, in many cases without ever having appeared on the payroll of any employer in the municipality. It has already been pointed out in previous issues that the difficulties of collecting data covering bush operations are constantly increased by the growing practice on the part of the larger operators, of letting contracts for their wood requirements to small contractors and to settlers on the northern frontiers of settlement. During the year just passed, as in 1932 and 1931, employment in logging was maintained in better volume in the Maritime Provinces and Quebec than elsewhere.

### Mining

There were losses in mining during nine months of 1932, while the trend was upward in seven months of last year. Until August 1, 1933, employment each month was lower than on the same date in 1932, but from mid-summer activity was greater than in the corresponding period of the preceding year. The index at 105.5 on December 1, 1933, was nearly nine per cent higher than on January 1, and was also 5.6 per cent higher than on December 1, 1932. Nevertheless, employment on the average was at a slightly lower level than

in the preceding year. The index averaged 97.5 compared with 99.2 in 1932; this was a fall-off of only 1.7 points, as compared with the reduction of 8.5 points in 1932 from the 1931 level. In *coal-mining*, employment was slacker, the index averaging 84.1, compared with 91.0 in 1932, so that the decline in this branch was decidedly greater than the general loss in the mining group. The labour force of the co-operating operators averaged 22,644 workers in 1933, as against 24,337 in the preceding year. Employment in the mining of *metallic ores*, was generally higher than in 1932, the mean index, at 143.8 being between ten and eleven points above the average of the preceding year. The index varied from 129.8 on January 1 to 159.7 on December 1, showing improvement during ten months of the year. The staffs of the reporting firms averaged 16,990 during the year under review, compared with 15,687 in 1932. *Non-metallic minerals* (other than coal) registered decidedly curtailed employment, being affected by the dullness generally prevailing in the building trades. The index averaged 69.3, as against 71.8 in the preceding year, however, in the last five months of the year, the situation was better than in the same months of 1932. An average payroll of 4,585 persons was employed during 1933 by the co-operating firms, while those reporting in 1932 had a mean of 4,756. Quarries, asbestos mines and other divisions coming under this heading recorded lowered activity.

### Transportation

There were important seasonal losses in the first three months of 1933, which, however, involved a decidedly smaller number of persons than in the first quarter of the preceding year. Following this period, the tendency was favourable until the beginning of November, when seasonal losses were again recorded. Employment was in less volume throughout 1933, when the index averaged 79.0, as compared with 84.7 in 1932. The 370 transportation companies whose returns were tabulated employed, on the average, 92,920 workers, as compared with the mean of 99,478 reported by the 357 employers co-operating in the preceding year. In the *steam railway division*, the index averaged 69.7, or nearly eight points lower than in 1932. An average working force of 55,472 employees was recorded in steam railway operation, compared with 61,554 in 1932. *Street railways* and *cartage* companies to the number of 179, with a mean of 24,032 workers, reported a rather lower level of employment, the index averaging 112.9, or

1.5 points lower than in the preceding year. The tendency was unfavourable during most months of 1933. Employment in *shipping* and *stevedoring* was also less than in 1932; the mean index was 79.9, while the reported staffs averaged 13,417, varying between 9,957 persons on March 1, and 15,443 at the beginning of October. In the year before the mean index was 82.3.

### Communications

Telegraphs and telephones reported a much smaller volume of employment during 1933 than in 1932, in sympathy with the continued depression in business. The index averaged 83.9, compared with 93.5 in 1932. The personnel of the companies furnishing data averaged 22,062 employees, of whom some 80 per cent were engaged on telephones. The proportional reductions indicated in the telegraph and telephone divisions during 1933 were quite similar, these apparently being affected in like degree by current conditions.

### Construction and Maintenance

The period of expansion indicated in the construction industries during 1932 consisted of only three months, during which the additions to staffs were on a comparatively small scale; in 1933, however, there were increases in six of the twelve months, but in many cases these were wholly or partially due to works undertaken by public authorities primarily for the relief of unemployment. In spite of this factor (of greater importance towards the end of 1933 than in the preceding year), the employment reported in construction was generally at a low level. The forces of the 1,006 co-operating employers averaged 86,646 during 1933, varying between 63,051 on April 1 and 110,207 at the beginning of December, when extensive relief works were being carried on. The general index for this group averaged 74.6, compared with 86.0 in 1932. The organization of work camps in place of direct relief for certain classes of unemployed men was instituted on a large scale during 1933, a reversal of the policy of direct relief called for under the Relief Act of 1932; this resulted in a decided increase in activity in some branches of construction work as compared with 1932, particularly towards the latter part of the year.

*Building construction* gained in five months in 1933, but was generally quieter than in the preceding year in spite of the fact that improvement was indicated in the last two months over November 1 and December 1 of 1932. The mean index in 1932 was 54.1 per

cent of the 1926 average, dropping to 38.5 in the year under review, when the average number of persons employed by the 635 reporting contractors was 14,404. In 1932, 658 contractors had reported 21,389 employees, on the average. As already stated in connection with logging, there is an increasing tendency for the larger contractors to sublet their contracts, by trades, to sub-contractors, who usually employ a comparatively small number of workers. When they have less than 15 employees, they are not asked to furnish data on employment, so that the number employed in building is undoubtedly considerably in excess of that covered in these statistics.

*Road construction* as reported to the Dominion Bureau of Statistics afforded a smaller volume of employment in the first seven months of 1933 than in the same period in 1932. In the latter part of the year, however, an increase in the number of persons engaged on unemployment relief works raised the index to a point higher than in the corresponding period of 1932, and also decidedly higher than at the beginning of 1933. Nevertheless, the average number reported in the highway construction group last year was smaller than in 1932. The payrolls reported averaged 47,756 workers, and ranged between 31,359 on April 1 and 71,039 at the beginning of December. The index averaged 132.2, compared with 143.9 in 1932. In many districts, road work is supplementary to the occupations ordinarily followed by nearby residents, particularly agriculturists during slack periods on their farms.

Employment in *railway construction* (in which the working forces covered averaged 24,487 men), was much quieter than in the last few years. The index averaged 61.3, while the mean in 1932 was 66.8. In 1928, when activity was at its maximum in this record of thirteen years, an average payroll of 46,148 persons was reported, and the mean index stood at 116.7.

### Services

Statements were received monthly from some 336 firms in this division, whose employees averaged 21,174. Gains were noted during seven months of the year under review, but until November 1, employment each month was less than in the same month of 1932. The index averaged 106.7, compared with 113.6 in the preceding year. Employment in hotels and restaurants was generally at a lower level than in 1932, partly reflecting an unfavourable tourist season, resulting from a general tightness of money, and also affected to some extent by the popularity of the

World's Fair at Chicago. In the miscellaneous group of services, composed largely of laundering and cleaning establishments, employment was also in rather smaller volume than in the preceding year, although in relation to the 1926 average, it was brisker than in other branches of this division.

### Trade

Trade was generally quieter than in 1932; with only one exception, employment advanced from month to month from March 1 to December 1, 1933, but until the final quarter of the year, was lower than in the corresponding period in 1932. The payrolls of the 893 co-operating firms averaged 81,770 persons, and the index 112.1, compared with 116.1 in 1932. It has already been mentioned as highly probable that many establishments, in order to keep on most of their usual staff, have reduced the working hours per week or per month, so that the earnings of the persons employed would, if available, show a greater falling-off than the personnel. Of the workers in the trade group, nearly 74 per cent were classified as employed in retail stores. In recent years, there has been a growing tendency for the larger stores and chain organizations to absorb the small businesses which would otherwise not be represented in these statistics, and this change in organization may have helped to keep the index of employment in recent years at a relatively high level in comparison with other groups.

Tables of index numbers, by economic areas, by leading cities and industries, by months and with yearly averages, are published in the bulletin entitled "Annual Review of Employment in Canada, 1933" issued by the Dominion Bureau of Statistics. This bulletin, which contains full particulars regarding employment by industries, districts, etc., will be forwarded on application to the Dominion Statistician. Monthly index numbers have been published in each issue of the *LABOUR GAZETTE*, those for December appearing on pages 50 to 53 of this issue.

The Colorado Fuel and Iron Company recently held a ballot of its employees for the purpose of deciding whether the "Rockefeller employee-representation plan," which had been in existence for the past eighteen years, should be continued or abandoned. The employees voted for the abandonment of the plan and for recognition of the United Mine Workers of America. As the company is in receivership the decision is stated to be subject to the approval of the Federal District Court.

## EMPLOYMENT CONDITIONS IN CANADA AT THE END OF DECEMBER, 1933

### Reports of Superintendents of the Employment Service

THE employment situation at the end of December was reported by the Superintendents of the Employment Service to be as follows:—

Farmers in the Maritime Provinces were handicapped by heavy snow storms and in many cases were unable, owing to the blocked roads, to take their produce to the city markets. Where possible, they were engaged in cutting and hauling firewood for domestic purposes. Continuous gales and extremely low temperatures hampered fishing and as a result, only small catches were reported. Deep snow also hindered lumbering operations, as it was difficult to forward supplies to camps and men who came out for the holidays were finding it almost impossible to return. All indications were favourable, however, that lumbering would rank high as an employer of labour this winter. Continued demand for overseas markets promised a measure of prosperity not evident for years, providing employment for all experienced woodsmen and many others. All mines in the New Glasgow area resumed operations, working on steady time and re-hiring employees as speedily as conditions permitted, while those in Cape Breton and vicinity worked from 1 to 4½ days per week. Though conditions were quiet in steel and car plants over the holidays, yet the prospects were that more employment would be provided for steel workers and foundry, car and structural steel plants than had been available for at least a year. Manufacturers of foodstuffs reported Christmas trade good, oil companies, slow, and sugar refineries and cordage companies, fair. Ice harvesting also continued to employ a number of men. Building construction was practically at a standstill, but a large number of applicants in receipt of civic relief were employed on sewer work and clearing of snow. Railways also hired large gangs for snow shovelling. Plumbers were busily engaged during the coldest weather. Transportation, both by railway and steamship, was heavy, due to the holiday season, and reported to be considerably in excess of that of December, 1932. Freight shipments also showed improvement. Retail trade recorded a substantial increase and wholesale houses were correspondingly busy. With lumbering, mining and steel plants absorbing more men in industry, merchants were in an optimistic mood and were looking forward to an immediate improvement in general business conditions.

There was a good demand for domestics, housekeepers and charworkers in the Women's Division, and a number of satisfactory placements were made.

There was no change in the agricultural situation in the Province of Quebec, but logging showed some improvement. Mining remained practically unchanged, though indications pointed to slightly better conditions. Manufacturing was only fair, cities reporting as follows: Hull, all plants busy; Montreal, clothing, boots and shoes and rubber quiet, metals active; Quebec City, factories in general on reduced time; Three Rivers, normal, with slight decrease in output of paper-mills. Building construction was very quiet throughout the province, the main source of work continuing to be that provided by the various municipalities as a relief measure. Recent heavy storms had aided the unemployed in obtaining jobs as snow shovellers, the City of Montreal employing 6,000 men for that purpose alone. Transportation was fairly good. A number of placements was made in the Women's Domestic section where cooks and generals, as well as charworkers, were in demand.

There was little activity in farming in Ontario other than a few calls for choremen, but while nearly all vacancies were filled promptly, the supply of applicants in excess of requirements was not as large as might be expected and a check of farm hands placed during the year at Brantford indicated that a large percentage was being retained in employment. Vacancies existed for skilled bushmen with difficulty sometimes experienced in securing the right type of men. Conditions were ideal in the woods for log hauling, which would probably start immediately after the holidays and continue from 4 to 8 weeks, depending on the volume of production and the weather. Nothing new was reported in mining, all producing mines in the Sudbury and Timmins district being very active. No material change appeared in the manufacturing centres at the close of December: while some plants operated steadily, others were on short time, or carrying on with reduced staffs. Building construction was very quiet, but relief work, financed by the Dominion, Provincial and Municipal Governments, continued to furnish employment for numerous workers. Work of a temporary nature was also provided by the Post Office in the handling of the Christmas mails.

Trade showed improvement, some of the larger department stores reporting gains from 25 to 35 per cent. Due to the holiday season there was a shortage of good domestics in the women's sections, but more workers were expected to be available early in the New Year.

Farm placements in the Prairie Provinces were nearly all made under the Farm Relief plan, with some orders still unfilled. A much greater demand existed for all classes of loggers. With the colder weather mines were running fairly steady, most of those in Drumheller employing full shifts. The manufacturing industries were quiet, with no prospects of improvement at present. Building construction was practically nil, the City of Winnipeg reporting that, in a year notable for the entire absence of public works, the City building permits had dropped below the million dollar mark for the first time this century. From the record of permits issued it was quite apparent, however, that smaller building jobs were still going on, though to a lesser extent. Relief projects continued with many men employed, except where exceptionally cold weather made it inadvisable for men to work out of doors. Trade was slow, although holiday business was better than anticipated and conditions, in general, maintained the slight improvement already noted. There was still a large number of unfilled orders, both for housekeepers and domestics under the relief scheme, with a scarcity of applicants suitable for same, and the influence of the holiday

season could be noted by the decline in the volume of business conducted by the women's sections.

There was very little demand for farm hands in British Columbia, nothing being done in the orchards owing to the heavy fall of snow. Packing houses had only small staffs employed and shipments of fruit were still being made. Logging and sawmills, except for the holidays, were busy with 50 per cent more men employed than at the corresponding time in 1932, and wages in one district 10 per cent higher. Mining was fairly active, with the outlook favourable, but no demand for help. Manufacturing was at a standstill, no orders were coming in and few in prospect. Construction was very quiet, the only division showing activity was that of linemen, who were busy renewing and replacing light, telephone and telegraph lines destroyed by storms of recent date. Railway gangs were also sent out for snow shovelling and relief work on street clearance continued, besides that provided in the National Defence camps. The waterfront was quiet at Prince Rupert and Vancouver, but continued active with lumber shipments at Victoria. Shipyards were not busy. Trade for the most part showed improvement over that of a year ago, with a better feeling prevailing for the present year. There was a decided increase in applicants and orders in the women's domestic section, due to the holiday season. Many of the placements, however, were for casual work only.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN NOVEMBER, 1933

THE following information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on December 1 was 8,428, the employees on their payrolls numbering 850,486 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for November was 1,722, having an

aggregate membership of 146,946 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

## (1) Employment Situation at the beginning of December, 1933, as reported by Employers

Employment at the beginning of December showed a further expansion, the eighth consecutive gain reported since April 1. This latest increase (like that on November 1), was particularly interesting because it reversed the downward movement which hitherto has invariably characterized the situation in the early winter. During the present month, statistics were tabulated by the Dominion Bureau of Statistics from 8,428 employers whose pay-rolls were enlarged from 845,793 on November 1 to 850,486 at the beginning of Decem-

activity, the co-operating firms have added approximately 147,000 persons to their staffs. As has previously been pointed out in these monthly surveys of employment, the proportion of the wage-earning population included therein is large, but if data were available for all industries and all employers, the number of workers shown as having been reinstated would considerably exceed the increase mentioned above. In conformity with the improvement in recent months, the general index has risen from 76.0 at the beginning of

### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

ber. Reflecting this gain, the index (1926 average=100) rose from 91.3 on the former date to 91.8 on December 1. This is the highest figure in two years. The losses experienced on December 1, 1932, had reduced the index by between one and two points, to 83.2; this was over 10 per cent lower than on the date under review.

The increases at the beginning of December completed for the present year the period of expansion that has been indicated by leading employers since the early spring. During the last eight months of generally advancing

April to 91.8 on December 1, a gain of 15.8 points, or nearly 21 per cent. During the same eight months in 1932 and 1931, there were declines of 4.3 and 0.6 points, respectively, while in 1930 and 1929, there were increases of 0.7 and 8.7 points, respectively, in this comparison.

The improvement on the date under review occurred largely in logging and retail trade and on highway construction, where the personnel of unemployment relief camps increased with the advent of the cold weather. The gains in logging and trade are seasonal; those

reported in the former, providing work for over 15,700 men, were the largest ever shown in this record of twelve years. Activity in bush operations is greater than for several years past. On the other hand, manufacturing was seasonally slacker, chiefly in the food, leather, textile and lumber industries, while mining, transportation, building and railway construction also showed curtailment as compared with the preceding month.

### Employment by Economic Areas

Four of the five economic areas registered heightened activity, the Maritime Provinces, Quebec, Ontario and British Columbia showing improvement, while firms in the Prairies reported curtailment.

*Maritime Provinces.*—The trend of employment in the Maritime Provinces has been downward on December 1 in preceding years of the record, but this unfavourable movement was reversed at the beginning of December of the present year, when the index, rising to 93.4, reached its highest point for the year. It was also nearly ten points higher

than on December 1, 1932. Most of the increase this year took place in logging, although construction and trade were also brisker. On the other hand, manufacturing (especially of animal food, lumber, pulp and paper and iron and steel products), coal-mining and shipping reported reduced activity. Data were received from 597 firms employing 65,473 persons, as against 63,186 on November 1.

*Quebec.*—There was a further increase in activity in Quebec, according to statements from 2,044 employers of 250,403 persons, or 554 more than in the preceding month. Though not large, this gain was of particular interest because it was contrary to the usual seasonal movement indicated at the beginning of December in the years since 1920, in only one of which (*viz.*, 1922) was there a gain noted on this date. The increase reported on December 1, 1933, was the eighth consecutive advance made by the employers furnishing monthly data on employment, the trend having been upward since April 1; during this period of expansion, nearly 52,000 workers have been added to their staffs. The index

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS  
(AVERAGE CALENDAR YEAR 1926=100)

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia
Dec. 1, 1921.....	88.3	100.4	79.8	91.5	94.9	78.9

Dec. 1.....	91.8	93.4	92.4	93.3	89.3	85.4
Relative Weight of Employment by Economic Areas as at Dec. 1, 1933.....	100.0	7.7	29.4	41.5	13.2	8.2

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada by the firms making returns for the date under review.

has risen from 73.1 at the beginning of April to 92.3 on December 1, or by over 26 per cent. a gain that contrasted very favourably with the reduction of nearly 6,000 persons, and approximately 2.5 per cent in the index, that had been reported by the employers furnishing statistics for the same period in 1932. The usual seasonal losses had been recorded on December 1, 1932, when employment was in smaller volume. Construction work decreased on the date under review, and there was also curtailment in manufacturing, steam railway operation and services; within the manufacturing group, the largest declines occurred in textile, leather, lumber, food, pulp and paper, electric current and clay, glass and stone factories. On the other hand, shipping was more active in an effort to clear up about the harbours before the winter close-down; local transportation also showed improvement, trade was seasonally brisker, while logging reported very pronounced increases.

*Ontario.*—Employment in Ontario showed its eighth successive increase, which was also the ninth monthly gain indicated during 1933;

this was a longer period of expansion than in any other year since 1928, when a total of nine increases had also been reported. During the consecutive months of heightened activity in the present year, more than 56,900 workers were re-employed by the co-operating employers, in comparison with the reduction of over 26,100 workers noted in the corresponding period in 1932. The index, rising from 91.4 on November 1, 1933, to 93.3 at the date under review, showed an increase of 19.2 per cent as compared with the 1933 low of 78.3 on April 1; it was also decidedly higher than the December 1, 1932, index of 84.1. The firms making returns for December 1, 1933 (3,741 in number) had 352,860 employees, compared with 345,640 at the beginning of November. Services, retail trade, logging and highway construction recorded considerable improvement since the preceding month. Communications, mining, transportation and manufacturing, however, showed curtailment, largely seasonal in character. Within the group of factory employment, the leather, lumber, textile, clay, glass and stone and food industries reported reductions, those of a seasonal nature

Relative Weight of Employment by Cities as at Dec. 1, 1933.....	14.6	1.4	13.0	1.4	3.0	1.2	4.1	3.1

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated city to the total number of all employees reported in Canada by the firms making returns for the date under review.

in canneries being most pronounced; on the other hand, rubber, tobacco and beverage, electric current and iron and steel works were more active.

*Prairie Provinces.*—Further marked declines were indicated in the Prairie Provinces on the date under review; the 1,234 reporting employers had let out 6,627 workers, reducing their staffs to 111,714 on December 1. Retail trade, communications and logging increased their personnel. On the other hand, mining, transportation and construction reported decreased employment, while manufacturing showed little general change. Employment at the beginning of December was at a higher level than in the same date in 1932, although the losses then indicated had been on a rather smaller scale.

*British Columbia.*—Improvement was noted on December 1, 1933, the first time in this record of twelve years that activity has increased at the beginning of December. The gain occurred largely in mining, retail trade, logging and highway construction; in the last

named, it mainly represented unemployment relief works. On the other hand, manufacturing was decidedly slacker, chiefly in food factories, where the decline was seasonal in character. A reduction had been recorded on December 1, 1932, when the index was between 11 and 12 points lower. The 811 firms reporting for the date under review had 70,036 employees, as compared with 68,777 in their last statement.

Table 1 gives index numbers by economic areas.

### Employment by Cities

Of the eight centres for which separate tabulations are made, Toronto, Hamilton, Windsor and the adjacent Border Cities and Winnipeg showed improvement as compared with November 1; firms in Ottawa reported practically no change on the whole, while lessened activity was indicated in Montreal, Quebec City and Vancouver.

*Montreal.*—There was a decrease in the employment afforded by the 1,153 co-operating

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES  
(AVERAGE CALENDAR YEAR 1926=100)

Dec. 1.....	91.8	84.4	166.5	105.5	81.0	79.8	94.6		
Relative Weight of Employment by Industries, as at Dec. 1, 1933.....	100.0	49.4	5.4	5.7	2.5	11.0	13.0	2.7	10.3

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada by the firms making returns for the date under review.

firms, whose staffs were reduced by 2,945 persons to 124,393 at the beginning of December. Manufacturing showed lowered employment, mainly in textile and leather factories, and highway construction was also duller. On the other hand, retail trade and transportation reported improvement. The gains in the former were seasonal, while those in the latter took place chiefly in shipping, due to activity preceding the close of navigation. A general gain had been noted on the same date of last year, and the index of employment was then fractionally higher.

*Quebec.*—Industrial activity in Quebec City declined, 183 workers being laid off by the 156 employers whose returns were received, and who had 11,755 employees on December 1. The largest contractions were in manufacturing, mainly in leather factories, while transportation, particularly in the shipping branch,

afforded considerably more employment, in anticipation of the winter shutdown. A much larger recession had been indicated on the same date in 1932, but the index then was higher.

*Toronto.*—Continued increases in personnel were recorded in Toronto by 1,242 firms who employed 110,414 persons, as compared with 109,904 at the beginning of November. Trade showed noteworthy improvement, and services and construction also reported greater activity, while manufacturing and transportation were slacker. Within the former, textile, iron and steel and leather factories made reductions in their working forces. Losses had been registered on December 1 of last year, and the index of employment was then fractionally lower.

*Ottawa.*—Very little general change was shown in Ottawa, improvement in construction

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT IN MANUFACTURING (AVERAGE 1926=100)

Industries	Relative Weight	Dec. 1, 1933	Nov. 1, 1933	Dec. 1, 1932	Dec. 1, 1931	Dec. 1, 1930	Dec. 1, 1929	Dec. 1, 1928

<i>All industries</i> .....	100.0	91.8	91.3	83.2	99.1	108.5	119.1	116.7

†The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

and trade being offset by decreases in manufacturers and transportation; 159 employers recorded a combined payroll of 12,138 workers, as against 12,153 in their last report. Employment was rather more active than at the beginning of December, 1932, when a general loss had been indicated.

*Hamilton.*—An increase occurred in Hamilton, where an aggregate working force of 25,235 persons was employed by the 254 firms furnishing data, who had 25,049 employees on their November 1 staffs. Manufacturing as a whole was rather slacker, due to curtailment in the food group, while there were moderate gains in electrical apparatus and iron and steel plants. In the non-manufacturing division, highway construction also showed a betterment, but other industries reported only small changes. The index was a few points higher than on the same date of a year ago, when a reduction had been noted.

*Windsor and the adjacent Border Cities.*—There was an advance in the Border Cities, mainly in iron and steel plants. Statements were tabulated from 146 employers with 10,207 workers, compared with 10,030 in the preceding month. A gain had also been indicated on December 1, 1932, but employment was then at a lower level.

*Winnipeg.*—Employment improved in Winnipeg, according to data received from 401 firms employing 35,137 persons, as compared with 34,486 on November 1. Little general change took place in manufacturing, while trade and telephones showed heightened activity, that in the former being seasonal in character. The index was slightly higher than on the same date of last year, when a large decline in employment had been noted.

*Vancouver.*—There was a slight contraction in Vancouver, according to 350 employers of 26,432 workers, or 98 fewer than on November 1. Manufacturing, mainly of food products, was slacker, but trade showed improvement in preparation for the holiday season. A reduction had been reported at the beginning of December, 1932, but the index then was fractionally higher.

Index numbers by cities are given in Table 2.

### Manufacturing

A seasonal decrease in employment occurred on December 1 in manufacturing establishments, 5,087 of which employed 420,468 operatives, compared with 430,442 on November 1. This decline of rather more than two points approximated the average loss re-

corded in the twelve preceding years for which data are available; after correction for the seasonal movement, therefore, the index showed very little change from that for November 1. Tobacco, rubber, chemical and electrical apparatus works reported heightened activity, but there were reductions (in some cases of a seasonal character) in the food, leather, textile, lumber, pulp and paper, clay, glass and stone, electric current and non-metallic mineral product industries. A smaller general decline had been indicated on December 1, 1932, but the index was then over four points, or five p.c. lower; on the same date in 1931, an improvement (which was very unusual for the season) had occurred, while decidedly larger losses had been noted at the beginning of December in 1929 and 1930.

A significant feature of the present situation is that the index on December 1 was ten points or 13.4 p.c. higher than at the beginning of 1933, while on the contrary, employment has been in smaller volume at the close than at the opening of each year since 1930. Thus in 1932, 1931 and 1930, there were declines of 3.6, 4.1, and 5.9 points, respectively in this comparison. During 1933, the general movement in manufacturing was uninterruptedly favourable from the beginning of the year until September 1; in the last quarter, however, there were seasonal contractions, but these were on a smaller scale than usual. The December 1, 1933, payrolls exceeded those reported for January 1 by over 50,000 workers; since these are employed in approximately 5,000 establishments, it follows that the average factory staff reported to the Dominion Bureau of Statistics has increased by rather more than ten persons during the present year.

*Animal Products—Edible.*—There were further declines in fish canneries, meat packing plants and dairies, these being largely seasonal in character. The result was a reduction of 727 in the staffs of the 232 firms making returns, who had 18,519 employees. This decrease involved a somewhat greater number of persons than that recorded on the same date in 1932, but employment was then at a lower level.

*Leather and Products.*—Employment in this industry showed a considerable loss at the beginning of December, which occurred almost entirely in boot and shoe factories. Statements were tabulated from 259 manufacturers, employing 17,613 persons, as compared with 19,399 on November 1. Smaller reductions had been noted on December 1, 1932, but the index was practically the same as at the date under review.

*Lumber and Products.*—Seasonal curtailment of operations on a smaller scale than at the beginning of December, 1932, took place in this group; the losses were chiefly in rough and dressed lumber mills, while furniture factories reported improvement. All except the Western Provinces shared in the generally downward movement. Data were received from 772 firms in this industry, whose staffs declined from 31,889 workers on November 1 to 30,730 on December 1. The index was considerably higher than on the same date a year ago.

*Plant Products—Edible.*—There was a seasonal reduction of 3,749 employees in the 402 vegetable food factories whose returns were received; they reported a combined working force of 29,383 operatives. The curtailment indicated was chiefly in canneries in Ontario and British Columbia. The volume of employment on December 1, 1932, was practically the same, although smaller losses had then been noted.

*Pulp and Paper.*—Statements were received from 569 manufacturers in the pulp and paper industry, whose payrolls were decreased by 571 persons to 53,135 at the beginning of December. Employment was brisker than on the same date in 1932, when a larger decline had occurred. Improvement took place in printing and publishing establishments, while pulp and paper works released employees. Reductions in personnel were shown in all except the Prairie Provinces.

*Rubber Products.*—A further gain in activity was reported in the rubber group. This took place mainly in Quebec and Ontario. The working forces of the 46 co-operating establishments stood at 11,368, compared with 11,046 on November 1. An increase had also been shown on the corresponding date in 1932, but the level of employment was then lower.

*Textile Products.*—There was a seasonal recession in employment in these industries, the first decline indicated since January 1, 1933. Most of this occurred in the clothing trades, although knitting and headwear mills were also slacker. Returns were compiled from 873 manufacturers employing 87,595 workers, or 1,773 fewer than in the preceding month. There was a much larger loss at the beginning of December, 1932, and the index was then over seven points lower.

*Tobacco, Distilled and Malt Liquors.*—Employment in tobacco factories increased, but other divisions of this group showed curtailment. An aggregate payroll of 15,388 persons was indicated by the 155 co-operating

firms, compared with 15,124 at the beginning of November. Larger gains, on the whole, had been shown on the same date in 1932, when the index was a few points higher.

*Clay, Glass and Stone Products.*—Further seasonal reductions occurred in brick and stone works; 458 persons were released by the 185 co-operating manufacturers, who had 6,291 on their payrolls. A downward tendency was also in evidence on December 1, 1932, when the volume of employment was smaller.

*Electric Current.*—There was a decrease in employment in electric current plants, 96 of which had 13,172 employees, or 478 fewer than in the preceding month. The loss occurred mainly in Quebec. A smaller reduction had been reported at the beginning of December, 1932, and the index number then was higher.

*Electrical Appliances.*—An increase was noted in electrical apparatus plants; 104 manufacturers employed 10,592 persons, as compared with 10,379 in their last report. Employment on December 1, 1932, was higher than on the date under review, although the trend was then downward.

*Iron and Steel Products.*—No general change took place in iron and steel factories, increases in rolling mills and other groups being offset by losses in heating appliance and some other branches. There was a minor increase of 76 in the staffs of 783 co-operating manufacturers, who employed 82,497; this was not large enough to be reflected in the index number. The general level of activity in this group was higher than on the same date in the preceding year, when a greater gain had been indicated.

*Non-Ferrous Metal Products.*—Practically no change occurred in this division at the beginning of December, according to data received from 145 employers of 14,814 persons, as compared with 14,793 in the preceding month. The index was higher than on December 1, 1932, curtailment having then been registered.

### Logging

Continued advances were shown in logging, in which there were general increases. Statements were tabulated from 270 logging camps having 45,989 employees, or 15,728 more than in their last report. This gain was a much greater number of persons than that registered on December 1, 1932, when the index was many points lower; in fact, the additions to staffs were the largest ever reported in this record of thirteen years.

### Mining

*Coal.*—Employment in coal mines decreased at the beginning of December, 1,582 persons being released from the payrolls of the 96 co-operating operators, who had 23,866 employees. The Maritime and Prairie Provinces reported the decline, while increases were indicated in British Columbia. A small contraction had also been shown on the corresponding date in 1932; the index number then was higher.

*Metallic Ores.*—There was a minor increase in employment in metallic ore mines; 39 workers were taken on since November 1 by the 84 employers from whom information was received, and who had 18,892 persons on their pay lists. Curtailment had been indicated in December, 1932, when the number engaged by the firms reporting in this division was smaller.

*Non-Metallic Minerals other than Coal.*—A contraction in employment was noted in this industry, in which 79 firms furnished data showing that they employed 5,465 persons, as compared with 5,811 on November 1. Conditions were better than in the same month of 1932, when a similar decline had been noted.

### Communication

Small decreases in personnel were noted on telegraphs, but telephones showed minor improvement. On the whole, 22 persons were released from the payrolls of the co-operating companies and branches, which had 21,305 employees on the date under review. The index was lower than in the early winter of 1932.

### Transportation

*Street Railways and Cartage.*—Employment in this division was seasonally quiet in all provinces. Data were compiled from 185 firms whose staffs declined from 24,078 on November 1 to 23,871 at the beginning of December. This loss was less pronounced than that recorded on the same date in 1932, but the index then was higher.

*Steam Railways.*—The trend of employment in railway operation was downward, 98 employers and branches reporting 55,559 workers, as compared with 56,706 in the preceding month. There were decreases in all provinces. The index number was lower than on December 1, 1932, when rather larger reductions had been indicated.

*Shipping and Stevedoring.*—Curtailment was registered in shipping; a decrease of 488 persons was reported by the 93 co-operating employers, whose staffs aggregated 14,346. An increase had been noted on December 1, 1932, and the index then was higher.

### Construction and Maintenance

*Building.*—Employment in building construction showed a seasonal falling-off from the preceding month. Statements were compiled from 638 contractors employing 17,041 persons, as compared with 18,031 on November 1. The most extensive curtailment was in Quebec. Much greater shrinkage was reported on December 1, 1932, when employment was rather less active; this was partly due to the fact that greater unemployment relief works were under way in the month under review than in December of 1932.

*Highway.*—Important increases were noted in the staffs of the 335 highway contractors furnishing statistics, who employed 71,039 workers on December 1, as compared with 67,647 in the preceding month. Large numbers of workers were released on December 1, 1932, when the unemployment relief projects being carried on were on a smaller scale.

*Railway.*—Activity on railway construction and maintenance showed another seasonal decline which involved rather fewer workers than that noted on the same date in 1932; the index was then, however, slightly higher than on December 1, 1933. Statistics were received from 36 contractors and divisional superintendents whose staffs were diminished from 24,774 men on November 1 to 22,127 on the date under review. The most pronounced contractions were in the Prairie Provinces, although there were general losses throughout the country.

### Services

Improvement was reported by the 400 co-operating service firms, who had 22,536 employees, 268 more than in the preceding month. Hotels and restaurants continued to add to their labour forces. Employment was more active than on December 1, 1932, when declines had been recorded.

### Trade

Large seasonal increases were again noted in retail trade, but wholesale houses released some employees. Returns were received from 926 trading establishments with 87,982 employees, or 2,669 more than on November 1. The index was rather higher than on the same date in the preceding year, when somewhat smaller gains had been noted.

### TABLES

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area or industry, is of the total number of employees reported in Canada by the firms making returns on the date under review.

## (2) Unemployment in Trade Unions at the Close of November, 1933

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are occupied in work other than their own trades or who are idle due to illness are not considered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

with the exception of October, when the situation remained unchanged from the preceding month. Nova Scotia unions with an employment drop of over 4 per cent from October, attributed to mine closings in that province, showed the most unfavourable movement. In Saskatchewan activity was retarded by about 3 per cent, and was of a rather general nature throughout the province. Contributing declines of minor importance were also reflected by Ontario, Manitoba, and New Brunswick unions, the recession in the latter province being less than 1 per cent. Quebec unions, on the other hand, registered improve-

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

The present article on unemployment deals with conditions affecting local trade union members throughout Canada during November and is based on the reports furnished to the Department of Labour by 1,722 local unions including 146,946 members. Of these, 29,908, or a percentage of 20.4, were without work on the last day of the month, in contrast with percentages of 19.8 in October and with 22.8 in November, 1932. This slight increase in unemployment from October was the first to be noted since March, from which month there had been steady gains in activity,

ment of over 2 per cent and gains of lesser magnitude were indicated by Alberta and British Columbia unions. Compared with the situation in November, 1932, Nova Scotia unions reported a sharp drop in activity during the month reviewed, while in all other provinces employment tended upward, Quebec and Alberta unions with increases of nearly 5 per cent showing the greatest expansion.

Each month a separate compilation is made of unemployment in the largest city in each province, with the exception of Prince Edward Island. Conditions were much better for

Saint John members during November than in the previous month, and improvement on a considerably smaller scale was apparent among Montreal, Halifax, and Vancouver unions. In Toronto, Regina, and Edmonton, however, employment recessions of moderate proportions were reflected, Winnipeg reporting slight declines only. A much better volume of work was afforded members in Saint John and Vancouver than in November, 1932, and the situation for Montreal, Toronto and Edmonton unions was somewhat improved. In Halifax also the tendency was towards greater activity although the change was fractional. Unemployment for Regina unions, however, remained at exactly the same level as in November, 1932, and in Winnipeg the change manifest was but nominally adverse.

Appearing with this article is a chart which illustrates the trend of unemployment by months from January, 1927, to date. During November the curve showed a slight rise in level from the previous month, the first upswing to be noted since the close of March and indicative of a less favourable employment volume. Activity was, however, somewhat better than in November, 1932, when the course followed by the curve also tended upward.

Unemployment in the manufacturing industries during November remained in much the same volume as in the previous month according to the returns tabulated from a total of 454 local unions, combining a membership of 41,461 persons. Of these 8,505 or 20.5 per cent were without work at the end of the month, contrasted with 20.9 per cent in October. General labourers, wood workers and metal polishers all reported substantial increases in available employment from October and gains on a considerably smaller scale were reflected by textile workers and papermakers. In the iron and steel trades the percentage improvement was rather small, although affecting more workers than in any other group. Among glass and brewery workers, cigar makers, bakers and confectioners, and printing tradesmen also the trend of activity was upward. Marked increases in slackness from October were apparent among hat and cap, fur and leather workers, while in the garment trades also, employment was somewhat retarded. Compared with the situation in the manufacturing industries during November, 1932, when unemployment stood at 26.0, activity for wood and garment workers, metal polishers, hat and cap workers and cigar makers was substantially better during the month reviewed and among textile, and iron and steel workers, conditions

also were considerably improved. Increases in employment, on a smaller scale, were evident among paper makers, printing tradesmen and fur workers. Extensive curtailment of activity from November, 1932, was noted by leather workers, due to depression in the shoe trades. Among jewellery, glass and brewery workers, and general labourers also, a less favourable situation prevailed. Bakers and confectioners, however, reported the same

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1919.....	3.1	2.0	3.4	2.7	2.1	3.2	2.0	7.9	3.4

Nov., 1933.....	17.1	10.7	22.8	22.1	20.4	16.1	15.0	21.3	20.4

percentage of idleness in both months reviewed.

Employment conditions in the coal mining industry were quieter during November than in the preceding month, as shown by the reports tabulated from 51 unions with a membership aggregate of 14,234 persons. Of these, 1,811 or 12·7 per cent, were idle at the end of the month, contrasted with 8·1 per cent in October. An adverse employment movement was also noted from November, 1932, when 7·0 per cent of unemployed members were recorded. In Nova Scotia, due to a large extent to mine closings, activity was considerably retarded from October. Alberta and British Columbia miners, however, indicated a somewhat higher level of employment. Compared with the situation in the mining industry, as a whole, from November, 1932, Nova Scotia unions, as in the previous comparison, registered a pronounced drop in the volume of work available during the month reviewed, and in British Columbia recessions of much lesser importance occurred. Alberta miners, on the other hand, were more actively engaged than in November a year ago, the improvement being noteworthy. Short time work among miners, however, was quite prevalent.

Depression in the building and construction trades continued rather marked during November, with a slight unemployment increase apparent from October. This was manifest by the reports received from a total of 205 associations of building tradesmen, comprising a membership of 15,061 persons, 10,178, or 67·6 per cent, of whom were idle at the end of the month, contrasted with 65·4 per cent in October. Building activities were also somewhat curtailed from November, 1932, when 63·5 per cent of unemployed members was recorded. Carpenters and joiners reported employment recessions from October, involving the greatest number of workers, while among hod carriers and building labourers the percentage drop in activity recorded was substantial though affecting few members. Some falling off in available work was also apparent among granite and stone cutters, plumbers and steamfitters, bricklayers, masons and plasterers, steam shovelmen and tile layers, lathers and roofers. Activity for bridge and structural iron workers, on the other hand, was substantially improved from October and noteworthy gains occurred among painters, decorators and paperhangers. Electrical workers showed little change from the previous month, the tendency, however, being favourable. When a comparison is made with the returns for November, 1932, painters, decorators and paperhangers were afforded a much better employment volume during the

month surveyed, as were bridge and structural iron workers, and the situation for tile layers, lathers and roofers was considerably improved. Among plumbers and steamfitters, and hod carriers and building labourers activity also tended upward, though the gains were quite slight. Bricklayers, masons and plasterers, however, suffered severe employment losses from November a year ago and noteworthy curtailment was evident among granite and stonecutters. Recessions, on a more moderate scale, were reflected by electrical workers, while carpenters and joiners, and steam shovelmen showed but slight declines.

The situation in the transportation industries changed but slightly during November from either the previous month or November, 1932, unemployment standing at 13·2 in comparison with a percentage of 12·6 at the close of October and with 13·5 in November a year ago. The percentage for the month under review was based on the returns tabulated from 768 associations with an aggregate of 55,759 members, 7,364 of whom were idle at the end of the month. Steam railway employees, whose returns constituted 78 per cent of the entire group membership reported, were largely responsible for the less favourable tendency noted as compared with October, though among teamsters and chauffeurs also activity was very slightly reduced. There was, however, some betterment of conditions in the navigation industries from October. Among street and electric railway employees an unchanged situation from the previous month was noted. A slightly better volume of work was available to both steam railway employees and teamsters and chauffeurs than in November, 1932, which was in a large measure counteracted by the recessions apparent in navigation. Among street and electric railway employees, as in the previous comparison, the unemployment volume recorded remained the same as in November a year ago.

Adequate work was provided for retail clerks during November as shown by the 3 unions making returns with a membership of 1,008 persons. Employment was quite brisk for these workers also in October, when the percentage of unemployment was but fractional, while in November, 1932, nearly 6 per cent of the members reported were without work.

Activity for civic employees eased off slightly during November from the previous month, though conditions were somewhat better than in November, 1932, according to the reports tabulated from 75 associations with 6,766 members. Of these, 216 were idle on the last day of the month, a percentage of 3·2 contrasted with percentages of 1·6 in October and 5·6 in November, 1932.

TABLE II.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

Month	Fishing	Lumbering and Logging	Mining	Manufacturing	Vegetable products	Pulp and paper	Pulp and paper products	Printing, publishing and lithographing	Electric current	Wood products	Fibre, textiles and textile workers	Textile and carpet mill workers	Garment workers	Hat, cap and glove makers	Animal products	Iron and its products	Non-ferrous metals	Clay, glass and stone products	Mineral products	Miscellaneous manufacturing industries	Building and construction	Transportation	Shipping and steam navigation	Local transportation	Communication	Telegraph operation	Telephone operation	Trade (retail shop clerks)	Services	Governmental	Miscellaneous	All occupations

The trend of employment in the miscellaneous group of trades was upward during November from the previous month, the 114 unions from which reports were received, with 3,937 members, showing 16.8 per cent of unemployment, in comparison with 17.2 per cent in October. Theatre and stage employees, and unclassified workers accounted wholly for the favourable tendency from October, the situation for barbers remaining the same in both months, while among hotel and restaurant employees, and stationary engineers and firemen there was some slight slowing up of activity. Moderate improvement in conditions was noted in the miscellaneous group of trades from November, 1932, when 21.3 per cent of the members reported were without work, stationary engineers and firemen showing substantial employment gains during the month reviewed and hotel and restaurant, and theatre and stage employees, and barbers increases on a considerably smaller scale. Among unclassified workers there was slight curtailment of activity from November a year ago.

From fishermen 2 reports were received in November, covering a membership of 685

persons, 180 or 26.3 per cent of whom were idle on the last day of the month, contrasted with percentages of 24.8 in October and 27.0 in November, 1932.

The situation for lumber workers and loggers showed improvement during November, both over the previous month and November, 1932, the gains in the latter comparison being quite pronounced. This was manifest by the returns tabulated from 6 unions of these workers, including a membership of 719 persons, of whom 146 or 20.3 per cent were idle at the end of November compared with 24.3 per cent in October and with 46.5 per cent in November, 1932.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1932, inclusive, and also the percentage of unemployment by provinces for November of each year from 1919 to 1930, inclusive, and for each month from January, 1931 to date. Table II summarizes the returns in the various group of industries for the same months as in Table I.

### (3) Employment Office Reports for November, 1933

Gains of 24 per cent and 45 per cent in the volume of business transacted during November, 1933, were reported by the offices of the Employment Service of Canada over the previous month, October, and over November a year ago. Under both comparisons the group showing the greatest expansion in placements was construction and maintenance, this being due to relief work provided by the provincial and federal governments. Increases over October were also recorded in farming, logging and transportation, the latter nominal only, while services, manufacturing, trade and mining showed declines. When compared with the corresponding month in 1932, the only divisions to show reductions were manufacturing, trade and transportation, but the losses in these three were more than offset by the gain reported in services. Smaller increases were shown in farming and mining, but that in logging was noteworthy, although much below that in construction and maintenance, which represented almost 84 per cent of the total gain recorded.

The accompanying chart shows the trend of employment since January, 1931, as represented by the ratios of vacancies offered and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. It will be noted that the trend of the curve of vacancies and of placements in relation to applications rose

slightly over ten points during the month, and at the close of the period was about 13 points above that recorded at the end of November, 1932. The ratio of vacancies to each 100 applications was 58.4 during the first half and 62.5 during the second half of November, 1933, in contrast with the ratios of 39.4 and 48.8 during the corresponding periods of 1932. The ratios of placements to each 100 applications during the periods under review were 55.8 and 59.9 as compared with 37.2 and 47.0 during the corresponding month of 1932.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during November, 1933, was 1,659 as compared with 1,347 during the preceding month and with 1,148 in November, a year ago.

The average number of applications for employment received daily by the offices of the Service during the month under review was 2,747 in comparison with 2,733 in October, 1933, and with 2,607 during November, 1932.

The average number of placements made daily by the offices of the Service during November, 1933, was 1,589, of which 674 were in regular employment and 915 in work of one week's duration or less, as compared with a total daily average of 1,281 during the preceding month. Placements in November a year ago averaged 1,096 daily, consisting of 567 placements in regular and 529 in casual employment.

During the month of November, 1933, the offices of the Service referred 41,444 persons to vacancies and effected a total of 39,709 placements. Of these, the placements in regular employment were 16,842, of which 13,128 were of men and 3,714 of women, while placements in casual work totalled 22,867. The number of vacancies reported by employers was 34,271 for men and 7,204 for women, a total of 41,475, while applications for work numbered 68,660, of which 55,741 were from men and 12,919 from women. Reports for October, 1933, showed 33,659 positions available, 68,310 applications made, and 32,015 placements effected, while in November, 1932, there were recorded 28,683 vacancies, 65,165 applications for work,

## NOVA SCOTIA

There was a decline of 5 per cent in the number of positions offered through Employment Offices in Nova Scotia during November, 1933, as compared with the preceding month, and 50 per cent in comparison with the corresponding month of 1932. Placements also were nearly 10 per cent less than in October and over 51 per cent less than in the corresponding month of the previous year. The large decline in placements from November, 1932, was due to fewer persons being sent to road construction and other relief projects. There was an increase in services and nominal changes only, in all other groups. Placements

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o-o-o-o-o-o

and 27,383 placements in regular and casual employment. The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1923, to date:—

Year	Placements		
	Regular	Casual	Totals
1923.....	347,165	115,387	462,552
1924.....	247,425	118,707	366,132
1925.....	306,804	106,021	412,825
1926.....	300,226	109,929	410,155
1927.....	302,723	112,046	414,769
1928.....	334,604	135,724	470,328
1929.....	260,747	137,620	398,367
1930.....	187,872	180,807	368,679
1931.....	175,632	295,876	471,508
1932.....	153,771	198,443	352,214
1933 (11 months).....	156,233	158,057	314,290

in construction and maintenance numbered 697 and in services 354. Of the latter, 277 were of household workers. Placements in regular employment numbered 29 of men and 71 of women.

## NEW BRUNSWICK

Orders received at Employment Offices in New Brunswick during November, 1933, called for nearly 30 per cent more workers than in the preceding month but less than 1 per cent fewer than during November a year ago. Similar percentages of change were reported in placement. Placements in logging and services were higher than in November, 1932, but these gains were offset by a decline in con-

\*877 Placements effected by offices since closed.

struction and maintenance. The changes in other groups were nominal only. Placements by industrial divisions included: manufacturing, 23; logging, 122; construction and maintenance, 533; and services, 530, of which 351 were household workers. There were 153 men and 49 women placed in regular employment during the month.

#### QUEBEC

During the month of November, 1933, positions offered through Employment Offices in the province of Quebec were nearly 6 per cent less than in the preceding month but over 43 per cent above the corresponding month of 1932. Placements also were over 3 per cent less than in October, but nearly 51 per cent above November a year ago. The substantial gain in placements over November, 1932, was due to large increases in logging and services. Trade also showed improvement. Declines were reported in construction and maintenance, manufacturing and farming. Placements by industrial divisions included: manufacturing, 51; logging, 574; construction and maintenance, 265; trade, 95; and services, 1,707, of which 1,452 were of household workers. There were 1,056 men and 1,188 women placed in regular employment during the month.

#### ONTARIO

Opportunities for employment, as indicated by orders received at Employment Offices in Ontario during November, 1933, were over 46 per cent higher than in the preceding month and 109 per cent above the corresponding month of 1932. There was a gain of nearly 49 per cent in placements when compared with October, and of 105 per cent when compared with November a year ago. This substantial increase was due to large numbers of men being provided with relief work on highway construction. Gains were also reported in logging and manufacturing, but these increases were offset by reductions in services, trade and farming. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 466; logging, 1,084; farming, 277; transportation, 180; construction and maintenance, 15,883; trade, 311; and services, 2,644, of which 1,586 were of household workers. During the month 2,959 men and 1,116 women were placed in regular employment.

#### MANITOBA

Employment Offices in Manitoba received orders for nearly 16 per cent more workers than in the preceding month and nearly 17 per cent more than during the corresponding

month of 1932. There was a gain of nearly 22 per cent in placements when compared with October, and of over 31 per cent in comparison with November, 1932. Farm placements were considerably higher than during November a year ago and logging also showed a substantial gain. There were, however, fewer placements in manufacturing and services. Placements by industrial divisions included: logging, 512; farming, 1,958; construction and maintenance, 924; and services, 582, of which 502 were of household workers. Regular employment was found for 3,144 men and 361 women.

#### SASKATCHEWAN

The number of positions offered through Employment Offices in Saskatchewan during November, 1933, was 74 per cent higher than in the preceding month, but less than 1 per cent above the corresponding month of the previous year. There was an increase of nearly 68 per cent in placements when compared with October, but a decline of less than 1 per cent when compared with November, 1932. All industrial divisions, except farming and trade, showed improvement over November a year ago, the loss in the latter group being small. Of the gains in all other divisions, that in construction and maintenance was the largest. Placements by industrial groups included: manufacturing, 24; logging, 68; farming, 2,186; mining, 51; construction and maintenance, 774; trade, 27; and services, 696, of which 569 were of household workers. Placements in regular employment numbered 2,758 of men and 469 of women.

#### ALBERTA

There was a decline of over 23 per cent in the number of positions offered through Employment Offices in Alberta during November, 1933, when compared with the preceding month, but a gain of nearly 38 per cent in comparison with the corresponding month of 1932. Placements also were over 23 per cent less than in October, but over 39 per cent above November, 1932. This increase in placements over November a year ago was due to work provided in relief of unemployment on road construction, although a small gain was also reported in mining. Of the losses in all other groups, that in farming was the largest. Industrial divisions in which most of the placements were effected during the month were: logging, 41; farming, 316; mining, 87; construction and maintenance, 1,494; and services, 431, of which 310 were of household workers. There were 1,487 men and 238 women placed in regular employment during the month.

## BRITISH COLUMBIA

During the month of November, 1933, orders received at Employment Offices in British Columbia called for over 17 per cent less workers than in the preceding month, but nearly 6 per cent more than during November, 1932. There was a decline of 17 per cent in placements when compared with October, but a gain of nearly 8 per cent in comparison with November of the previous year. Increased placements in highway construction accounted for the gain over November, 1932, although services, manufacturing and farming also showed improvement. These increases were offset in part by a decline in logging and smaller losses in trade and transportation. Placements by industrial divisions included: manufacturing, 27; logging, 60; farming, 42; construction and maintenance, 2,744; and services, 654, of which 420 were of household workers. During the month 1,542 men and 222 women were placed in regular employment.

## Movement of Labour

During the month of November, 1933, the offices of the Employment Services of Canada effected 16,842 placements in regular employment, 8,443 of which were of persons for whom the employment found was outside the immediate vicinity of the offices at which they were registered. Of the latter, 860 were granted the Employment Service reduced transportation rate, 454 going to points within the same province as the despatching office and 406 to other provinces. The reduced transportation rate, which is 2.7 cents per mile with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

In Quebec, 157 persons took advantage of the Employment Service reduced transportation rate during November, 77 of whom went to provincial situations and 80 outside the province. The transfers provincially were of bushmen travelling from Quebec City to employment within the same zone. The Hull office was instrumental in the despatch of all persons going outside the province, 62 of whom were bushmen for the Sudbury zone, 17 bushmen for the Timmins zone and one a logging camp cook conveyed to Sault Ste. Marie. Ontario offices granted 273 certificates for reduced transportation during November, all to points within the province. This labour movement

was entirely of workers in the lumbering and logging industries, 219 going to centres in the Timmins zone. Of these 110 travelled from Pembroke, 80 from North Bay, 19 from Sudbury and 10 from Ottawa. For employment within its own zone the Sudbury office despatched one logging camp cook and one tractor operator for logging activities, while to the same zone also were shipped 15 bushmen from Ottawa and one bushman from North Bay. In addition, the Port William office transferred 25 bushworkers and Port Arthur 11 bushworkers to centres within their own zones. The Winnipeg office effected all transfers in Manitoba during November, which were 330 in number, 4 provincial and 326 interprovincial. The former were destined to the Winnipeg zone and included one surveyor, 2 tractor operators and one hotel waitress. Of the workers going outside the province all were for situations in Ontario, the Port Arthur zone receiving 319 bushmen, 3 housekeepers and one engineer, and Timmins 3 bushmen. Workers in Saskatchewan who travelled at the Employment Service reduced transportation rate during November totalled 52. Of these 51 were bushmen conveyed from Prince Albert to centres within the same zone. In addition, the Saskatoon office despatched one farm hand to Swift Current. The transfers at the reduced rate in Alberta during November were 41 in number, all provincial. For employment at various centres within its own zone Edmonton despatched 22 bushworkers, 8 mine workers, 4 farm hands, one farm household worker and 2 bushmen. From Edmonton in addition one farm hand was transported to Drumheller, which zone was also the destination of 3 mine workers travelling from Calgary. Business transacted by British Columbia offices during November involved the issue of 7 certificates to centres within the province. These were granted at the Vancouver office to one sawmill engineer and one farm housekeeper going to Kamloops, one mine cook and one tourist camp housekeeper to Penticton, and one hotel cook and 2 mine workers bound for employment within the Vancouver zone.

Of the 860 workers who travelled at the Employment Service reduced transportation rate during November 455 were carried by the Canadian National Railways, 367 by the Canadian Pacific Railway, 33 by the Temiskaming and Northern Ontario Railway, 3 by the Northern Alberta Railway and 2 by the Pacific Great Eastern Railway.

#### (4) Building Permits issued in Canada during November, 1933

The aggregate value of the construction represented by the building permits issued by 61 cities during November was \$1,609,874. This was a seasonal decline of \$152,473 or 8.7 per cent as compared with the October total of \$1,762,347, and a reduction of \$943,499, or 37.0 per cent in comparison with the November, 1932, figure of \$2,553,373.

Some 50 cities furnished detailed statistics, showing that they had issued over 150 permits for dwellings estimated to cost more than \$600,000, and about 970 permits for other buildings estimated at almost \$875,000. In addition, authority was granted for an engineering project valued at \$30,282. During October, authority was granted for the erection of about 220 dwellings and 1,550 other buildings, estimated to cost approximately \$685,000 and \$1,000,000, respectively.

Nova Scotia, New Brunswick, and Ontario reported increases in the value of the building authorized as compared with October; the most marked gain was that of \$247,360 or 34.7 per cent in Ontario. Reductions were indicated in the remaining provinces, that of \$237,875, or 40.1 per cent in Quebec being the largest.

As compared with November, 1932, Manitoba and Alberta reported increases, while the greatest decline in this comparison was that of \$593,507, or 38.2 per cent in Ontario.

Of the four largest centres, Montreal and Vancouver recorded decreases in the value of the building authorized in November as compared with the preceding month, and also with November, 1932; in Toronto, the aggregate value was higher than in October, 1933, but lower than in November of last year, while in Winnipeg there was a reduction in the former but an improvement in the latter comparison. Of the other centres, New Glasgow, Fredericton, Sherbrooke, Westmount, Belleville, Brantford, Chatham, London, Oshawa, Owen Sound, Peterborough, Strat-

ford, Sarnia, Windsor, Kamloops and Nanaimo reported greater building authorizations than in either comparison.

*Cumulative Record for First Eleven Months, 1920-1933.*—The following table shows the value of the building authorized by 61 cities during November and in the first eleven months of each year since 1920, as well as index numbers for the latter, based upon the total for 1926 as 100. The January-November index numbers of wholesale prices of building materials in these years are also given (average 1926 = 100).

Year	Value of permits issued in November	Value of permits issued in first eleven months	Indexes of value of permits issued first eleven months (1926=100)	Average indexes of wholesale prices of building materials in first eleven months (Average 1926=100)
	\$	\$		
1933.....	1,609,874	19,653,928	13.6	78.1
1932.....	2,553,373	40,750,142	28.1	77.4
1931.....	7,282,117	104,327,739	72.0	82.1
1930.....	11,821,292	150,639,044	104.2	91.4
1929.....	16,171,400	220,255,867	152.0	99.1
1928.....	15,830,836	203,010,555	140.1	96.9
1927.....	12,857,622	172,858,176	119.3	96.2
1926.....	9,975,451	144,877,789	100.0	100.1
1925.....	7,988,765	117,665,590	81.2	102.9
1924.....	10,212,908	120,119,829	82.9	107.1
1923.....	8,228,206	126,547,365	87.3	111.8
1922.....	11,182,030	138,698,005	95.7	108.6
1921.....	12,192,414	111,257,084	76.8	123.9
1920.....	5,627,949	112,175,268	77.4	144.3

The aggregate for the first eleven months of this year was lower than in 1932 and other years since 1920, but in this connection it should be noted that the average index numbers of wholesale prices of building materials were also much lower than in any other of these twelve years except 1932; from the high point of 144.3 in 1920, this index had declined to 78.1 in the same eleven months of the present year, or by 46.9 per cent.

The significance of non-mechanical factors in labour productivity and displacement is discussed in an article appearing in the *Monthly Labor Review* (Washington), November, 1933. It is shown that while the utilization of machinery and mechanical power has been the outstanding factor operating to increase labour productivity since the beginning of the machine age, there are other factors that have often been of equal

and sometimes of even greater importance. Especially significant are such factors as the improvement of working conditions and the adjustment of working time; selection of personnel; synchronization of motion; improved co-operation; better arrangement of tools or machinery; the discovery and installation of improved processes; and the standardization of materials, processes, and finished products.

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

### Great Britain

**T**HE British *Ministry of Labour Gazette*, December, 1933, summarized the employment situation as follows:—

Employment at November 20, 1933, showed a further improvement. It continued to improve in coal mining, engineering, shipbuilding and ship repairing, vehicle building, and miscellaneous metal goods manufacture; in the cotton, carpet, pottery and glass industries; and in woodworking and furniture manufacture. There was also an improvement in iron and steel, tinplate, silk and artificial silk manufacture, and in the distributive trades.

On the other hand, the seasonal decline continued in building, public works contracting, the hotel, boarding house and transport services, and in hat and cap manufacture. There was also some set-back in tailoring and dressmaking.

In the South of England there was little change (apart from some decline in the South-Eastern counties outside London), and employment continued fair to moderate on the whole. In the Midlands there was a further substantial improvement, and employment was moderate. There was a slight improvement also in the North of England, but employment in that area was still bad. In Scotland it showed a decline, and continued bad; in Wales employment showed a substantial improvement, but was still very bad. Employment remained bad in Northern Ireland.

Among the workpeople, numbering approximately 12,883,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at November 20, 1933 (including those temporarily stopped as well as those wholly unemployed), was 17·9, as compared with 18·1 at October 23, 1933, and with 22·2 at November 21, 1932. The percentage wholly unemployed at November 20, 1933, was 15·3, as compared with 15·3 at October 23, 1933; while the percentage temporarily stopped was 2·6, as compared with 2·8. For males alone, the percentage at November 20, 1933, was 21·1, and for females, 9·4; at October 23, 1933, the corresponding percentages were 21·4 and 9·5.

At November 20, 1933, the number of persons on the Registers of Employment Exchanges in Great Britain was 1,855,808 wholly unemployed, 340,135 temporarily stopped, and 84,074 normally in casual employment, making a total of 2,280,017. This was 18,736 less than a month before, and 519,789 less than a year

before. The total included 1,894,762 men, 50,673 boys, 298,589 women and 35,993 girls.

In Great Britain and Northern Ireland, the total number of persons on the Registers of Employment Exchanges at November 20, 1933, was 2,341,693.

### United States

*Manufacturing Industries.*—Index numbers showing the trend of employment and pay rolls in manufacturing industries are computed monthly by the Bureau of Labor Statistics of the U.S. Department of Labor from reports supplied by representative establishments in 89 of the principal manufacturing industries of the United States and covering the pay period ending nearest the 15th of the month. These indexes of employment and pay rolls are figures showing the percentage represented by the number of employees or weekly pay rolls in any month compared with employment and pay rolls in a selected base period. The year 1926 is the Bureau's index base year for manufacturing industries, and the average of the 12 monthly indexes of employment and pay rolls in that year is represented by 100 per cent.

Employment in manufacturing industries decreased 3·5 per cent between October and November, 1933, and pay rolls decreased 6·2 per cent over the month interval. The November index of employment was 71·4 as compared with 74·0 in October and the index of pay rolls in November was 50·3, compared with 53·6 in the preceding month.

A comparison of employment in November, 1933, with November, 1932, shows that employment in November of the current year is 20·2 per cent above the level of the November, 1932, employment index (59·4). A similar comparison of the November, 1933, pay roll index with the November, 1932, index (38·6) shows a gain of 30·3 per cent in pay rolls over the year interval.

These declines in employment and pay rolls in November, 1933, mark the first decreases to occur in either of these items since March. Decreases in both employment and pay rolls between October 15th and November 15th have been reported each year since 1923, with the single exception of the year 1925 in which a slight gain in employment combined with unchanged pay roll totals was reported. The decreases of 3·5 per cent in employment and 6·2 per cent in pay rolls in the current report, however, are greater than the average declines shown in November of preceding years. The changes in employment in November over the preceding 10-year period show an

average decrease of 1.3 per cent and the changes in pay rolls over the same interval show an average decrease of 3.3 per cent.

These changes in employment and pay rolls in November, 1933, are based on reports supplied by 18,047 establishments in 89 of the principal manufacturing industries of the United States. These establishments reported 3,128,908 employees on their pay rolls during the pay period ending nearest November 15 whose combined weekly earnings were \$56,393,962. The employment reports received from these co-operating establishments cover approximately 50 per cent of the total wage earners in all manufacturing industries of the country.

Thirty of the 89 manufacturing industries surveyed reported increased employment in November, 1933, compared with October, and 24 industries reported increased pay roll totals. The most pronounced increases in employment and pay rolls over the month were shown in the dyeing and finishing textiles industry, in which the termination of the strike which had been in progress for a number of weeks resulted in the return to employment of large numbers of workers. The beet sugar industry, reflecting seasonal activity, reported a gain of 16.2 per cent in employment. The iron and steel forgings industry reported a gain of 8.4 per cent and the typewriter industry reported a gain of 8 per cent in number of employees. The agricultural implement industry reported an increase of 7.2 per cent in employment; the machine tool industry, 6.7 per cent; the engine-tractor-turbine industry, 5.5 per cent; and the aircraft industry, 5.4 per cent. The radio industry and the silverware industry reported increases in employment of 4.2 per cent and 4.0 per cent, respectively. Other industries in which large numbers of wage earners are employed and in which increased employment was reported in November were cigars and cigarettes, newspapers, book and job printing, glass, petroleum refining, and chemicals. The most pronounced decreases in employment between October and November were reported in the following industries: Plumbers' supplies (15.7 per cent), stamped and enamelled ware (14.5 per cent), cottonseed oil-cake-meal (13.2 per cent), millinery (13.1 per cent), boots and shoes (12.9 per cent), women's clothing (12.2 per cent), automobiles (11.8 per cent), and woollen and worsted goods (11.2 per cent). The declines in a number of these industries were of seasonal character. Substantial declines also were reported in such industries of major importance as: Furniture, men's clothing, knit goods, sawmills, leather, cotton goods, shipbuilding, and iron and steel.

*Non-Manufacturing Industries.*—Eight of the 16 non-manufacturing industries surveyed monthly by the Bureau of Labor Statistics reported increased employment in November as compared with October, and 5 industries reported increased pay roll totals. The most pronounced gains in employment over the month interval were in the coal mining industries. The anthracite mining industry reported 7.3 per cent more employees in November than October, coupled, however, with sharply decreased earnings due to the All-Saints Day and Armistice Day holidays in the pay period reported. The bituminous coal mining industry, reflecting seasonal demands and the settlement of strikes in certain areas, reported a gain of 10 per cent in employment between October and November. Employment in the crude petroleum producing industry increased 2.3 per cent over the month interval. Reports supplied by 18,666 retail trade establishments showed a gain of 2.2 per cent in employment between October and November. Under this retail classification, the group composed of department-variety-general merchandise stores and mail order houses showed a gain of 3.7 per cent between October and November. The group of grocery stores and meat markets reported a decline of 0.1 per cent and the combined total of the remaining reporting retail establishments showed a small loss in employment. The gains in the three industries comprising the public utilities group (telephone and telegraph, power and light, and electric-railroad and motor bus operation) ranged from 0.3 per cent to 0.5 per cent, and the banks-brokerage-insurance-real estate group showed an increase of 0.2 per cent in employment from October to November. The most pronounced percentage decline over the month interval (45.1 per cent) was a seasonal decrease in employment in the canning and preserving industry, which regularly registers sharp declines at this season of the year. The building construction industry reported a decrease of 7.3 per cent in employment. This decline reflects the change in employment based on reports supplied by 11,076 contractors engaged on public and private projects not aided by Public Works funds. The dyeing and cleaning industry reported 6.8 per cent fewer employees in November than in October. The quarrying and non-metallic mining industry and laundry industry reported decreases in employment of 3.9 per cent and 3.5 per cent, respectively. The hotel industry reported a loss in employment of 1.6 per cent over the month interval and the decreases in the two remaining industries (wholesale trade and metalliferous mining) were two-tenths of 1 per cent or less.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government with respect to contracts "for construction, remodelling, repair or demolition of any work" is set forth in an Act of Parliament adopted on May 30, 1930, entitled "The Fair Wages and Eight-Hour Day Act" (chapter 20-21, Geo. V). The full text of this measure appeared in the *LABOUR GAZETTE*, April, 1930, page 383. The Fair Wages and Eight-Hour Day Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repairs or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(a) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or, except in cases of emergency, as may be approved by the Minister.

(2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication or manufacture is carried on in any established plant or factory other than a plant or factory established for the purposes of the work contemplated.

The Fair Wages Policy was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by Order in Council of April 9, 1924. The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the wages rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of contract.

In addition to the requirements of the Fair Wages and Eight-Hour Day Act, government contracts for the construction, remodelling,

repair or demolition of any work, contain a number of other provisions for the protection of the workmen employed, which are sanctioned by the foregoing Orders in Council.

It is further provided in the foregoing Orders in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings; harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees; mail bags, letter boxes, and other postal stores; and any other articles and things hereinafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions, which are referred to in the Orders in Council as "B" conditions (the Conditions of the Fair Wages Orders in Council with reference to building and construction works being designated as "A" conditions), include the following Fair Wages Clause:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

Both in the case of contracts for building and construction work, and in the "B" conditions sanctioned by Orders in Council applicable to contracts for the manufacture of certain classes of supplies, the Minister of

Labour is empowered to determine any questions which may arise as to wages rates and working hours.

The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed claim therefore may be filed with the Minister of the Department with which the contract has been made and payment of such claim may be made by the latter.

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially directed by the Fair Wages Orders in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of certain classes of supplies listed in the Fair Wages Orders in Council it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any disputes which may arise.

During the past month statements were received in the Department of Labour showing that the following contracts, containing fair wages conditions, have been recently executed by the Government of Canada:—

#### DEPARTMENT OF NATIONAL DEFENCE

##### *Contracts in Group "B" (Manufacture and Supply of Clothing, Interior Fittings, etc.)*

The following is a statement of contracts awarded by the Department of National Defence during the month of December, 1933, for various classes of manufactured goods, which contracts included in all cases the "B" labour conditions above referred to:—

Goods Contracted for	Contractor
Serge, drab.....	Rosamond Woollen Co., Ltd., Almonte, Ont.
Oilskin coats and sou-westers	Tower Canadian Co., Toronto, Ont.
Pillows.....	Parkhill Bedding Co., Ltd., Winnipeg, Man.
Work pants, cloth.....	Woods Manufacturing Co., Ltd., Ottawa, Ont.
Uniform jackets.....	Grant-Holden-Graham, Ltd., Ottawa, Ont.
Uniform trousers.....	Workman Uniform Co., Ltd., Montreal, P.Q.
Household soap.....	Guelph Soaps, Ltd., Guelph, Ont.
Jackets and trousers, drill...	Grant-Holden-Graham, Ltd., Ottawa, Ont.
Caps.....	Progress Brand Cap Co., Mont- real, P.Q.
Winter underwear.....	Galt Knitting Co., Galt, Ont.
Winter underwear.....	Joseph Simpson Sons, Ltd., Toronto, Ont.
Winter underwear.....	Penmans Ltd., Montreal, P.Q.
Winter underwear.....	Zimmerkmit Ltd., Hamilton, Ont.
Leather gloves.....	Matthew Bastien, Lorette- ville, P.Q.
Laundry soap.....	Beaver Soap & Chemicals Ltd., Winnipeg, Man.
Laundry soap.....	Guelph Soaps, Guelph, Ont.
Cylinder heads for aeroplane engines.	Fleet Aircraft of Canada, Ltd., Fort Erie, Ont.
Blue cloth.....	Paton Mig. Co., Montreal, P.Q.
Boots, ankle.....	Tabbutt Shoe & Leather Co., Three Rivers, P.Q.

These contracts involved a total expenditure of \$45,947.00.

#### DEPARTMENT OF PUBLIC WORKS

##### *Contract in Group "B" (Interior Fittings, etc.)*

Installation of interior fittings of wood, bronze, marble, etc., in the public building at Windsor, Ontario. Name of contractors, Canadian Office & School Furniture Ltd., Preston, Ont. Date of contract, November 11, 1933. Amount of contract, \$15,852.00. The "B" labour conditions were inserted in the contract.

## POST OFFICE DEPARTMENT

Following is a statement of payments made in December, 1933, for supplies ordered by the Post Office Department under contracts which were subject to regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages, and the performance of the work under proper sanitary conditions:—

Nature of Work	Amount
<i>Making metal dating stamps and type, brass crown seals, cancellers, etc.:</i>	
Pritchard-Andrews Co. of Ottawa, Ltd. . . . .	\$ 487 70
<i>Making and repairing rubber stamps, daters, etc.:</i>	
Pritchard-Andrews Co. of Ottawa, Ltd. . . . .	257 38
<i>Making and supplying letter carriers' uniforms:</i>	
Grant-Holden-Graham Ltd., Ottawa, Ont. . . . .	44 00
Jay Wolfe Incorporated, Montreal, P.Q. . . . .	594 00

Nature of Orders	Amount
Miner Rubber Co., Ltd., Granby, P.Q. . . . .	17 54
Tower Canadian Ltd., Toronto, Ont. . . . .	1,109 41
Hamilton Uniform Cap Co., Hamilton, Ont. . . . .	27 95
Needlecraft Mills Ltd., St. Hyacinthe, P.Q. . . . .	497 13
Paton Manufacturing Co., Ltd., Montreal, P.Q. . . . .	297 85
Kaufman Rubber Co., Ltd., Kitchener, Ont. . . . .	1,197 72
<i>Mail Bag Fittings:</i>	
C. Richardson & Co., St. Mary's, Ont. . . . .	478 90
F. W. Carling, Ottawa, Ont. . . . .	1,696 00
<i>Scales:</i>	
Pritchard-Andrews Co. of Ottawa, Ltd., Ottawa. . . . .	48 75
<i>Letter Boxes:</i>	
Engine Works & Trading Inc., Montreal, P.Q. . . . .	439 04
<i>Ink:</i>	
J. E. Poole Co., Toronto, Ont. . . . .	376 10
Pritchard-Andrews Co. of Ottawa, Ltd., Ottawa, Ont. . . . .	91 70

## Fair Wages Conditions in Harbour Commission Contracts

Under the Fair Wages Order in Council it is provided that certain conditions, referred to therein as "A" Conditions, shall, as far as practicable, be observed by the department or departments of the Government of Canada in connection with all agreements made by the Government involving the grant of Dominion public funds in the form of subsidy, advance, loan or guarantee for any of the purposes mentioned. Under this authority, fair wages conditions are prepared from time to time in the Department of Labour for insertion in contracts awarded by the Harbour Commissioners throughout Canada. The labour conditions in question are similar to those which are applicable to contracts awarded by the several departments of the Dominion Government and include either a fair wages schedule or the General Fair Wages Clause.

The Department of Labour has been notified that the following contracts have been awarded under the above-mentioned conditions:—

Halifax Harbour Commissioners,  
Halifax, N.S.

Structural steel work in connection with the reconstruction of Pier No. 2, Halifax, N.S. Name of contractors, Robb Engineering Works, Ltd., Amherst, N.S. Date of contract, October, 1933. Amount of contract, \$70,000. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of Wages	Hours of Labour
	Not less than	Not more than
	per hour	per day
	\$ cts	
Bricklayers and masons. . . . .	0 97½	8
Plasterers. . . . .	0 70	8
Electrical workers. . . . .	0 80	8
Riggers. . . . .	0 50	8
Labourers. . . . .	0 35	8
Structural steel workers. . . . .	0 65	8
Carpenters. . . . .	0 55	8
Blacksmiths. . . . .	0 60	8
Blacksmiths' helpers. . . . .	0 40	8
Cement finishers—floor. . . . .	0 60	8
Cement finishers—wall. . . . .	0 70	8
Concrete mixer operator. . . . .	0 50	8
Hoisting engineers. . . . .	0 80	8
Hoisting engineers, certificated. . . . .	0 75	8
Dinkey drivers—gas. . . . .	0 45	8
Dinkey drivers—steam. . . . .	0 50	8
Fireman. . . . .	0 40	8
Machinists. . . . .	0 65	8
Plumbers and steamfitters. . . . .	0 70	8
Plumbers' and steamfitters' helpers. . . . .	0 40	8
Painters and glaziers. . . . .	0 50	8
Sheet metal workers. . . . .	0 70	8
Driver, horse and cart. . . . .	4 50	8
Driver, team and wagon. . . . .	6 50	8
	per hour	
Motor truck driver. . . . .	0 40	8
Air compressor operator. . . . .	0 50	8
Paving breaker runner. . . . .	0 45	8
Drill runner. . . . .	0 45	8
	per month and found	
Tow boat captain. . . . .	125 00	
Tow boat engineer, 1st class. . . . .	125 00	
Tow boat engineer, 2nd class. . . . .	100 00	
Deckhand. . . . .	45 00	
	per hour	
Dump scow men. . . . .	0 45	8
Acetylene burners. . . . .	0 45	8
Roofers. . . . .	0 55	8

N.B.—In any cases where, by agreement or current practice, the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this work.

Building work in connection with the re-construction of Pier No. 2, Halifax, N.S. (including brick and tile work, plastering, timber roof, roofing, metal siding and steel sash). Name of contractors, McDonald Construction Co., Ltd., Halifax, N.S. Date of contract, October, 1933. Amount of contract, approximately \$96,000. The foregoing fair wages schedule was also inserted in this contract.

Installation of heating and pipe systems in Pier No. 2, Halifax, N.S. Name of contractor, Mr. G. L. Allen, Halifax, N.S. Date of contract, November 15, 1933. Amount of contract, \$9,885. The above-mentioned fair wages schedule was also inserted in this contract.

Electrical work at Pier No. 2, Halifax, N.S. Messrs. Carter & Smith, Halifax, N.S. Date of contract, November, 1933. Amount of contract, \$5,900. The above-mentioned fair wages schedule was also inserted in this contract.

Repairs to concrete walls of Pier No. 2, Halifax, N.S. Name of contractors, Gunite & Waterproofing Co., Montreal, P.Q. Amount of contract, \$3,600 (cost plus). Date of contract, November, 1933. The above-mentioned fair wages schedule was also inserted in this contract.

Installation of a complete sprinkler system in upper floor of shed, Pier No. 2, Halifax, N.S. Name of contractors, "Automatic" Sprinkler Co. of Canada, Ltd., Montreal, P.Q. Amount of contract, \$25,888. Date of contract, October, 1933. The above-mentioned fair wages schedule was also inserted in this contract.

Installation of a freight elevator in Pier No. 2, Halifax, N.S. Name of contractors, Otis-Fensom Elevator Co., Hamilton, Ont. Date of contract, October, 1933. Amount of contract, \$4,525. The above-mentioned fair wages schedule was also inserted in this contract.

Supply of cargo doors for Pier No. 2, Halifax, N.S. Name of contractors, Richards-Wilcox Co., Ltd., London, Ont. Date of contract, October, 1933. Amount of contract, \$28,055. The above mentioned fair wages schedule was also inserted in this contract.

Rebuilding six damaged escalators and re-erecting same, Pier No. 2, Halifax, N.S. Name of contractors, Stephens-Adamson Mfg. Co., Belleville, Ont. Date of contract, October, 1933. Amount of contract, \$6,586. The above-mentioned fair wages schedule was also inserted in this contract.

Laying asphalt paving on upper floor of Pier No. 2, Halifax, N.S. Name of contractors, Standard Paving (Nova Scotia) Ltd.,

Halifax, N.S. Date of contract, October 21, 1933. Amount of contract, \$13,560. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of Wages	Hours of Labour
	— Not less than	— Not more than
	per hour	per day
	\$ cts.	
Gasoline roller operator.....	0 50	8
Asphalt rakers.....	0 40	8
Plant engineer.....	0 60	8
Crane operator.....	0 60	8
Asphalt mixer man.....	0 45	8
Fireman.....	0 40	8
Truck driver.....	0 40	8
Smoother.....	0 45	8
Labourers.....	0 35	8

N.B.—In any cases where, by agreement or current practice, the working hours of any class of workers are less than 48 a week, such lesser hours, shall not be exceeded on this contract.

#### Saint John Harbour Commissioners, Saint John, N.B.

Construction of 3 steel and concrete sheds and grain conveyer galleries, West Saint John, N.B. Name of contractors, The St. John Drydock and Shipbuilding Co., Ltd., Saint John N.B. Date of contract, July 10, 1933. Amount of contract, approximately \$1,013,000. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of Wages	Hours of Labour	
	— Not less than	— Not more than	
	per hour	per day	per week
	\$ cts.		
Carpenters.....	0 60	8	44
Electrical workers.....	0 60	8	44
Hoisting engineers.....	0 60	8	44
Labourers.....	0 35	8	48
Painters.....	0 35	8	44
Plumbers and steamfitters.....	0 60	8	44
Sheet metal workers.....	0 60	8	44
Riggers.....	0 50	8	44
Roofers, metal.....	0 50	8	44
Roofers, felt and gravel.....	0 50	8	44
Blacksmiths.....	0 55	8	44
Blacksmiths' helpers.....	0 40	8	44
Structural iron workers.....	0 65	8	48
Bricklayers.....		8	44
Cement finishers.....		8	44
Plasterers.....		8	44
Masons.....		8	44

NOTE.—Bricklayers, masons, plasterers and cement finishers who may be employed on this work and for whom no wages rates have been specified shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged provided that wages shall in all cases be such as are fair and reasonable.

The 44-hour week is for the months of June, July, August and September only. Forty-eight hours thereafter.

Installation of equipment in the grain conveyer galleries at West Saint John, N.B. Name of contractors, J. S. Metcalf Co., Ltd., Montreal, P.Q. Date of contract, October 31, 1933. Amount of contract, \$390,000. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of Wages	Hours of Labour
	Not less than	Not more than
	per hour	per day
	\$ cts.	
Millwrights.....	0 60	8
Millwright helpers.....	0 40	8
Labourers.....	0 35	8

Excavation in earth and rock at West Saint John, N.B. Name of contractors, Broderick contractors, Ltd., Saint John, N.B. Date of contract, November 14, 1933. Amount of contract, \$48,000. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of Wages	Hours of Labour
	Not less than	Not more than
	per hour	per day
	\$ cts.	
Common labour.....	0 35	8
Drillers.....	0 45	8

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Logging

THUNDER BAY DISTRICT, ONTARIO.—CERTAIN TIMBER OPERATORS, MEMBERS OF THE LAKEHEAD TIMBERMEN'S ASSOCIATION, AND THEIR EMPLOYEES.

Agreement made following the strike reported in the LABOUR GAZETTE, December, 1933, page

1164, and this issue, page 17. Agreement to be in effect from December 18, 1933, until the end of the 1933-1934 season.

Provision is made for workers to hold meetings in the camp and to elect a camp committee from men engaged by the Companies in the woods. No discrimination against strikers or union members by employers, or against non-union members by the committee. The companies reserve the right not to recognize any union. An organizer may visit camps provided he has proper credentials. Workers to have the right to donate money to various unions and societies and this money to be deducted from the pay cheques. Workers to have right to have a grievance committee in the city for the purpose of adjusting and investigating any grievance.

Hours for employees other than the camp staff: 10 per day as a general rule, and any man asked to work an abnormal number of hours a day may refer his case to the camp committee. A month to consist of 26 working days, and any work over 26 days to be paid *pro rata*.

Wages—Monthly rate: minimum of \$35 per month with board furnished; Piece rates: \$2 per cord for four foot pulpwood and \$3.50 for a double cord, eight foot pulpwood. Charge for board for men on piece rates: 75 cents per day. Companies to charge prevalent retail prices for merchandise, tools, etc., at camps.

### Manufacturing: Iron, Steel and Products (Motor Fire Apparatus)

TORONTO, ONTARIO.—LAFRANCE FIRE ENGINE AND FOAMITE LIMITED AND THE INTERNATIONAL ASSOCIATION OF MACHINISTS, LOCAL No. 235.

Agreement to be in effect from January 25, 1930, to January 25, 1931, and thereafter from year to year subject to notice.

No discrimination to be shown employees on account of union activity. A joint committee to be formed to consider questions of efficiency and co-operation.

Hours: 8½ per day, 5 on Saturdays, a 47½ hour week.

Overtime: time and one half; work on Sundays and holidays, double time.

Wages per hour: machinists 80 cents, assemblers 65 to 75 cents, helpers 54 and 59 cents; these rates to remain in effect until changed by conference and agreement with committee of machinists.

One apprentice allowed to every five machinists, and must be between the ages of 18 and 21 years.

All employees to be provided with steady work as far as is practicable; seniority to be considered in laying off and taking on help.

Any dispute which cannot be settled between the two parties will be referred to the Minister of Labour of the Dominion Government for arbitration.

### Transportation and Public Utilities: Water Transportation

SAINT JOHN, N.B.—VARIOUS STEAMSHIP COMPANIES AND THE INTERNATIONAL LONGSHOREMEN'S ASSOCIATION, LOCAL No. 273.

Agreement reached through mediation of an official of the Department of Labour, following an application under the Industrial Disputes Investigation Act.

Agreement to be in effect from November 25, 1933, to October 31, 1934, and thereafter from year to year, subject to notice.

This agreement is similar to the one previously in effect, which was summarized in the LABOUR GAZETTE, March, 1933, page 332, December 1931, page 1358, and December 1930, page 1456, with certain changes in working conditions, including the following:

At least five men in the hold of steamer when discharging any class of cargo. Two men to each truck when trucking cargo between sheds or from berth to berth at the Long Wharf. When steamer is finishing in the afternoon, each gang to be employed until its hatch is completed if balance of cargo is available at 1 p.m. The wage rates to apply to all schooners for which the Companies control the stevedoring, as well as to all steamships.

Wage rates and hours are unchanged: 63 cents per hour for handling general cargo and 72 cents for handling bulk cargoes with a 9 hour day or night.

SAINT JOHN, N.B.—VARIOUS STEAMSHIP COMPANIES AND THE INTERNATIONAL LONGSHOREMEN'S ASSOCIATION, LOCAL No. 1039 (STEAMSHIP HORSE AND CATTLE FITTERS, SEALERS, LINERS AND CLEANERS).

Agreement to be in effect from November 1, 1933, to October 31, 1934, and thereafter from year to year, subject to notice.

The agreement is the same as the one previously in effect and summarized in the LABOUR GAZETTE, March, 1933, page 333.

Wages are 59 cents per hour for day work, 88 cents for night work with a 9 hour day or night.

SAINT JOHN, N.B.—VARIOUS STEAMSHIP COMPANIES AND THE INTERNATIONAL LONGSHOREMEN'S ASSOCIATION, LOCAL No. 810 (COAL HANDLERS AND TRIMMERS).

The agreement which came into effect December 24, 1932, and which was summarized in the LABOUR GAZETTE, March, 1933, page 332, was automatically renewed without change to October 31, 1934, and thereafter from year to year, subject to notice.

Wages and hours are: 72 cents per hour for day work and 90 cents for night work, with a 9 hour day or night.

A report on "National Recovery Measures in the United States" has been published at Geneva by the International Labour Office (Studies and Reports, Series B, Economic Conditions, No. 19). It consists mainly of a compilation of the principal legislation on which the recovery program is based, together with a number of the industrial codes adopted under the National Industrial Recovery Act. For two of the most important Acts (the National Industrial Recovery Act and the Agricultural Adjustment Act, with the Emergency Farm Mortgage Act) charts have been prepared with the object of indicating the main provisions of these measures in a

convenient and summary form. The so-called "Blanket Code" (LABOUR GAZETTE, August, 1933, page 785) is considered to be of special interest as it may be taken as representing what the N.R.A. administration presumably considers as the "norm" of labour conditions. Special note is made of the fact that various recovery measures are subject to time limits. The National Industrial Recovery Act is in force for two years, and one of its most important provisions (Section 4) for one year. The President's Reemployment Agreement is effective only until 31st December, 1933. The Codes, in a number of cases, are open to revision after a period of ninety days.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, DECEMBER, 1933

### Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was slightly upward, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being higher. The advance in the former was due mainly to the higher cost of foods and in the latter to increased prices of live stock, meats, butter, raw cotton, raw wool and bituminous coal.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was \$7.37 at the beginning of December as compared with \$7.27 for November; \$7.04 for December, 1932; \$11.83 for December, 1929; \$11 for December, 1921; \$16.92 for June, 1920 (the post war peak); and \$7.96 for December, 1914. The increase in December was due mainly to a seasonal advance in the prices of eggs and butter. The prices of beef, pork and potatoes were lower than the previous month. Including the cost of fuel and rent with that of foods the total budget averaged \$15.83 at the beginning of December as compared with \$15.72 for November; \$15.41 for June, 1933 (the low point); \$16.01 for December, 1932; \$22.11 for December, 1929; \$21.40 for December, 1926; \$21.49 for December, 1921; \$26.92 for July, 1920 (the post war peak); and \$14.26 for December, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics was again slightly higher, the index for December being 69.0 as compared with 68.7 for November and 63.7 for February (the low point). Comparative figures for earlier dates are 64.0 for December, 1932; 96.0 for December, 1929; 97.9 for December, 1926; 96.4 for December, 1921; 164.3 for May, 1920 (the post war peak); and 66.4 for December, 1914. One hundred and five prices quotations advanced, sixty-three declined and three hundred and thirty-four were unchanged.

In the grouping according to chief component materials six of the eight main groups were higher and two were lower. The groups which advanced were: the Animals and their Products group, because of higher prices for live stock, butter, fresh and cured meats which more than offset reductions in the prices of eggs, leather and hides; the Fibres, Textiles and Textile Products group, due mainly to higher quotations for raw cotton, raw wool, worsted cloth yarns and woollen cloth; the Wood, Wood Products and Paper group, because of higher prices for timber and wood

pulp which more than offset lower prices for cedar shingles; the Iron and its Products group, because of higher prices for scrap iron and steel; the Non-Ferrous Metals and their Products group, because of higher prices for silver, copper, lead and zinc; and the Non-Metallic Minerals and their Products, owing mainly to increased prices for imported bituminous coal and sulphur. The Vegetable and Vegetable Products group was slightly lower, because of declines in the prices of grains and coffee which more than offset higher prices for apples, flax, corn, gluten meal, bran, shorts and tea. The Chemical and Allied Products group was also slightly lower.

In the grouping according to purpose consumers' goods were somewhat higher owing chiefly to higher prices for tea and fresh meats, woollen hosiery, knit goods and woollen yarns. Producers' goods were unchanged, manufacturers' materials being slightly lower while producers' equipment advanced. In the former the decline was due mainly to lower prices for grains, while in the latter the increase was largely the result of higher prices for imported coal.

### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of December of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemploy-

ment are not paying rent or are paying only part of the amounts due.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which statistics were available when first published in the LABOUR GAZETTE in January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the

western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

### Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living, based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number for rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and costs of the various items from 1913 to 1926, weighted according to the importance of each item in workingmen's family expenditure, and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

### Retail Prices

The decline in beef prices continued, sirloin steak averaging 19 cents per pound in December as compared with 19.7 cents in November and shoulder roast averaging 10.2 cents per pound as compared with 10.5 cents in November. These prices were slightly lower than those prevailing in the same month last year. Both fresh and salt pork were slightly lower in the average, the former at 15.6 cents per pound in December as compared with 15.8 cents in November and the latter at 15.4 cents per pound as compared with 15.6 cents. Lard was up in the average from 13.2 cents per pound in November to 13.4 cents in December.

Eggs were substantially higher in practically all localities except in British Columbia where some decrease occurred. In the

\* Prior to 1926 number of commodities was 236.

(Continued from page 76)

average fresh eggs were up from 37.7 cents per dozen in November to 44.8 cents in December and cooking from 27.7 cents per dozen to 30.9 cents. The price a year ago was 45.4 cents per dozen for fresh eggs and 32.1 cents for cooking. Milk was unchanged at an average price of 9.7 cents per quart. Butter prices showed a slight seasonal advance, dairy being up from an average of 21 cents per pound in November to 22.2 cents in December and creamery from an average of 24.3 cents per pound to 25.6 cents.

The price of bread has been unchanged since September at 5.9 cents per pound. Potatoes showed little change at \$1.06 per ninety pounds as compared with \$1.10 in November and 88 cents in December, 1932. The price of tea has tended to rise since midsummer, averaging 43.9 cents per pound in December as compared with 40.7 cents in June. Anthracite coal was again higher at \$15.20 per ton as compared with \$15.07 in November. Increases were reported from Halifax, Hull, Ottawa, Belleville, and London. No changes were reported in rent.

The following are the prices reported for Welsh coal, domestic sizes: Halifax, \$16.50; Truro, \$15; Windsor, \$16.50; Charlottetown, \$14.40; Moncton, \$16; Saint John, \$14; Quebec, \$13.50; Three Rivers, \$15; Sherbrooke, \$16.25; St. Hyacinthe, \$14.75; Montreal, \$14.75; Ottawa, \$16.75; Kingston, \$15.50; Belleville, \$16.50; Peterborough, \$16.25; Oshawa, \$14.50; Toronto, \$14.75; St. Catharines, \$15.50; Hamilton, \$14.75; Galt, \$15.50; \$16; St. Thomas, \$15; Sudbury, \$17; Cobalt, \$17.75; Timmins, \$19; Port Arthur, \$16; Fort William, \$16; Winnipeg, \$19.50.

## Wholesale Prices

The following is a summary of a statement on wholesale price changes during the month issued by the Dominion Bureau of Statistics.

Grain prices for the most part were lower. No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, averaged 60.3 cents per bushel in December as compared with 63.7 cents in November. Prices fluctuated between 58½ cents per bushel early in the month and 63¼ cents toward the end. In coarse grains western barley was down from

34.4 cents per bushel to 34.2 cents, oats from 30 cents per bushel to 29.8 cents and rye from 42.2 cents per bushel to 41.1 cents. Flax was slightly higher at \$1.42 per bushel as compared with \$1.39 the previous month. Rolled oats at Toronto advanced 5 cents per ninety pound sack to \$2.80. Bran and shorts at Montreal were 69 cents per ton higher, the former at \$19.21 and the latter at \$20.21. Raw sugar at New York advanced from \$1.17 per cwt. to \$1.19, while granulated at Montreal was unchanged at \$6.37 per one hundred pounds. Raw rubber at New York was up from 9.4 cents per pound in November to 9.9 cents in December. A factor in this increase was the much greater consumption than during the same period last year. In live stock choice steers at Toronto advanced from \$4.47 per hundred pounds to \$5.09 and at Winnipeg from \$3.37 per hundred pounds to \$3.69. Bacon hogs at Montreal advanced from \$6.37 per hundred pounds to \$6.60 and at Toronto from \$6.26 per hundred pounds to \$6.48. Lambs at Montreal were up from \$6.02 per hundred pounds to \$6.74.

Creamery butter at Montreal advanced from 22.9 cents per pound to 25.2 cents and at Toronto the price was up from 23 cents per pound to 25 cents. Lowered production was said to be a factor in the increase in price and cold storage holdings at the first of December were 22 per cent lower than the previous month. Fresh eggs at Montreal declined from 49.4 cents per dozen to 40.3 cents and at Toronto from 46.4 cents per dozen to 37.1 cents, while the same grade at Vancouver was down from 38 cents per dozen to 28.5 cents. Raw cotton at New York was up from 9.9 cents per pound to 10.1 cents, while the price of raw silk was little changed at \$1.64 per pound. The price of raw wool was up 1-1½ cents per pound to 19½-20 cents. In non-ferrous metals electrolytic copper advanced from \$8.96 per hundred pounds to \$9.07, while copper wire bars were slightly lower at \$7.97 per hundred pounds. Tin at Toronto was down from 56.5 cents per pound to 55 cents. A grade of United States bituminous coal was 25 cents per ton higher at \$5.50.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes afford information as to significant changes in prices in Great Britain and certain other countries. The index numbers of the cost of living are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. Tables giving the official and certain other index numbers of cost of living, retail and wholesale prices in Great Britain and several of the principal commercial and industrial countries is included in "Prices in Canada and Other Countries, 1933" which is a Supplement to this issue of the LABOUR GAZETTE.

### Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1924=100, was 61.9 for November, an increase of 0.2 per cent for the month. Food was 0.2 per cent higher, due to increases in the meat and fish group, although other food groups were lower. Among industrial materials, iron and steel, coal, cotton and wool showed increases while "other metals and minerals," "other textiles" and miscellaneous commodities were lower than in October.

The *Statist* index number, on the base 1867-1877=100, was 79.3 at the end of November, a decrease of 1.5 per cent for the month, although still 1.8 per cent over the November

1932 level. The decrease in November included all of the six main groups.

COST OF LIVING.—The *Ministry of Labour Gazette* index number, on the base July, 1914=100, was 143 at December 1, showing no change from the previous month. There was no change in any of the five groups for the month.

### France

WHOLESALE PRICES.—The index number of the General Statistical Office, on the base 1914=100 (gold index), was 78 for October, showing no change for the last two months. Among foods, decreases in both vegetable and animal foods were nearly offset by a considerable increase in the sugar, coffee and cocoa group.

### Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100, was 96.0 for November, an increase of 0.3 per cent for the month, which was due to an increase in agricultural prices.

COST OF LIVING.—The official index number, on the base 1913-1914=100, was 120.4 for November, an increase of 0.5 per cent over the October level. Increases were noted in foods, heat and light and clothing. There was a very slight decrease in the sundries group, and rent was unchanged.

### India

**WHOLESALE PRICES.**—The index number for prices at Bombay of the Labour Office, Government of Bombay, was 98 for October, showing no change from the September level. Very little change was recorded in any of the groups.

**COST OF LIVING.**—The official cost of living index number at Bombay, on the base July, 1914=100, was 100 for October, a decrease of 2 per cent from September, due entirely to lower food prices.

### United States

**WHOLESALE PRICES.**—The Bureau of Labour Statistics index number, on the base 1926=100, was 71.1 for November, as compared with 71.2 for October. This is the first decline recorded in this monthly index number since February. Compared with October, increases were noted in farm products, foods, building materials, chemicals and drugs and sundries and decreases in hides and leather products, textile products, fuel and lighting, metals and metal products and housefurnishing goods.

**Bradstreet's index number** (continued by Dun and Bradstreet, Inc.) which is the sums total of the prices per pound of 96 articles of common consumption was \$8.8126 at December 1, a decrease of 0.4 per cent for the month, but an increase of 28 per cent over the same date in 1932, and 37.7 per cent over the low point at March 1, 1933. The declines recorded at December 1, from the previous month occurred chiefly in the foods and farm products groups.

**Dun's index number** (continued by Dun and Bradstreet, Inc.) which is based on the cost *per capita* of a year's supply of commodities, was \$159.491 at December 1, a decline of 0.6 per cent from November 1. Declines in breadstuffs, meat, dairy and garden produce, clothing and miscellaneous commodities were partly offset by advances in "other food" and metals.

**COST OF LIVING.**—The Bureau of Labour Statistics index number which is calculated semi-annually, on the base 1913=100, was 135.0 for December, an increase of 5.2 per cent over the June level and of 2.2 per cent over December, 1932.

## Changes in Industrial Structure of Great Britain

An industrial analysis of the population insured under the British Unemployment Insurance scheme is given in the November issue of the *Ministry of Labour Gazette*. This analysis, it is claimed, furnishes "a sufficiently accurate indication of the long-term trend of changes in the industrial structure." It is shown that while the insured population as a whole has increased by 15.4 per cent in the ten-year period 1923 to 1933, the numbers in building, contracting, transport and distribution have increased by over 40 per cent and those in the miscellaneous services by over 50 per cent. These groups together now include over 37 per cent of all insured workers. The numbers in manufacturing industries, however, have increased by only 5.3 per cent while the numbers in mining and quarrying have declined by 13.8 per cent.

The decline in the coal mining industry first appeared in the year 1924-25, and since July, 1924, the numbers in the industry in Great Britain have declined by over 16 per cent. Since July, 1927, there has been a net

decrease of 140,350 in the numbers of insured workpeople aged 16 to 64 in the industry. The decrease, which in 1931-32 only amounted to 1,920, as compared with 22,620 in 1930-31, rose to nearly 21,000 in 1932-33. The accelerated decline in the past year is due in part to a fall in the number of new entrants and of transfers from other industries, doubtless the result to some extent of the general improvement in employment in other industries, and in part to an increase in the numbers who have passed out of insurance.

The industries in which the numbers of insured persons have declined have been mainly coal mining, the heavy iron and steel industries, and, latterly, the textile trades, which are mainly carried on in the Northern Section of the country and in Wales; while the industries in which the greatest expansion has occurred are carried on to the greatest extent in the Southern Section. This change in the industrial distribution of the insured population has necessarily involved a corresponding geographical change from the North to the South.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Employer Liable for Neglect to Provide Protective Appliances

The plaintiff in this case was operating a tractor binder for the defendant during harvesting operations on the defendant's farm in Saskatchewan. The tractor was being used, not only to draw the binder, but to supply it with power to do its work. To transmit such power, a shaft ran aft from the power take-off on the tractor to the binder. On this shaft were three universal joints, to make it flexible. One of these joints was located at the rear end of the operating platform on the tractor. When transmitting power to the binder the shaft revolved rapidly. As the plaintiff was in the act of ascending the platform on the day in question, the shaft was revolving and his clothing caught in the universal joint so located. In consequence, he was drawn round the shaft and his left arm torn off.

The plaintiff, in an action to recover damages for personal injuries, alleged that it was extremely dangerous to operate the above machine without having a guard over the shaft, and further that there had been a guard over it, but that, prior to the accident, the defendant, though aware of such danger, had caused it to be removed. Consequently, the plaintiff claimed that his injury was caused by the negligence of the defendant in the following, among other, particulars: (a) In removing the guard from the machine, and so rendering it unsafe for operation; (b) In requiring, or permitting, the plaintiff to operate it in such an unsafe condition.

In his defence the defendant denied all allegations of negligence, and pleads that, when he engaged the plaintiff, he was to be a man competent to make the machine ready for the field, and that he undertook to make it ready, and that the defendant relied upon him to do everything to make it safe; so that, if the guard was left off it was without the knowledge of the defendant and due to the action of the plaintiff himself, who voluntarily accepted the risk of its operation without the guard. Alternatively, the defendant pleaded that the plaintiff was guilty of negligence, *inter alia*: (a) In not placing the guard on the machine; (b) In operating it 14 days without the guard; (c) In not preventing his clothing from coming in contact with the revolving shaft.

At the first trial, before a jury, a verdict was found for the plaintiff, the trial judge allowing him \$4,022.50, and costs of the action. The defendant having appealed, the Sas-

katchewan Court of Appeal dismissed the appeal with costs.

Mr. Justice Mackenzie, in his judgment in the Court of Appeal, stated the following principles as governing the case:—

An employer must take something more than a passive concern for his servant's safety so far as machinery is concerned in order to protect himself from liability on the ground of negligence for injuries sustained by the servant in the course of his employment.

With respect to the defence of *volenti non fit injuria* to an action for personal injuries brought by a servant against his employer the distinction must be observed between the case where a servant undertakes to do work which is inherently dangerous and the case where the work is rendered dangerous by the employer's neglect to provide the servant with an appliance which would protect him against a preventable danger.

Once the employer's neglect of said duty has been established in a case where the defence of *volenti non fit injuria* has been raised, then the burden falls upon him of proving to the satisfaction of the tribunal trying the case that the servant had voluntarily undertaken and contracted to accept the risk for himself. This is a question of fact, to be decided upon the circumstances in each case, and in considering this question the circumstance that the workman has entered into and continued in the master's employment with knowledge of the risk and of the absence of precautions is important, but not necessarily conclusive against him. In order to find him *volens* the tribunal must be satisfied that, with full knowledge and appreciation of the risk he incurred in working without such a protection, he freely and without any compulsion, either of an immediate order arising from fear of dismissal or serious reproof, assumed that risk as his own.

In his Lordship's view the evidence showed that the plaintiff did not voluntarily accept the risk of operating the machine without a guard; and it must be concluded that, the defendant, upon whom the burden lay, had not established his defence that the plaintiff had voluntarily undertaken the risk.

*Hill versus Baade* (Saskatchewan), 1933, *Western Weekly Reports*, vol. 3, page 592.

### Employer Liable for Negligence of "Servant" When Under Orders of Another

A doctor practising at Montreal received a telephone call asking him to pay a professional visit, the prospective patient offering

the use of his automobile to bring the doctor to his place of residence. It was arranged that the car would be at the doctor's service to enable him to fill other professional visits before reaching the patient's house. The car was driven by a chauffeur employed by the patient, and in the course of the trip, it hit one of the steel uprights in a subway. The doctor received serious injuries as the result of this accident, which was alleged to be due to the chauffeur's negligence in driving without lights after dark.

The doctor brought an action against the owner for damages for personal injuries caused by the negligence of his employee. The claim was allowed by the Superior Court, this judgment being affirmed by the Court of King's Bench, Appeal Side, and on further appeal by the Supreme Court of Canada.

Mr. Justice Rinfret pointed out that the appellant (defendant) asked that the judgment of the lower courts be reversed on two grounds: that there was no evidence of neglect on the part of the chauffeur; and that, when the accident occurred the chauffeur was the "servant" of the respondent (the doctor). In regard to the latter contention His Lordship held that the appellant, at the time of the accident "still possessed his authority and the right of giving instructions. The respondent had not acquired that right and there existed no relation of subordination between himself and the chauffeur. He certainly had not accepted the chauffeur as a casual servant or as an employee. The respondent was simply a guest in the appellant's automobile. He had no control over the chauffeur's actions. . . . There was no substitution of control or supervision, and the appellant remained responsible for the acts of his chauffeur, who in fact was carrying out his orders at the time of the accident. There was no transfer of responsibility."

As regards the appellant's first claim, that no negligence had been shown by the chauffeur, Mr. Justice Rinfret held that sufficient facts had been disclosed to justify the judgments rendered by the lower courts. "It is reasonable to presume that, without the headlights, the chauffeur could not see the obstacles confronting him in the dark subway, after 6 o'clock in the evening, in December. It cannot be gainsaid that this was, on the chauffeur's part, an omission entirely of his own and which was an imprudence having a direct relation to the accident that followed. It is only fair to mention that, in his declaration, the respondent had claimed this fact as constituting an act of negligence."

*Grimaldi versus Restaldi* (Supreme Court of Canada), 1933, *Dominion Law Reports*, vol. 4, page 647.

### Action for Recovery not Permitted Between the Fellow Servants of the Crown

A workman was employed temporarily in the work of releasing a snowbound freight train on the Prince Edward Island Railway, which forms a part of the Canadian National Railway system. While he was so engaged a passenger train ran into the freight train, with the result that he was thrown down and received serious injuries. He brought an action for damages against the Canadian National Railways for negligence in the management and operation of the railway.

In the Prince Edward Island Supreme Court Mr. Justice Saunders gave judgment against the plaintiff on the ground that the parties were fellow servants of the Crown. He held that common law duty did not apply to the Crown, and that common law right of action had been extinguished by the existence of a statutory right to compensation. In the course of his judgment His Lordship said: "The defendant says that the plaintiff was an employee of the Crown in the service of the Canadian Government Railways and at the time of the accident was within the provisions of the Government Employees Compensation Act (Revised Statutes of Canada, 1927, chap. 30, section 4); and in respect of the injury suffered by him as alleged he is entitled to compensation thereunder, subject to and in accordance with the provisions of the Workmen's Compensation Act of New Brunswick being Revised Statutes of New Brunswick, 1927, chap. 157 (now 1932, chap. 36). By the terms of section 12 of the said chapter 157 the existence of a right to such compensation effects an extinguishment of any cause of action which otherwise would have arisen out of the accident resulting in the injury complained of. The plaintiff's claim, if any, has therefore by virtue of the said provisions, been extinguished."

"No right of action existed in this Province in favour of any person who suffered on a Government owned railway previous to 1887 through negligence of its officers and employees. Prior to the Exchequer Court Act, 1887 (Revised Statutes of Canada, 1927, chap. 34), the master was not liable to the servant for injuries caused to his servant by a fellow servant. The Exchequer Court Act passed in 1887 for the first time conferred a right of action on a person on the principle of *Respondent superior*; but qualified and restricted any such action to the rules of common law."

"The case of *C.N.R. v. St. John Motor Line Ltd.*, (1930) holds the C.N.R. to be an officer or servant of the Crown. I most respectfully follow this decision, although I am free to say I am not greatly impressed with the reasons advanced in arriving at this conclusion."

"Is the plaintiff in this case the servant of the Crown? Was the relationship between the plaintiff and the defendant that of fellow employees at the time of the alleged accident? It seems to me to be established that all persons engaged in a common work or undertaking which is distributed over various local activities but co-ordinated for a common end are regarded as fellow employees..."

"It appears to me therefore that the defendant and the plaintiff in this case were fellow employees of the Crown, and the Exchequer Court Act in its application being restricted by the Rules of common law, the defendant is not and could not be held responsible for the injuries caused to the plaintiff."

*Shea versus Canadian National Railways* (Prince Edward Island 1933, *Dominion Law Reports*, vol. 4, page 605.

#### **Liability for Accident due to Negligence of Fellow Employee**

An appeal was taken by the defendant in the case of *Morel versus Faith* from the judgment of Mr. Justice Armour (noted in the *LABOUR GAZETTE*, August, 1933, page 868). That judgment awarded the plaintiff the sum of \$1,250 against the defendant. The plaintiff, who was employed by the defendant in the defendant's butcher shop, was cut by a butcher knife which flew into the air when a quarter of beef was dropped upon a block where the knife was lying. Mr. Justice Armour held, on the facts, that one Lambkin, another servant of the defendant, had been negligent in the performance of his duties and that the negligence of Lambkin contributed to the accident; he also found that the plaintiff was negligent in an equal degree and for the reasons set out in the previous report on this case, he awarded the plaintiff one-half of the amount of the damages which he had suffered against the defendant.

The appeal was heard in the Court of Appeal by Chief Justice Mulock and Justices Middleton, Masten, Davis and Macdonnell.

Chief Justice Mulock concluded, on the evidence, that the plaintiff alone was negligent and was the sole author of his own injury and that therefore the appeal should be allowed and the action dismissed, both with costs.

Justices Middleton, Davis and Macdonnell agreed with the Chief Justice that the appeal should be allowed.

Mr. Justice Masten dissented, holding that both Lambkin and the plaintiff were negligent as found by the trial judge and that the appeal should be dismissed. The learned

Justice of Appeal did not think that where the trial judge had passed upon two conflicting stories of what had happened the Court of Appeal should interfere.

The appeal was allowed with costs.

*Morel versus Faith* (Ontario), 1933, *Ontario Weekly Notes*, page 739.

#### **Employer held liable for Servant's selling Goods under Weight**

An employee in a "serve yourself" store sold to a customer a certain quantity of sugar which was short in weight by one pound of the marked weight. Action was laid against the firm on a charge of selling by short weight contrary to the Weights and Measures Act, section 63. In the magistrate's court, the action was dismissed on the ground that the clerk, in the course of filling a large number of bags marked 10 pounds, had accidentally or mistakenly given one short weight without guilty intent.

On appeal to the Manitoba Court of Appeal, this decision was reversed, the court finding that an employer is liable to conviction for the unauthorized and inadvertent act of a servant in selling to a customer goods short of the quantity purchased contrary to the Weights and Measures Act, s. 63, for *mens rea*, or guilty intent, is not an essential ingredient of the offence thereby created and he is responsible if the servant was acting within the course of his employment in performing the act in question.

In giving judgment, Chief Justice Prendergast stated that "the facts seem to be in this case that the weighing clerk in the course of his ordinary duty, having to fill on that day a great number of bags all stencilled in advance for 10 pounds, mistakenly put and weighed in one of them a quantity of sugar that was short by about 1 pound. The learned magistrate so found and stated a case containing the two questions:

'First. Is knowledge, guilty knowledge, an essential element of the offence created by s. 63 of the Weights and Measures Act?

'Secondly. Is an employer liable under that section for the acts or omissions of his servants?'"

His Lordship pointed out that the statute is for the protection of the public and that "with respect to such enactments, as well as those relating to the revenue, the sale of intoxicating liquors and most, if not all of those containing prohibitions not falling within the proper domain of criminal law, the general rule is contrary to the common law, that *mens rea* is not a necessary ingredient of the offence."

In regard to the second question, after citing certain precedents, the Chief Justice proceeded as follows:

"Errors will happen in stores of all kinds, sometimes by absent-mindedness at the close of a hard day's work, or may be especially with scales of the old type, by inadvertently using one weight for another. But it appears that to protect such cases would leave the door too wide open to design, and so, unless there be some distinct differentiating principle, the liability has been made to cover the whole ground. The law so understood does not involve any indignity for those who have accidentally or mistakenly infringed it. Its justification is simply that the public could not be protected otherwise.

"I would answer the first question 'No' and the second question 'Yes'.

"I would set aside the order of dismissal and remit the matter to the learned Magistrate for conviction and to be further dealt with."

Justice Trueman, in a dissenting judgment, considered that "there is nothing in the terms of the section, or in any object it can be said it was passed to advance, to suggest that the section excludes the defence of mistake or unintentional wrong-doing. Full effect is given to the section if the onus is held to be put by it on the defendant, as I venture to think it does, of establishing absence of guilty intent or knowledge, and the prosecution is not required in the first instance to prove *mens rea*. . . . .

"I would answer the first question in the affirmative. It is not required that the second question be answered."

*Rex vs. Piggly Wiggly Canadian Ltd*, June 30, 1933, Dominion Law Reports, Vol. 4, page 491.

#### Definition of "Workman" involves Relationship of Servant and Master

The owners of a telephone system in Saskatchewan employed a man to take charge of their switch board, keep their lines in repair, and attend to "trouble" work, the employee supplying his own tools and transportation, and paying any help he might require. The employee received a salary at an annual rate, but payable in monthly instalments, and was allowed to reside in the house where the switch board was installed.

He was permitted to engage in other work besides his work for the company. The contract of employment was terminable on 30 days' notice by either side. On or about July 8, 1932, the employee climbed up a telephone pole in order to attend to some trouble which had developed. While he was engaged in this work the pole broke and he was thrown to the ground and injured. He claimed compensation from the defendants under The Workmen's Compensation Act, R.S.C., 1930, ch. 252.\*

The first point of controversy between the parties to the action arose out of the question whether the plaintiff was a "workman" within the meaning of the Act and was entitled to compensation. The District Court Judge found that the plaintiff was a workman and the defendants appealed from that finding.

Section 19 of the Act provides that an appeal may be taken from the decision of a Judge in an action for compensation upon "any question of law or mixed question of law or fact."

In the hearing of the appeal by the Saskatchewan Court of Appeal Mr. Justice Turgeon held that the question whether a person performing labour is a "workman" within the meaning of the Act is a mixed question of law and fact, and the whole of such question, that part of it which is made up of fact as well as that part which consists of a proposition of law, is appealable.

His Lordship reviewed the authorities on the question as to when the relationship of master and servant exists. He stated that a person is not a "workman" within the definition given in the Act unless there is the relationship of servant and master between him and the person by whom he is employed. That relationship was held, under the circumstances of the present case, not to exist between the plaintiff and defendant, although the plaintiff was compensated for his services by *Inter alia* an annual salary payable monthly.

*Cassidy versus Blaine Lake Rural Telephone Co. Ltd.* (Saskatchewan) 1933 *Western Weekly Reports*, vol. 3, page 641.

\* This Act is to be distinguished from the Workmen's Compensation Act (Accident Fund), chapter 253. It applies to industries in which the employers are individually liable for the payment of compensation.

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

**I**NDUSTRIAL employment showed its customary seasonal contraction at the beginning of January, 1934, but the losses were decidedly smaller than at the same date in earlier years of the record. The firms furnishing data laid off some 59,900 workers, on the average, between December 1 and January 1 in the years 1921-33, while the decrease on the date under review amounted to 30,387, or slightly more than half of the average for the last twelve years. Returns were tabulated by the Dominion Bureau of Statistics from 8,460 employers, whose payrolls aggregated 821,131, as compared with 851,518 in the preceding month. The index (average 1926=100) stood at 88.6, compared with 91.8 on December 1 and 78.5 on January 1, 1933. The index for the beginning of January in the twelve preceding years was as follows:—1932, 91.6; 1931, 101.7; 1930, 111.2; 1929, 109.1; 1928, 100.7; 1927, 95.9; 1926, 90.7; 1925, 84.9; 1924, 89.8; 1923, 87.3; 1922, 78.8 and 1921, 88.8. The figures are indicative of conditions in all industries except agriculture, fishing, hunting and highly specialized business.

At the beginning of January, 1934, returns were furnished to the Department of Labour by 1,726 local trade unions, with a membership numbering 146,770 persons. Of these, 30,799, or 21.0 per cent, were without employment, contrasted with a percentage of 20.4 at the beginning of December, 1933, and with 25.5 per cent at the beginning of January, 1933.

Reports received from the offices of the Employment Service of Canada indicated a decrease from November in the volume of business transacted during December, 1933, as shown by the average daily placements effected, but when a comparison was made with December a year ago a substantial gain was recorded. This expansion was largely due to increased placements in construction and maintenance, in which group relief work had been provided by the Federal and provincial governments. Logging also showed improvement, but services recorded a fairly large decline. Vacancies in December, 1933 num-

bered 39,683; applications, 62,193; and placements in regular and casual employment, 37,807.

In retail prices the cost per week of a family budget of staple foods, fuel and lighting, and rent was higher in January, 1934, at \$15.95 as compared with \$15.83 the previous month. The increase was due to the higher cost of foods, chiefly meats and butter which more than offset a seasonal fall in the cost of eggs. Some comparative figures for earlier dates are \$15.41 for June, 1933 (the low point); \$15.89 for January, 1933; \$22.17 for January, 1930; \$21.52 for January, 1922; \$26.92 for July, 1920 (the post war peak); and \$14.49 for January, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics was again higher at 70.6 for January, 1934, as compared with 69.0 the previous month and 63.6 in February, 1933 (the low point). The advance was due in large part to higher prices for certain farm products. Comparative figures for earlier dates are 63.9 for January, 1933; 95.3 for January, 1930; 97.1 for January, 1922; 164.3 for May, 1920 (the post war peak); and 64.9 for January, 1914.

The time loss due to strikes and lockouts during January was somewhat less than during the previous month but in both cases the figures were comparatively large owing to several disputes involving large numbers of workers. In January the most important of these involved women's clothing factory workers in Toronto whereas in December the most important disputes involved loggers and pulpwood cutters in the northern parts of Ontario and Quebec. On the other hand, the number of disputes in January and the number of workers involved considerably exceeded the figures for December but most of these disputes involved relatively small numbers of workers for short periods only. In fifteen of the twenty-two disputes in progress during January, increases in wages were among the objects and of these ten terminated during the month, six in favour of workers, three in favour of employers, and one in a compromise. In January last year the numbers of disputes and of workers involved were very small so

that the figures for January, 1934, in comparison show very great increases. There were in existence during the month twenty-two disputes, involving 6,030 workers, and resulting in a time loss of 47,944 working days, as compared with sixteen disputes, involving 3,902 workers and resulting in a time loss of 55,477 working days in December. In January, 1933, there were on record eight disputes, involving 598 workers and resulting in a time loss of 6,250 working days. At the end of the month there were on record eight disputes involving upward of 900 workers. These figures do not include those strikes and lock-outs in which employment conditions were no longer affected, but which had not been called off by the union.

The latest available statistics reflecting industrial conditions are given in the table on page 93. The index of the physical volume of business, based upon forty-five factors, was slightly higher in December, 1933, following the moderate decline of the two preceding months from the high point of the year reached in September. The level of this index in December, 1933, was 19 per cent above that of December, 1932. Of the chief components of the index mineral production and manufacturing were higher in December as compared with November, while construction, electric power output and distribution were lower. As compared with a year ago, however, all these factors were higher, the increase being most pronounced in manufacturing and electric power output. The figures available for January, 1934, show a continuation of the advance in wholesale prices, while employment was seasonally lower. Car loadings showed substantial improvement over the preceding month and over January of last year. Contracts awarded were lower than in December but higher than in January, 1933.

**W. M. Dickson  
succeeds  
H. H. Ward as  
Deputy  
Minister  
of Labour**

Early in January the retirement was announced of Mr. H. H. Ward as Deputy Minister of Labour, on account of ill-health, after serving in that capacity since 1923.

Mr. William M. Dickson, B.A., was appointed to this position in succession to Mr. Ward, effective from January 1. Mr. Dickson had served since 1930 as private secretary to the Hon. Senator G. D. Robertson during his term of office as Minister of Labour, and to the Hon. W. A. Gordon, the present Minister of Labour. Mr. Dickson entered the public service on February 1, 1914, as Private Secretary to the Right Hon. Arthur Meighen, then Soli-

citor General. He served in a like capacity with Hon. Hugh Guthrie and later with Hon. D. D. MacKenzie and Hon. E. J. McMurray during their tenure of office as Solicitor General; also with Right Hon. R. B. Bennett and Hon. E. L. Patenaude, while they held the office of Minister of Justice. Following Hon. E. J. McMurray's resignation Mr. Dickson, from 1925 to 1930, was attached to the Clemency Branch of the Department of Justice as Assistant to the Chief of the Remission Branch.

**Investigation  
of marketing,  
chain stores,  
etc., in Canada**

The House of Commons, on February 2, agreed to the following motion, proposed by the Prime Minister, the Right Hon. R. B. Bennett:

"That a select special committee of eleven members of the House be appointed to inquire into and investigate the causes of the large spread between the prices received for commodities by the producer thereof, and the price paid by the consumers therefor; the system of distribution in Canada of farm and other natural products, as well as manufactured products, and, without restricting the generality of the foregoing, more particularly to inquire into and investigate,—

"(a) The effect of mass buying by department and chain store organizations upon the regular retail trade of the country, as well as upon the business of manufacturers and producers;

"(b) The labour conditions prevailing in industries supplying the requirements of such department and chain store organizations, and the extent, if any, to which existing conditions have been brought about by the purchasing practices of such organizations, and the effect thereof upon the standard of living amongst those employed in such industries and organizations;

"(c) The relation between the flour milling industry and the bakeries of the country, and the effect of such relations upon the baking industry of Canada;

"(d) The methods and system prevailing in the marketing of live stock and animal products for domestic consumption and export, and the extent to which the present system affords or restricts opportunity for fair returns to producers.

"That the committee shall have power to send for persons, papers, and records, and the further power to request the appointment of a commission or commissioners under the Inquiries Act, to secure evidence to be presented to the committee by such commission or commissioners.

"That the committee shall report to the House from time to time its findings, together

## MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

† Revised.

(7) MacLean's Building Review.

with recommendations of such measures as in the opinion of the committee may be considered necessary to secure as far as possible, fair and just practices in the distribution and marketing systems of Canada, with fair and just returns to producers, employees, and employers, not inconsistent with the rights of consumers."

**House of  
Commons  
resolution on  
shorter hours,  
etc.**

The following motion, proposed by Mr. A. A. Heaps (Winnipeg North), on February 5, was accepted by the government and agreed to by the House of Commons:

"Whereas, there still exists in Canada an acute unemployment problem, and

"Whereas, it is desirable that as many as possible of these unemployed should be absorbed into the industrial life of the nation;

"Therefore be it resolved, that, in the opinion of this House, the government should take into immediate consideration the necessity of reducing the hours of labour of those engaged in industry, and also increase the purchasing power of the masses of our people in order that they may absorb the goods produced, thereby creating a more equitable distribution of our wealth production."

Mr. Heaps, in introducing the motion, laid stress on the necessity for increasing the purchasing power of the Canadian people as a means of increasing the consumption of goods produced, suggesting that shorter hours would tend to readjust the economic situation and to bring about a solution of the problem of unemployment. Speeches on the motion were made by Mr. Angus MacInnis (Vancouver South), Mr. Humphrey Mitchell (East Hamilton), Mr. Wilfred Hanbury (Vancouver-Burrard), Mr. Fernand Fafard (L'Islet), Mr. J. H. Stitt (Selkirk), Mr. J. A. Barrette (Berthier-Maskinonge), the Hon. Peter Heenan (Kenora-Rainy River).

The Hon. Hugh Guthrie, Minister of Justice, in accepting the motion on behalf of the government, referred to the investigation to be undertaken by a committee of the House, as described in the preceding note. "By the terms of that reference," he said, "the committee is empowered to inquire particularly in regard to the 'labour conditions prevailing in industries supplying the requirements of such department and chain store organizations and the extent, if any, to which existing conditions have been brought about by the purchasing practices of such organizations, and the effect thereof upon the standard of living amongst those employed in such industries and organizations.' I fancy that under that this clause of the reference there will be a very full opportunity afforded the committee to cover all the ground which would be covered by an investigation under the motion now before

the House. Meantime I can assure the hon. member for North Winnipeg that the government will give serious and immediate consideration to his proposal as set out in the present motion. At the same time I can assure him again that for many months the government have been giving consideration to this problem, and if we have not found a complete solution to it it is not because we have not endeavoured to do so. The government will accept this motion."

**Postponement  
of 18th  
International  
Labour  
Conference**

The 18th International Labour Conference will open at Geneva on June 4 instead of May 11 as previously announced. The Agenda of the Conference, as already stated in the

LABOUR GAZETTE (November, 1933, page 1058) comprises the following items: (1) Reduction of hours of work—second discussion; (2) Unemployment insurance and various forms of relief for the unemployed—second discussion; (3) Methods of providing rest and alternation of shifts in automatic sheet-glass works—second discussion; (4) Employment of women on underground work in mines of all kinds—first discussion; (5) Partial revision of the Convention concerning workmen's compensation for occupational diseases—first or second discussion; (6) Revision of the 1919 Convention concerning the employment of women during the night.

**Load Line  
Convention  
between  
Canada and  
United States**

A Load Line Convention between Canada and the United States was signed at Washington on December 9, 1933, declaring certain waters on the Pacific Coast of North America to be "sheltered waters" of the nature contemplated in Article 2, Section 2 of the International Load Line Convention, 1930 and exempting from its provisions vessels of the United States and Canada, when engaged on international voyages originating on, wholly confined to, and terminating on these waters. (The provisions of the Safety of Life at Sea and Load Line Conventions Act, passed by the Dominion Parliament in 1931, were outlined in the LABOUR GAZETTE, September, 1931, page 981; and an order in Council making certain exemptions from the provision of the Convention for the Safety of Life at Sea which requires that ships are to be fitted with radio telegraph installation, were noted in the LABOUR GAZETTE, November, 1933, page 1080.) The waters which are now declared to be "sheltered waters" include Puget Sound, the waters lying between Vancouver Island

and the Mainland and east of a line from a point one nautical mile west of Port Angeles, Washington, to Race Rocks on Vancouver Island, and continuing north to Alaska as described in the Convention.

**Seamen  
seriously  
affected by  
world  
depression**

In his report to the Joint Maritime Commission, which met at Paris, in December, the Director of the International Labour Office dealt with the world depression in the shipping trade. The depression in the shipping trade, he stated, had begun before the general economic depression had brought about a collapse in international trade. It originated in the extraordinary and over-rapid increase in the world merchant fleet and more particularly in its carrying capacity, which, in 1929, was estimated to be one and three-quarter times the pre-war figures. Then came the reduction in the volume of world trade, which fell by about 26-27 per cent in three years, increasing the disproportion between available tonnage and cargoes for transport. The tremendous falling off in the volume of trade and in freight rates had endangered the existence of many shipping firms, Mr. Butler continued. There was no need to add that the fact of ships being so often run at a loss is at the root of the stagnation in the shipbuilding industry and in other branches of industry and trade closely dependent on the mercantile marine. In view of these difficulties various measures have been suggested or tried by the shipping industry. Efforts have been made to reduce working expenses, to bring about amalgamations or arrive at agreements, to reduce excess tonnage, to lay up ships and to scrap a portion of the existing fleet of merchant vessels. These proposals have been partially applied in the national field, but the absence of international agreement in regard to any of them has severely limited the results achieved.

In the meantime, the depression in the merchant marine in every country has produced very serious consequences for seafarers. The most serious is widespread and prolonged unemployment. (In Canada between June, 1930 and June, 1931, 32.9 per cent of seamen had lost time, and the average duration of the time lost by these persons was about 25 weeks each.)

The report of the Director emphasized that the fact that so many ships are laid up was not the only difficulty with which the maritime labour market has to contend. Among other factors which aggravate the situation are the intermittent nature of employment at sea and the technical changes and advances of recent years.

**Unemployment  
insurance bill  
before United  
States Congress.**

An Unemployment Insurance bill has been introduced in the United States Senate by Senator Robert F. Wagner (New York) and in the House of Representatives by Congressman David J. Lewis (Maryland). It proposes to levy a federal tax of 2 per cent on employers of five workers or over, agriculture being excepted. In any State in which an unemployment insurance plan already exists the contribution paid by an employer to such a plan will be deducted from the amount levied under the terms of the bill. Latitude is given the States in the kind of systems that may be set up, but they must meet certain minimum requirements. Payments to workers must be at least \$7 a week and must continue for at least 10 weeks in any year. States may establish state-wide funds, industry pools or individual company reserves, and funds may be raised by assessments against employers, or workers, or both, and the States themselves may contribute if they choose. Regardless of the system adopted, however, it must be supervised or administered by the States, private insurance companies being banned.

Secretary of Labour Frances Perkins, referring to the bill, said recently: "The States themselves can decide whether to have joint contributions from employees and employers or only those from employers, what employments are to be covered, who is eligible for benefits, and what, above an absolute minimum, the benefit rates shall be. We must realize the necessity of setting up unemployment reserves in the several States, so that in future they may take the place of the bread-line or other charities as a systematic, honourable method of tiding over a slump period for those who want work, and lack it."

**World  
employment  
situation  
continues  
to improve**

Quarterly tables showing the extent of unemployment in various countries are published from time to time in *Industrial and Labour Information*, the weekly publication of the International Labour Organization. The last available figures show that the improvement noted in the last report (*LABOUR GAZETTE*, August, 1933, page 756) was continued during the latter part of 1933. For the third consecutive quarter, it is possible to observe an improvement in the situation, and this is on the whole rather more marked than in the preceding quarter. A comparison of the present situation with that of a year ago, which eliminates seasonal movements, indicates that there has been a diminution of recorded un-

employment in Australia, Belgium, Canada, Chile, Danzig, Italy, Japan, Latvia, Netherlands, Portugal, Rumania, Saar Territory, the United Kingdom, the United States and Yugoslavia. In most cases the diminution has been considerable, but in some cases, such as the Netherlands and Yugoslavia, it is small. In a number of countries for which an index of employment is available, it confirms the improvement shown by the figures of unemployment. In the United States, for instance, the increased employment is very marked. The index of employment has also risen in Great Britain, Canada, Japan and Italy. On the other hand, unemployment has increased in Bulgaria, Czechoslovakia, Norway, New Zealand, Palestine and Poland.

If the figures are compared, not with those of a year previously, but with those of the previous three months, any changes noted may be attributed partly to seasonal causes; some increased unemployment might have been anticipated at any rate in the Northern Hemisphere. In fact, however, there has been a decrease in most countries, including some of those in which unemployment has increased as compared with the previous year. This is the case in Czechoslovakia, New Zealand, Palestine and Poland.

The report points out that the statistics are compiled on such a variety of bases in the different countries that any international comparison of the figures or percentages is hazardous, if not altogether impossible. The real value of the tables is to show the changes in unemployment and employment which have taken place during a stated period of time in each country, and the trend of the fluctuations is the only thing that can give rise to any international comparison.

### Transportation problems in Canada

In the outline of the report by the Ontario Department of Labour on wages and hours in the automotive transport industry, which appears on another page of this issue, reference is made to the Dominion-Provincial conference on transportation problems, held at Ottawa in December, the Hon. R. J. Manion, Minister of Railways and Canals presiding. At that conference the following resolutions were unanimously adopted:—

"This conference is of opinion that schedules of rates and charges of common carriers should be published, subject to such legislation as may be enacted in each province.

"The conference agrees that, within the schedules of rates as published common carriers of freight shall accept and carry what

is offered to them, without undue discrimination between customers.

"This conference endorses the principle that common carriers of persons and property shall be suitably insured.

"The conference agrees that common carrier operators shall keep accounts and shall render returns to appropriate public authority as and when required.

"The conference recommends that legislation be enacted limiting the mileage of hours of labour of operators of passenger vehicles.

"The conference agrees that, in the interests of public safety, a standard of fitness should be required of all public vehicles used in the transportation of passengers.

"This conference agrees that operators of public passenger vehicles should require a medical certificate.

"This conference is of opinion that a licence should only be granted to common carriers of passengers and freight where it can be proved to the satisfaction of the licensing authority that the service proposed to be rendered is in the public interest."

### Success of co-operative bus service at Rossland, B.C.

The organization of a co-operative bus service at Rossland, B.C. in 1932 was noted in the *LABOUR GAZETTE*, July, 1932, page 743. The smelter at Trail, seven miles distant from

Rossland, employs over 3,000 men, about 400 residing at Rossland. The co-operative service was started to provide these men with their own transportation system. The subsequent history of this enterprise is told in the *Canadian Co-operator*, December, 1933.

"It became necessary in a very short time, to increase the equipment to carry the constantly increasing number of members. With no capital, at the commencement in May, 1932, other than the \$5 membership fee, and with one passenger car purchased on instalment terms, the society grew so fast that a second car was needed the following month. One fact discovered very early was that due to the guaranteed income it was possible to set the passenger rates twenty-five per cent less than those prevailing, and still have ample revenue to pay all operating costs and completely to retire out of the net revenue the capital cost of each transportation unit in one year. The next step of the co-operative transportation society, which, it should be said, is incorporated under the Co-operative Associations Act, (B.C.), was to build its own garage and to instal a service pump. When that was done, the Society grew faster than ever. Today, eighteen months after inauguration, it

has ten cars in the service, the garage has been reconstructed, and enlarged, and a workshop equipped. The society now employs its own mechanic to service its own cars. It handles seventy-five per cent of the workmen needing transportation. The capital outlay invested was less than \$1,000, but at the end of the first ten months' of operation, according to the financial statement for that period, notwithstanding the fact that the service rates were one-quarter less than those previously prevailing, the Society had surplus assets of nearly \$6,000 created from revenue made during that time."

**Self-help  
organization  
at New  
Westminster,  
B.C.**

The same issue of the *Canadian Co-operator*, gives particulars of the "Common Good Co-operative Association," the formation of which at Burnaby last year was noted in the *LABOUR GAZETTE*, April, 1933, page 366. The society was later incorporated under the provincial Co-operative Associations Act, with headquarters in Vancouver, and application has been made for its admission to membership of the Co-operative Union of Canada. Writing to the general secretary of the Co-operative Union on August 15, 1932, the President, D. G. Macdonald, explained that the society is a combination of the usual trading and manufacturing co-operative, but based upon the pooling system of districts and locals. Returns are made to members entirely in "labour hours" and on an equal basis. Mr. Macdonald gave the following explanation of developments up to that date:

"Our activities started with the cutting of fuel in a very small way which has developed into quite an extensive operation. We have secured a donkey engine and a steam saw, which is being used on our largest operation. We have also several smaller hand operations. Gardening was next undertaken with a view to supplying vegetables for our members. We have been able to put in 25 acres this year. The ladies next entered the field with quilting bees, and now they are making socks, both by hand and machinery. We have also made a small beginning in mushroom culture; soap manufacture; we are starting off on cheese-making soon; a chicken farm is being prepared. For chicken houses we secured the right to demolish some condemned houses; the timber from this is being used. We also have land for a hog

ranch, but so far have made little progress on it. We are now corresponding with the Fruit Growers Association, with a view to securing surplus fruits.

"As a result of our productive efforts there has developed a need for distribution. We are following the plan that each local must assume the responsibility for the starting of a store. This must be done in consultation with the District Advisory Board and later receive the approval of the Directors. The general supervision is under a supervisor of distribution who is responsible to the Board. So far we have opened in a very small way four such distributing centres. We have now twenty locals and it is expected that it will be necessary to have not less than ten centres to fill requirements."

The *Co-operator* notes that "the structure of the organization contemplates operation over an extensive area. Provision for effective democratic control is made in the rules. Locals elect one representative or delegate to annual and other general meetings of the organization for each twenty-five members in good standing. They constitute the general meetings. The Board consists of at least five directors, one representing each district. The local meeting nominates its director, and the general meeting ratifies the election. The principle of one member one vote prevails, both at local meetings of members and the general meetings of the organization."

**Price fixing  
bylaw passed  
by Brantford  
City Council**

The City Council of Brantford, Ontario, passed a bylaw on January 15, providing a tariff of maximum and minimum prices which all persons are to

be required to observe as a condition of obtaining a licence to carry on business in the city as dry cleaners and pressers. The bylaw states that it had been brought to the attention of the Council that "persons engaged in this business outside of Brantford have recently been soliciting business at prices far below the cost at which work can be done, to the detriment and loss of citizens of the City of Brantford."

The Brantford Board of Health recently adopted a resolution petitioning the Dominion and Provincial Ministers of Agriculture "to make provision for the zoning of the Province of Ontario, and to establish within these zones a minimum price which shall be paid to the producers of milk used for domestic purposes."

### Consumers' councils to be formed in United States

Consumers' Councils are to be organized in the United States under the supervision of the Bureau of Economic Education, which in turn is an agency of the National Emergency Council. Professor Paul H. Douglas, of Chicago, is to be the head of the Bureau. Each Council will consist of from five to seven or more members, who will serve without pay and will represent both urban and rural consumers. The five principal functions of the councils will be as follows: (1) To act as agencies for the consideration of consumers' complaints against undue price rises; (2) to serve as channels for the dissemination of accurate information concerning the N.R.A. and its effects on consumers; (3) to act as an agency through which consumers may become articulate on questions of national economic recovery; (4) to aid in the development of a more economical and efficient distribution of goods to consumers; (5) to co-operate with the Federal Emergency Relief Administration and the Civil Works Administration to speed re-employment by the development of sound civic works projects.

Each Consumers' Council will be composed as follows:—(1) A county agent in a rural county, or some one designated by him; (2) a member of a women's club or organization, who is actively interested in the needs of the consumer; (3) a woman trained, if possible, in home economics, or the economics of consumption. Where available, agents of the Federal Bureau of Home Economics will be chosen; (4) a representative of labour, preferably an active manual worker, rather than a labour organization official; (5) a woman consumer, either rural or otherwise, who is a practising housewife in a family of moderate means or less; (6) a "dirt" farmer; (7) a person active in some existing association of consumers, such as a consumer co-operative, or a consumer credit union.

### Australian Arbitration Court deals with problem of shorter hours

The Full Arbitration Court of Australia recently dismissed an application regarding the working hours of railwaymen. (Notes on the Conciliation and Arbitration Act appeared in the LABOUR GAZETTE, March, 1929, page 265; June, 1929, page 582, etc.). In addition to the main issue, which involved the question of federal and state jurisdiction, the railwaymen's representatives also advanced

a plea for a reduction of hours of work in general. The Court pointed out the great difficulty and danger of action in the direction of shorter hours of work by one country alone, and also the enormous obstacles to international co-operation. Hitherto the shortening of working hours had been urged in the Court and treated as a means of lessening the hardship of wage earners and not for economic reasons. The judges thought that it would in future be possible and desirable to reduce working hours for this humane purpose, and that Australia should further this amelioration so far as it could be done with reasonable economic safety. But the limits of that safety were narrowly fixed by (1) Australia's dependence upon exports of primary products, and (2) the aim to preserve a reasonably high standard of living. They felt it was their duty, in any case which came before them in which shortening of hours was an issue, to weigh against the proposed lessening of the wage earners' toil any probable consequential economic detriment that might be caused, not only to them but also to the whole community.

The government of Western Australia recently decided to introduce the 44-hour week in Government employment at the end of October, 1933, wages remaining the same as they had been for the 48-hour week.

The New South Wales Industrial Arbitration (Eight Hours) Further Amendment Act of 1930, according to which short time is allowed in the case of Government employees only for the purpose of facilitating the retention in employment of all the employees of the Government, or a larger number of them than could or would otherwise have been retained in employment, has been extended by Proclamation for a further period of a year as from June 16, 1933.

### Settlement of unemployed on farms in New Zealand

Under the Small Farms (Relief of Unemployment) Act, passed by the New Zealand Parliament at the session of 1932-33, a Board was established to place approved applicants on small holdings. At the session which commenced last September it was reported that steady progress had been maintained under the Act in placing new settlers on Crown lands and in making new areas available for settlement, although the Board had found some difficulty in acquiring sufficient land suitable for immediate settlement. The method adopted by the Board for its development work consists in the establishment of camps for the men whom it has previously recruited through the nearest

employment bureau. When the land has been made suitable for settlement, the future holders are selected from those who have proved their ability during the development operations. An important branch of the Board's work consists in cleaning up properties where the holdings are too large and have deteriorated, and in arranging with the settlers concerned for the surrender of portions of their holdings in return for the development work carried out.

Difficulty was experienced in acquiring by voluntary agreement sufficient land suitable for settlement, and if it is found that the present system of voluntary acquisition has failed to secure an adequate area, the question of invoking the compulsory clauses of the Act is to be given serious consideration.

#### Comparison of life tables for Canada and United States

A life table for Canada prepared by the Metropolitan Life Insurance Company shows the following facts when compared with the corresponding table for the

United States (*Statistical Bulletin*, November, 1933):—

"The Canadian lives longer, on an average, than the white resident of the United States, if we omit the Province of Quebec from the reckoning. His expectation of life at birth is 60·74 years, as compared with 59·31 for the white male in the United States. For females the figures are 63·23 and 62·83 respectively. Even if we include the Province of Quebec, which is somewhat less favourably situated as to mortality than the rest of Canada, it is still true from age one on, for males, and from age two on, for females, that the Canadian has a better expectation of life than the individual in our white population. The Province of Quebec has a less favourable record than the rest of Canada. Yet even so, among males in Quebec, the expectation of life exceeds that of white males in the United States over almost the whole range of life, namely, from age two to age eighty-two. Among females, the advantage of Quebec is restricted to ages forty-two to seventy-nine.

"A very striking feature brought out by the recently computed life table is that in Quebec, contrary to the usual situation in most civilized countries, males have a better expectation of life than females from ages one to twenty-eight.

"Infant mortality in the United States is distinctly more favourable than in Canada. The probability of dying within the first year of life is only two-thirds as great among white infants in the United States as in Canada as a whole, and less than one-half as high as in Quebec."

Reference was made in a note on page 46 of the last issue to a ballot held by the employees of the Colorado Fuel and Iron Company on the question of the continuance of the "Rockefeller employee representation plan," which had been in existence for the past eighteen years. This ballot, which was taken by the employees in the coal mining department of the Company resulted in the decision to handle wages and hours through the United Mine Workers of America rather than through the representation plan, the vote being 877 for the Union and 273 for the plan. It should be noted that this vote does not abolish the representation plan for other purposes, and that it does not affect the plan in the steel mills of the company.

The Minimum Wage Board of Saskatchewan held public meetings commencing on January 29 at Regina, Moose Jaw and Saskatoon, for the purpose of hearing the suggestions of employers and workers in regard to the working of the Act. The members of the Board are as follows:—Mr. A. J. Wickens, K.C., Moose Jaw, chairman; Mrs. Ethel M. Henderson, Moose Jaw, and W. Ralph Haseltine, Regina, representing employees; Miss Bertha M. Walker, Regina and Mr. Stanley Edwards, Saskatoon, representing employers of labour.

#### Legislative Program in Ontario

The Speech from the Throne at the opening of the Ontario Legislature on January 31 contained the following paragraphs: "It has been arranged to continue for the present year the payments by the Dominion and the Province for the relief of unemployment. Those funds will be employed largely in providing work in order that the distribution of direct relief may be gradually curtailed.

"Living conditions of men engaged in lumbering operations and boarding in camps in the North Country are such as to call for official investigation and supervision from time to time. It is hoped that proper guidance will serve to prevent the recurrence of disputes and strikes, and avoid the loss and inconvenience entailed upon all concerned.

"The measures to be submitted during the Session are bills to extend the Mortgagors and Purchasers Relief Act for another year; respecting lumbering operations and living conditions in camps; respecting Bus and Truck Transportation; to provide for provincial control of the distribution of milk; concerning the inspection and grading of agricultural products, and for various other purposes."

## RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

THE Department of Labour has been advised that agreements have been reached between the two Canadian commercial telegraph companies and their employees, approximately twenty-three hundred in all, which dispose of three applications for the establishment of Boards of Conciliation and Investigation, two received from the Canadian National Telegraphs relating to (1) a dispute with its telegraphers, clerks and installers, and (2) a dispute with its climbers, groundmen and cooks, employed on telegraph construction and maintenance gangs; and one application received from the Canadian Pacific Railway with reference to a dispute with its commercial telegraphers and clerks (LABOUR GAZETTE, January, 1934, page 8). The employees in each instance are members of the Commercial Telegraphers Union of America. The agreements provide for a 15 per cent wages deduction (that is 5 per cent in addition to the 10 per cent deduction already in effect) from March 16, 1934, to October 31, 1934, inclusive, with certain important modifications in the deduction for the lower paid classes. Effective November 1, 1934, 10 per cent only shall be deducted from the pay cheques unless either party after September 1, 1934, serves thirty days' notice of a desire to change such percentage. The above agreements are the result of a conference between officials of the telegraph companies and representatives of the employees, held in the offices of the Department of Labour on Friday, February 2, 1934, at which the Deputy Minister of Labour and Chief Conciliation Officer assisted.

The Department of Labour was notified during January that the recommendations of the Board of Conciliation and Investigation which dealt with a wages dispute between the Canadian Pacific Railway Company and its clerks, freight handlers and station employees, and subsidiary groups, (LABOUR GAZETTE, November, 1933, page 1066) had been accepted by both the company and employees and that an agreement had been concluded effective November 16, 1933.

An amicable settlement was also reached during January in the case of the wages dispute between the Canadian National Railways and its clerks, freight handlers, etc. As stated in the January issue of the LABOUR GAZETTE (page 8), the Board of Conciliation and Investigation which dealt with this matter recommended in its majority report that, effective for one year from December 1, 1933, a deduction of 15 per cent should be made from the basic schedule rates of pay of the employees concerned (i.e., 5 per cent deduction in addition to the 10 per cent deduction

already in operation), with the proviso that such deduction should not apply to the compensation of any employee now receiving \$85 or less per month, or operate to reduce below that amount the compensation of any employee now receiving \$85 or more per month. On December 7 the Department was advised by the railway management that it was unable to accept the exemptions contained in the board's recommendations and that, tentatively, pending negotiations with the employees, the railway would apply from December 1 a further 5 per cent deduction from each employee's pay cheque. Direct negotiations between the parties followed and on January 24 an agreement was reached providing for a 5 per cent deduction in addition to the 10 per cent deduction from basic wage rates already in effect, with exemption from this additional deduction in the case of monthly rated clerical employees who, through deduction and demotion, have suffered a loss of 25 per cent or more and whose present pay is less than \$85 per month; also exemption in the case of those staffs in the mechanical and stores departments whose bulletined working time is less than forty hours per week. The 15 per cent deduction from basic wage rates, with the exceptions above noted, is made effective from December 1, 1933, to November 30, 1934. Beginning December 1, 1934, 10 per cent shall continue to be deducted provided that either party may, after September 30, 1934, serve thirty days' notice of a desire to change such percentage.

The dispute between the British Columbia Electric Railway Company and its employees, members of the Amalgamated Association of Street and Electric Railway Employees of America, Divisions Nos. 101 (Vancouver), 134 (New Westminster) and 109 (Victoria), which had been the subject of reference to a Board of Conciliation and Investigation (the report of this Board was given in January issue of the LABOUR GAZETTE, page 9), was terminated on January 15 as a result of direct negotiations between the parties concerned. The agreement provides for the renewal of the old agreement covering wages and working conditions for a period of one year, terminable on sixty days' notice by either party which may be given sixty days prior to January 16, 1935, or any time thereafter. The new agreement continues the practice of motormen and conductors laying-off one day in six until such time as it may be necessary to engage additional men. Also a clause is added providing a wage schedule for motor bus operators on the Granville Street South, Macdonald Street and Spanish Bank Lines.

## ALBERTA LABOUR DISPUTES ACT

### Report of Board of Conciliation and Investigation in connection with the Dispute between the Projectionists and Managers of certain Theatres at Edmonton

**F**OLLOWING is the Report of the Board to inquire into a dispute between the Edmonton Motion Picture Projectionists, Local No. 360 of the International Alliance of Theatrical Stage Employees of the United States and Canada, and the managers of certain Theatres in the City of Edmonton, appointed by the Minister under authority given to him by Section 61 of the Labour Disputes Act. The members of the Board were: Dr. J. M. MacEachran, Messrs. John Blue and Robert McCreath.

The Board held ten public and three private sessions. The proceedings and evidence submitted at the various meetings was reviewed in lengthy majority and minority reports, the salient features of which reports are as follows:

#### Majority Report

Your Board found when it began to inquire into the dispute that a condition had arisen which created an entirely new aspect, namely, an agreement had been entered into between the Theatre owners and Union of All-Canadian Congress known as Local No. 11. Evidence submitted by Local Union No. 360 suggested that a lockout had been created by managers of theatres; that three members previously employed were still out of employment and that in respect of a number of members of Local No. 360 duress had been exercised by the managers to compel them to become members of Union No. 11.

Your Board, from the evidence submitted, is of opinion that the managers were not guilty of duress, but that the officials of Union No. 11 having secured a closed shop agreement with theatre owners, had used the general procedure as followed by labour organizations to require men, working in places covered by the agreement, to become members of that organization.

An endeavour was made to heal the breach which existed between the men belonging to the two organizations and the management, and in connection with this the Board suggested that a secret ballot be taken to determine which of the two organizations the majority of the men desired to belong to. The representatives of Local No. 360 agreed to this but the representatives of Local No. 11 disagreed.

It should be borne in mind that Local No. 360 had everything to gain and nothing to

lose by such a procedure, while Local No. 11 had nothing to gain and everything to lose. It was suggested that the Board should compel the taking of such a ballot. It was felt that we had not this authority and that we should not interfere with the amicable arrangements that appeared to presently exist between members of Local No. 11 and managers of the theatres.

The Board regrets that it failed in its efforts of conciliation to bring about a condition where complete harmony exists in the industry, but hopes that as a result of the conference and the exchange of ideas held at the session the way will be paved to a better understanding among the projectionists of the city, whose best interests can be served only by standing together for what is fair and reasonable. Such an understanding is the first essential to a closer and more sympathetic co-operation of the theatre managers and a recognition of mutual welfare on both sides.

(Signed) JOHN BLUE,

(Signed) J. M. MACEachran.

#### Minority Report

My summing up of the evidence brings me to the conclusion that the agreement of Local No. 360 that a lockout had been declared by the managements was definitely established. It is true that contracts between Local No. 360 and theatre owners did expire August 31, 1933, but custom and precedent should have been followed, when, no doubt a renewal of the agreement, probably changed would have been brought about.

Evidence definitely reveals that officials of Local No. 360, at the request of the management, did meet with certain managers during July to discuss matters relative to the agreement and it further reveals that the management has shown great interest in the welfare of Local No. 11.

Evidence further shows that at the time the agreement was made with Local No. 11 that organization did not have a sufficient number of members to man the jobs, and that with a view to bringing about a situation where sufficient men to man the jobs would be members of Union No. 11, the managers did exercise duress to compel members of Local No. 360 to join Local No. 11. This is substantiated by the letters of the management and Local No. 11, quoted as follows:

"August 14, 1933.

"Dear SIR,—Please be advised that the Empress Theatre had entered into an agreement with the National Union of the Theatrical Employees of Canada, Local No. 11, to furnish projectionists for two years commencing Sept. 1, 1933.

"Please accept this letter as two weeks notice as from August 17th, ending August 31st, 1933.

"Yours truly,

(Signed) A. Entwisle.

"August 14, 1933.

"Dear SIR,—The National Union of Theatrical Employees of All-Canadian Congress of Labour have secured contract for your theatre for a period of two years. We are fully prepared to man your theatre September 1st, 1933, and as we are not desirous of importing labour

unless forced to do so, we are offering you the first opportunity of joining this organization.

"Enclosed you will find application blank. Should you be desirous of joining this organization, please fill in same and return to the secretary-treasurer at the above address.

"Initiation fee is \$25.

"Yours truly,

"(Signed) James C. MacDonald,

"Per: National Union of Theatrical Employees Local No. 11,  
"10355 82nd. Ave., Edmonton, Alta."

I am of opinion that the Board should have exercised its authority and compelled a secret ballot of the projectionists, with a view to finding out conclusively which organization they preferred to belong to.

(Signed) ROBERT MCCREATH.

## BOARD OF ENGINEERS DECIDE CLAIMS IN CALGARY WATERWORKS CONSTRUCTION

THE contracts for the construction of a new waterworks system for the city of Calgary, completed early in 1933, contained the provision that any wage disputes arising were to be settled by a Board of Engineers consisting of the City Engineer, the waterworks engineer and the consulting engineers, the decision of this Board to be binding on all parties. After the work was completed a series of claims were made on behalf of workmen engaged on the different contracts against the contractors. The claims in general resolved themselves into three classes: (1) Overtime for skilled and unskilled labour. (2) Classification of workmen. (3) Truck owners.

Under the first type of claims, for overtime for skilled and unskilled labour, no dispute arose where union agreements existed which definitely set out the basis on which overtime work was to be paid for. The specifications called upon the contractors to pay the union or prevailing rate of wages in the district, and from the evidence it was shown that the contractors had paid the prevailing rate of wages at the time the contracts were carried out. The Board of Engineers gave it as their opinion that the claims made for overtime payment were in every case unjustified and further that the contractors substantially carried out the conditions laid down in their contracts with the city of Calgary.

Under the second type of claims, covering classification of workmen, it was found that many of the claims were made by workmen who held, say, an engineer's or machinist's papers but accepted work of a different class, mostly labouring work, where no such papers were required; they asked that they be paid in accordance with the papers which they held rather than for the class of work which they were actually doing. All claims of this type were rejected by the Board.

Under the third heading, covering claims made by truck owners: When contracts were let rates per hour were stated in the contract for different sized trucks, to be paid when hired on a rate per hour basis. Contracts were entered into with many truck owners to haul the gravel from the pits to the site of the new work on a rate per cubic yard basis, and over a period of almost three years this basis was followed. When the whole scheme was completed the truck owners demanded that they should be paid on a rate per hour basis. There was nothing in the contracts to prevent an arrangement being entered into to haul gravel on a yardage basis, and it was shown that this practice was standard throughout the district. The Board held that the very basis of all contract work on a unit basis would be defeated were such claims to be allowed and all of them were rejected.

Another type of claim made by the truck owners was that they be paid a higher rate per hour for their trucks when they were engaged by the hour for hauling excavated material. The Board held that these truck owners knew the basis of payment, and the amount they were being paid per hour, and they must further have known that the rate they were being paid was at least equal to what was being paid elsewhere, and in certain instances was at a higher rate than was being paid by the city direct. The Board again rejected all such claims.

The Board pointed out that in their judgment it was possible that some legitimate claims may have been overlooked, but the time that has elapsed and the divergence of opinion between the contractors and their foremen on the one hand, and the workmen on the other, left the Board no option than to reject all such claims.

## CANADIAN NATIONAL RAILWAYS EMPLOYEES' BOARD OF ADJUSTMENT No. 2

### Summary of Recent Decisions

REPORTS have been received of seven cases recently settled by the Canadian National Railways Employees' Board of Adjustment No. 2. Outlines of previous cases were given in the *LABOUR GAZETTE*, November, 1933, page 1071, and in previous issues. The issue of August, 1930, contained a general summary of the proceedings of the Board, covering the period from January 1, 1928 to December 31, 1929; and a similar summary of proceedings from September 1, 1925, the date of the inception of the Board, to December 31, 1927, appeared in the issue of October, 1928, page 1060. The text of the memorandum of the agreement made between the railways and the employees concerned for the establishment of the Board was given in these summaries.

The Canadian National Railways Employees' Board of Adjustment No. 2 was established for the purpose of disposing of outstanding grievances or disputes that might arise from the application, non-application or interpretation of the schedule of working conditions for "Clerks and other Classes of Employees as herein named," which are not adjusted between the officers of the railway and the representatives of the employees. The members of the Board are appointed for a term of one year, subject to re-appointment. The Board is composed of four members selected by the management and four members selected by the representatives of the employees concerned. The decisions of the Board are binding upon the parties to the agreement. Provision was made in the agreement constituting the Board for the appointment of an arbitrator in any case in which the Board might be unable to agree upon an award.

#### Case No. 121—Traffic Department

Additional station ticket clerks' positions were created at Montreal, and the employees requested the officers of the Traffic Department to bulletin these positions in accordance with Article 3, Rule (d) of the Schedule for Clerks and other Classes of Employees, for a period of five days, in the seniority group concerned. The Company refused to comply with the request, holding that the work of the new positions was of an exceptional kind and that the employees filling them did not come within the provisions of their agreement with the Brotherhood. The office in question, they contended, was not a ticket office in the sense of the schedule, but was a Canadian

Pacific office in which that company had conceded to the Canadian National certain specific and limited privileges. The Company also denied that the part-time work which was performed by the clerks in question constituted "new positions" in the sense of the schedule.

The case was heard last May but was referred back by the Board to the parties. The Board was advised later that a satisfactory settlement had been reached and acceded to a request for the withdrawal of the application.

#### Case No. 124—Operating Department (Central Region).

The position of clerk stenographer in the office of the Superintendent of Terminals, Quebec, having fallen vacant, the company appointed to the position a clerk attached to the Freight Office. The employees contended that the position had not been bulletined in accordance with Article 3 Rule (d), and further that the man appointed had been credited by the company with seniority standing in the superintendent's office seniority group, whereas he had been transferred from the freight office seniority group. The Company contended that it was the railway's privilege under Article 3 (n) to select a competent man, and that the man in question had protected his seniority by writing to the superintendent that he accepted the appointment provided he was allowed to keep his former seniority standing. The company stated moreover that the vacancy had been advertised, no applications being received.

The Board denied the claims of the employees.

#### Case No. 132—Sleeping, Dining and Parlour Car Department.

This case had been heard in August, when it was referred back to the parties concerned. The Board having learned that a settlement had been reached, acceded later to the request for its withdrawal. The question at issue arose out of a change that had been made in the schedule of a buffet car on trains between Toronto and Stratford. This car was formerly operated daily, its crew being allowed six days monthly relief at the home terminal, but from February 6, 1933, it operated six days weekly, Sundays being excluded. As a result of the change the buffet crew were allowed only

their Sundays at the home terminal for rest purposes, which meant, they claimed, that instead of their having six days in the month at the home terminal, they had only an allowance of four days. The employees contended that this arrangement was in conflict with the terms of the agreement, which called for six days of monthly relief or home terminal lay-over, pointing out that no mutual agreement had been made to reduce this scale of relief. They therefore claimed, in accordance with Article 6, Rule (d), payment for the two extra days they were on duty, and that in future they should be allowed six days of monthly relief or layover.

The Company, in refusing the claim contended that the schedule made no specific provision as to working hours or rest hour for buffet car employees on this run, and contended that the change last February enabled the crew to have every Sunday at home and that there was no justification for their claims for payment for two days' overtime in accordance with Article 6, Clause (d), which related to overtime work of a special kind, whereas the work complained of was under regular conditions.

#### **Case No. 134—Sleeping, Dining and Parlour Car Department.**

This case also was withdrawn after reference back to the parties last August. It related to the claim of two stewards and their crews for overtime pay under Article 6, Rule (d), on the ground that they had been required to "double out" on a Saturday night train from Montreal to Quebec, this being in addition to the three trains included in the run on which they had bid. They claimed that under Article 4, Rule (a), two dining car crews should be assigned to the run and that these crews should be paid overtime in accordance with Article 6, Rule (c), for "doubling" out of Montreal on Saturday nights.

The Company refused the claim, pointing out that the regular operation of the run in question did not justify the assignment of two crews, as the "doubling" each Saturday night out of Montreal was part of the regular operation of this service. "The employees assigned to this run," they stated, "have every night at home except Saturdays and are also given additional monthly relief of six days each month. This additional monthly relief was granted as this crew made a round trip daily between Montreal and Quebec, being on duty approximately 12 hours each day." In view of these facts the Company held that the employees had no claim for overtime based on the application of Article 6, Rule (d).

#### **Case No. 136—Operating Department (Central Region)**

A number of men who during navigation seasons had been regularly employed on Montreal wharf as foremen, freight checkers and truckers, were given employment in the freight sheds during the winter months of 1932-33. It was objected that these men had no seniority rights to such work, which was covered by the schedule for "Clerks and other Classes of Employees," effective August 1, 1929, and that their seniority was under a separate wage agreement negotiated with another labour organization. In consequence of their being employed in the freight sheds, regular employees who were entitled to such work in accordance with the schedule were left without employment. The latter claimed that they should be paid at their regular schedule rates for the time so lost.

The company pointed out that the wharf foremen were not under the separate agreement referred to. Only a sufficient number of wharf foremen and freight checkers for handling the tonnage were permitted to follow up the work in the sheds, and the company maintained it was essential to have men familiar with the handling, marking and checking of steamship import freight.

The Board considered that the practice of using wharf freighthouse men in Montreal freight sheds during period of closed navigation on the St. Lawrence conflicted with the terms of the schedule for "Clerks and Other Classes of Employees" with respect to seniority rights, but in view of the evidence furnished to the Board as to the practice having been countenanced for many years past, the controversy was referred back to the parties interested to endeavour to reach a just and amicable settlement and to report the outcome back to the Board. Pending a satisfactory settlement of the dispute the Board recommended that the wharf employees recently taken on at Bonaventure Freight Sheds (understood to be three in number) for the present winter season be not increased.

#### **Case No. 137—Operating Department (Central Region)**

A clerk at Coteau, Quebec, applied to the agent for two weeks' vacation with pay in accordance with Article 14, Rule (a) of the schedule for "Clerks and Other Classes of Employees." Next day, on a reduction of staff, he was laid off, and was unable to exercise his seniority to obtain another position as he was junior to the man who had displaced him. The employees pointed out that a notice of two weeks on either side was re-

quired when an employee left or was dispensed with; whereas in the present case no notice of dismissal had been given. They claimed therefore that he was entitled to two weeks' pay in lieu of notice.

The Company declined the request, contending that the notation on the form of application for employment, to the effect that "fifteen days' notice be given of intention to dispense (except for cause) with the services of anyone permanently employed and paid at a monthly salary," did not apply to monthly rated employees who were laid off on account of a reduction in staff.

The Board sustained the employees' claim to the extent that the employee be granted two weeks' holidays with pay during 1933.

#### Case No. 138—Operating Department (Central Region)

Certain scale repairmen at Toronto claimed that the wages they received when on short time were below the amount due them under the schedule for "Clerks and Other Classes of Employees," Article 16, Rule (g) of which reads as follows:—

"In view of the intermittent character of the work of scale repairmen, and in lieu of any overtime pay which they may earn, they shall be paid an amount which shall be the equivalent of 240 hours at their rate of pay per hour."

They contended that that rule was incorporated in the schedule specifically for the purpose of providing a definite and fixed monthly compensation for scale repairmen,

regardless of the hours they were required or assigned to work in any calendar month; it being recognized at that time that in certain months those men worked more than the usual month of 204 hours, while at other times they worked less than a full month.

The scale repairmen's positions at Toronto are enumerated in the schedule as follows: one man at \$185 a month and five men at \$175. In February, 1932, the latter five positions were transferred from the Traffic Department payroll to that of the Mechanical Department, their hours of work being reduced, with corresponding reductions in pay. The employees claimed that as no contrary agreement had been made between the two parties to the schedule, the men should receive the monthly compensation established under the above article.

The Railway claimed that the contention of the employees that scale repairers were entitled to the full monthly compensation regardless of the number of days they are required by the Railway to be available for duty was not justified, and requested that the claim be denied.

The Board found that two of the five men concerned were receiving payment for full time, and recommended that this be continued, the senior men to be given preference to this work, and that the parties to the dispute confer with a view to reaching an amicable agreement with respect to compensation to those assigned to shop service, and report back to the next meeting of the Board.

## STRIKES AND LOCKOUTS IN CANADA DURING JANUARY, 1934

THE following table shows the number of disputes, workers involved and time loss for January, 1934, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Jan., 1934..	22	6,030	47,944
Dec., 1933..	16	3,902	55,477
Jan., 1933...	8	598	6,250

\* Preliminary figures

employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

The number of strikes and lockouts recorded for January was substantially higher than that shown for December, 1933, and the number of workers involved showed a similar increase. The time loss incurred showed a decline from that recorded for the previous month, when disputes involving pulpwood cutters in northern Ontario and Quebec and woollen factory workers at Hespeler, Ont., caused a time loss of over 25,000 and 10,000 working days re-

The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six

spectively. As compared with January, 1933, the number of strikes and lockouts recorded was almost three times as large, the number of workers involved ten times as great, and the time loss incurred almost eight times that recorded for the same month last year.

Two disputes, involving 188 workers, were carried over from December, but one of these, involving millinery workers, commencing December 7, 1933, was not reported in time for inclusion in the January issue of the *LABOUR GAZETTE*. Twenty disputes commenced during January. Of these twenty-two disputes, fourteen terminated during the month, nine in favour of the workers involved, three in favour of the employers concerned, compromise settlements being reached in two cases. At the end of January, therefore, there were eight disputes in progress recorded as strikes or lockouts, namely: boys' clothing factory workers, Toronto, Ont.; loggers, etc., Campbell River, B.C.; coal miners, Sydney Mines, N.S.; shoe factory workers, Toronto, Ont.; knitting factory workers, Winnipeg, Man.; shirt factory workers, Toronto, Ont.; shingle weavers, Port Moody, B.C.; and furniture factory workers, Montreal, P.Q.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information had been received indicating that employment conditions are no longer affected, but which the unions concerned have not declared terminated. Information is available as to four such disputes, namely: photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; lithographers, Toronto, Ont., April 15, 1932, one employer; and composers, Winnipeg, Man., March 13, 1933, one employer.

A strike of employees of an establishment in Toronto, manufacturing soap, etc., from December 4 to December 18, 1933, was reported too late for inclusion in the tables in the January issue of the *LABOUR GAZETTE* but was noted in the text. The strikers demanded an increase in wages and union recognition. The employer reported that the strikers returned to work without changes in conditions, but the union reported that wage increases were agreed upon.

A minor dispute involving nine loggers at Duncan, B.C., for less than one day, December 28, 1933, has been recently reported. The workers demanded increases in wages, abolition of overtime work and improved camp conditions, but the employer replaced them.

A dispute during December, 1933, involving pulpwood cutters at Stave Falls, B.C., was noted in the January issue of the *LABOUR GAZETTE*. It appears that the cutters demanded a higher price per cord from the agent of the buyer who, therefore, secured wood elsewhere. A similar dispute occurred elsewhere in the same district in January.

A strike of 150 pulpwood cutters in one camp at Pullen, Ont., early in January has been reported in the press. Complete reports on the dispute have not been secured, but it appears that the employer called upon the police to deal with a number of employees who ceased work or were discharged and refused to leave the camp.

A dispute involving millinery workers and one employer in Toronto, Ont., has been reported in the press at the end of January. It appears that the establishment had been taken over by a new company which refused to operate under the conditions previously in force. The union picketed the establishment and the proprietor applied to the courts for an injunction against this but was refused. Particulars as to the dispute have not yet been received.

A dispute as to a wage increase demanded by approximately fifty employees in a furniture factory at Kitchener, Ont., was settled when a wage increase was given, the factory being closed from January 18 to January 22 to facilitate negotiations between the parties.

A minor strike, involving about one hundred ice cutters at Hudson Heights, P.Q., has been reported as occurring on January 22, when the men ceased work for one hour to secure increases in wages above the rates of \$2 to \$2.50 per day being paid. A compromise was reached.

Disputes involving men on unemployment relief work, who are not paid wages but receive subsistence for which work is performed or may be required, are not included in the record, no relation of employer and employee being involved.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

**MILLINERY WORKERS, TORONTO, ONT.**—This dispute, which began on December 7, 1933 (not reported in the January issue of the *LABOUR GAZETTE*, as information had not been received), was due to the discharge of a number of employees instead of the division of the work equally, as provided in the agreement. On January 24 work was resumed, an amendment to the agreement having been made, providing for a partial division of work until the expiration of the agreement.

## STRIKES AND LOCK-OUTS IN CANADA DURING JANUARY, 1934\*

Industry, occupation and locality	Number of workers involved	Time loss in working days	Dates, causes and results
(a) Strikes and Lockouts in progress prior to January, 1933.			
MANUFACTURING—			
<i>Textiles, Clothing, etc.—</i>			
Boys' clothing factory workers, Toronto, Ont.....	128	3,000	Commenced Nov. 3, 1933; for recognition of union and increased wages: untermi- nated.
Millinery workers, Toronto, Ont.....	60	1,000	Commenced Dec. 7, 1933; against alleged violation of union agreement <i>re</i> equal division of work; terminated Jan. 22, 1934; compromise.
(b) Strikes and Lockouts commencing during January, 1934			
LOGGING—			
Loggers and pulpwood cutters, Chapleau District, Ont.....	50	50	Commenced Jan. 3, 1934; for increase in wage rates and improved working conditions; terminated Jan. 3, 1934; in favour of employer.
Loggers and pulpwood cutters, Chapleau District, Ont.....	500	3,000	Commenced Jan. 15, 1934; for increase in wage rates and improved conditions; terminated Jan. 31, 1934; in favour of employer.
Pulpwood cutters, Sault Ste. Marie District, Ont.....	70	140	Commenced Jan. 26, 1934; for increase in wage rates; terminated Jan. 27, 1934; in favour of employer.
Loggers, etc., Campbell River, B.C.....	75	300	Commenced Jan. 27, 1934; alleged discrimination for union activity; untermi- nated.
MINING, NON-FERROUS SMELTING AND QUARRYING—			
Coal miners, Minto, N.B.....	250	2,000	Commenced Jan. 2, 1934; for reduction to 8 hours "bank to bank"; terminated Jan. 10, 1934; in favour of workers.
Coal miners, Minto, N.B.....	250	1,000	Commenced Jan. 24, 1934; for increased piece rates; terminated Jan. 27, 1934; in favour of workers.
Coal miners, Sydney Mines, N.S.	650	650	Commenced Jan. 31, 1934; for increase in piece rates for longwall miners; untermi- nated.
MANUFACTURING—			
<i>Boots and Shoes (Leather)—</i>			
Shoe factory workers, Toronto, Ont.....	52	468	Commenced Jan. 22, 1934; for union recognition, increase in wages and reinstatement of worker; untermi- nated.
<i>Textiles, Clothing, etc.—</i>			
Women's clothing factory workers (cloaks and suits), Toronto, Ont.....	2,000	26,000	Commenced Jan. 15, 1934; for agreement with 40-hour week, union wage scale and unemployment fund; terminated Jan. 29, 1934; compromise.
Cap factory workers, Hamilton, Ont.....	15	90	Commenced Jan. 15, 1934; against alleged decrease in wages; terminated Jan. 20, 1934; in favour of workers.
Women's clothing factory workers (dressmakers), Toronto, Ont.....	1,500	6,750	Commenced Jan. 17, 1934; for increase in wages, reduction in hours and recognition of union; terminated Jan. 22, 1934; in favour of workers.
Women's clothing factory workers (cloaks and suits), Montreal, P.Q.....	40	240	Commenced Jan. 19, 1934; alleged reduction in piece rates; terminated Jan. 24, 1934; in favour of workers.
Knitting factory workers, Winnipeg, Man.....	27	216	Commenced Jan. 23, 1934; against discharge of worker; untermi- nated.
Shirt factory workers, Toronto, Ont.....	10	80	Commenced Jan. 23, 1934; for increase in wages; untermi- nated.

\* In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which working time was lost to an appreciable extent.

STRIKES AND LOCK-OUTS IN CANADA DURING JANUARY, 1934\*—*Concluded*

Industry, occupation and locality	Number of workers involved	Time loss in working days	Dates, causes and results
<b>(b) Strikes and Lockouts commencing during January, 1934—<i>Con.</i></b>			
<i>Other Wood Products—</i>			
Shingle weavers, Port Moody, B.C.....	20	400	Commenced Jan. 2, 1934; against lower wages; un-terminated.
Shingle weavers, Vancouver, B.C.....	125	1,500	Commenced Jan. 2, 1934; against reduction in wages; terminated Jan. 15, 1934; in favour of workers.
Furniture factory workers, Kitchener, Ont.....	130	780	Commenced Jan. 22, 1934; for union recognition and increase in wage rates; terminated Jan. 27, 1934; in favour of workers.
Furniture factory workers, Montreal, P.Q.....	12	90	Commenced Jan. 23, 1934; for union recognition and wage increase; un-terminated.
<i>Miscellaneous—</i>			
Button factory workers, To- ronto, Ont.....	16	40	Commenced Jan. 22, 1934; for increase in wages and reduction in hours; terminated Jan. 24, 1934; in favour of workers.
<i>SERVICE—</i>			
<i>Business and Personal—</i>			
Restaurant workers, Toronto, Ont.....	50	150	Commenced Jan. 18, 1934; for increase in wages, shorter hours and recognition of union; terminated Jan. 20, 1934; in favour of workers.

**PULPWOOD CUTTERS, CHAPLEAU DISTRICT, ONT.**—A number of employees in one camp ceased work on January 3 for one day, nearly all resuming work on the same conditions as before. Later, January 15, a larger number in several camps of the same employer ceased work, demanding higher wages and improved working conditions. The camps continued to be operated by the remaining employees and by the end of the month those strikers who had not resumed work had been replaced. Early in February the approaches to the camps were reported to be still picketed.

**PULPWOOD CUTTERS, SAULT STE. MARIE DISTRICT, ONT.**—Demanding an increase in the piece rate, namely, \$2 per single cord instead of \$1.75, seventy pulpwood cutters in one camp operating 150 miles north of Sault Ste. Marie ceased work on January 26. On January 29 the strikers returned to work, their demands not being conceded.

**LOGGERS, CAMPBELL RIVER, B.C.**—A number of employees ceased work on January 27 following the laying off of a number of fallers and buckers. The employer stated that more trees than required were being cut and the union stated that men were dismissed as a result of union activity to secure recognition of the union, increases in wages and lower

rates for board, 400 men being involved. At the end of the month no settlement had been reported.

**COAL MINERS, MINTO, N.B.**—Employees in the mines of one company ceased work on January 2 and again on January 24. In the first case the demand was for eight hours in the mine "bank to bank" instead of eight hours actual working time "at the face," the dispute being as to the interpretation of a change in the provincial mining laws (*LABOUR GAZETTE*, December, 1933, page 1169). In the second case contract miners demanded higher piece rates. Through the intervention of the provincial authorities work was resumed in a few days in each case, the contentions of the employees being upheld.

**WOMEN'S CLOTHING FACTORY WORKERS (CLOAKS AND SUITS), TORONTO, ONT.**—Approximately 2,000 employees in from sixty to seventy establishments ceased work on January 15, demanding a union agreement providing for the forty-hour week, with a scale of wages higher than those being paid, and a contribution by employers of 2½ per cent of the pay roll to an unemployment fund. Agreements in a number of the establishments expired in January and these had provided for the forty-four hour week. The union alleged

that some employees were working as much as sixty hours per week and receiving low wages per hour. The employers organized as the Industrial Council of Cloak and Suit Manufacturers and on January 29 reached a settlement with the International Ladies' Garment Workers' Union providing for the closed union shop, equal division of work, the forty-four-hour week, overtime only with the consent of the union, minimum wage rates with increases for certain classes, piece rates to be settled by shop chairmen and price committees. The agreement is summarized elsewhere in this issue.

**WOMEN'S CLOTHING FACTORY WORKERS (DRESSMAKERS), TORONTO, ONT.**—Employees, members of the Industrial Union of Needle Trades Workers, ceased work on January 17 in approximately seventy establishments, demanding union recognition, a reduction in hours from fifty per week to forty-four, increases in wages, and other changes in working conditions. The five day week of forty hours was originally demanded. About forty-five of the employers signed agreements individually with the union providing for the forty-four week, establishment of minimum rates for various classes of workers, shop committees, no work to be done in contract shops, etc., and work was resumed by most of the strikers on January 22. At the end of the month the union stated that work had been resumed in all but two establishments. The agreement is summarized elsewhere in this issue.

**WOMEN'S CLOTHING FACTORY WORKERS (CLOAKS AND SUITS), MONTREAL, P.Q.**—Approximately forty workers employed in one establishment ceased work on January 19, in protest against a reduction in the piece rates provided for in the agreement with the International Ladies' Garment Workers' Union in 1933. As a result of negotiations between representatives of the union and the employer, work was resumed on January 25, the reduction being withdrawn.

**KNITTING FACTORY WORKERS, WINNIPEG, MAN.**—To secure the reinstatement of two workers discharged for cause, a number of employees in one establishment ceased work on January 23, 1934. Some of the employees had not joined in the dispute and with these and certain new workers the employer is stated to have continued operations, but no termination had been reported at the end of the month.

**CAP FACTORY WORKERS, HAMILTON, ONT.**—Employees in one plant struck for union wages on January 15, alleging that the piece rates for operators on certain lines had been

reduced. Work was resumed January 22, an agreement providing for increases having been reached.

**SHIRT FACTORY WORKERS, TORONTO, ONT.**—Eleven members of the Industrial Union of Needle Trades Workers, employed by one firm, ceased work on January 23 to enforce a demand for a fifteen per cent increase in piece rates and certain changes in working conditions. Negotiations between the parties involved failed to result in a settlement by the end of the month.

**SHINGLE WEAVERS, PORT MOODY, B.C.**—Employees in one establishment, reported by the employer as numbering 12 and by the union as numbering 20, ceased work on January 2, in protest against a reduction in wages. It appears that for work on shingles for export to the United States wages and hours of labour were in accordance with conditions in that country (seven hours per day) and that for work on shingles sold in Canada piece rates and hourly wages were lower (10 cents per hour for labourers) with eight hours per day. The shingle weavers' union, affiliated with the American Federation of Labour, demanded the same conditions for all work. The employer offered the same pay for eight hours on work for the Canadian market as paid for seven hours for the United States market. This was refused but some of the workers returned and others were partially replaced. The union had not called off the strike at the end of the month.

**SHINGLE WEAVERS, VANCOUVER, B.C.**—Employees in one establishment ceased work on January 2 against a reduction in the wage scale, resuming work on January 16, their demands being conceded.

**FURNITURE FACTORY WORKERS, KITCHENER, ONT.**—Employees ceased work about January 22 to secure increases in wages and recognition of the Furniture and Woodworkers' Industrial Union. It is reported that work was resumed after an agreement was negotiated on January 29 between union representatives and the employer providing for the forty-four hour week, four hours overtime to be worked at regular rates of pay, with time and one-quarter rates thereafter; a minimum rate of 20 cents per hour for boys (under 21 years of age), for other employees; unskilled 28 cents per hour, semi-skilled 35 cents, skilled 40 cents.

**BUTTON FACTORY WORKERS, TORONTO, ONT.**—Employees in one establishment ceased work on January 22 demanding increases in wages, namely \$8.50 to \$10 per week of forty-four hour instead of \$5.50-\$7.50 per week of fifty-two hours. It is reported that work was re-

sumed on January 24, an agreement having been reached with the Industrial Union of Needle Trades Workers, providing for these terms, the employer putting up a bond as a guarantee that the agreement would be carried out.

RESTAURANT EMPLOYEES, TORONTO, ONT.—Employees in four restaurants in the Spadina Avenue district ceased work January 18, demanding increases in wages, namely \$8 to \$15 per week with board, instead of \$3 to \$10, and

reduction in hours to nine and ten per day instead of nine to fifteen. Before the strike a number of establishments had conceded these terms and signed agreements with the union, the Restaurant and Hotel Employees' Local of the Food Workers' Industrial Union of Canada. Work was resumed on January 20 when the proprietors of the establishments involved individually signed similar agreements. The agreement is summarized elsewhere in this issue.

## RECENT STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month. The annual review containing a table summarizing the principal statistics as to strikes and lockouts in other countries is on page 131 of this issue. Information as to particular disputes is obtained for the most part from newspaper reports.

### Great Britain

Preliminary figures for the year 1933 show the number of disputes beginning in the year as 358, involving 138,500 workers with a time loss of 1,053,000 working days for the year.

Of the 358 disputes beginning in 1933, 38 were over demands for increases in wages, 59 over proposed reductions in wages, 90 over other wage questions, 4 over questions as to working hours, 90 over questions respecting the employment of particular classes or persons, 46 over other questions of working arrangements, 24 over questions of trade union principle and 7 were over other causes including sympathetic disputes.

The table given below as shown by the *Ministry of Labour Gazette* is a classification of the disputes for the year by the industries in which they occurred.

The number of disputes beginning in December was 21 and 8 were still in effect from the previous month, making a total of 29 disputes in progress during the month, involving 7,200 workers with a time loss of 46,000 working days. Of the 21 disputes beginning in December, 12 were over wages questions, 4 over the employment of particular classes or persons and 5 over other questions as to working arrangements. Settlements were reached in 18 disputes, of which 4 were in favour of workers, 8 in favour of employers, 6 ended in compromises. In addition, in the case of two other disputes, work was resumed pending negotiations.

INDUSTRIAL DISPUTES IN GREAT BRITAIN AND NORTHERN IRELAND DURING 1933

Industry Group	Number of disputes beginning in 1933	Number of work-people involved in all disputes in progress	Aggregate duration in working days of all disputes in progress
Fishing and agriculture...	112	72,300	446,000
Coal mining.....	5	500	9,000
Other mining and quarrying.....	12	800	8,000
Brick, pottery, glass, etc.....	19	8,500	28,000

Transport.....	4	400	2,000
Commerce, distribution and finance.....	11	4,600	47,000
Other.....			
Total.....	358	138,500	1,053,000

### United States

The number of disputes beginning in November was 43 and 61 were still in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 30,825 and the time loss for the month, 1,365,362 working days.

A strike of several thousand anthracite coal miners belonging to a newly formed union began January 15 to secure union recognition and other demands.

Mayor F. H. Avery of St. Catharines recently sent a questionnaire to the managers of the various industries and banks in the city, in order to learn from them the prospects of business for the coming year. He received twenty-four replies, all indicating increased activities. Several of the factories were working full time with complete staffs, and in some enlargements of plants were being planned.

## STRIKES AND LOCKOUTS IN CANADA AND OTHER COUNTRIES DURING THE YEAR 1933

THE number of strikes and lockouts in Canada in 1933, as well as the number of workers involved and the amount of time loss, showed some increase over the previous year, due chiefly to a number of strikes involving relatively large numbers of clothing factory workers and loggers. Increases in wages and the standardization of working conditions under union agreements were the chief objects in these strikes, which to a great extent were successful. Nearly two-thirds of the time loss for the year occurred in ten important disputes, each having over 10,000 man working days time loss, four of these being in logging in the northern parts of Ontario and Quebec, three in clothing factories in Montreal and Toronto, one in a textile fac-

tory in Hespeler, Ont., one in a copper mine and smelter at Anyox, B.C., and one in furniture factories at Stratford, Ont. These also involved half of the total number of workers participating in strikes and lockouts during the year.

The accompanying table of strikes and lockouts in Canada from 1901 to 1933, inclusive, gives figures as to all disputes, as to coal mining separately, and for those in industries other than coal mining. For many of the years the figures for coal mining account for very large percentages of the numbers of employees involved and of the time loss incurred. It will be observed that since 1925 the figures for coal mines have been comparatively small.

TABLE I.—STRIKES AND LOCKOUTS IN CANADA BY YEARS, 1901-1933

Year	Number of disputes beginning during the year	Disputes in existence during year										
		All Industries				Coal Mining			Industries other than Coal Mining			
		Number of disputes	Number of employers	Number of workers involved	Time loss in man-working days	Number of disputes	Number of workers involved	Time loss in man-working days	Number of disputes	Number of workers involved	Time loss in man-working days	
1901.....	97	92	285	24,089	737,808	2	1,760	7,040	97	22,329	730,768

\*In these totals figures for disputes extending over the end of a year are counted more than once.

### Compilation of Statistics

Since its establishment toward the end of 1900 the Department of Labour has maintained a record of strikes and lockouts in Canada, publishing in the LABOUR GAZETTE each month a complete list of those in progress, so far as available, with particulars as to the nature and result of each dispute. Early in each year a review of the previous year has been given, including statistical tables analysing the data, and since 1912 including a complete list of the disputes on record during the year. As the monthly statements in the LABOUR GAZETTE are necessarily of a preliminary nature the annual review constitutes the revised record for the year. A special report on "Strikes and Lockouts in Canada 1901 to 1912," issued in 1913, contained a complete list of strikes and lockouts for that period with analytical tables. The annual reviews in the LABOUR GAZETTE have brought the lists of disputes and analytical tables down to date each year.

The annual review for 1930 appearing in the LABOUR GAZETTE, February, 1931, included summary tables back to 1901, the result of a revision of the record on the basis of the classification of industries adopted by the Dominion Bureau of Statistics and other government departments for official statistics. This classification had been used for strikes and lockouts since 1921, and it was advisable to have the record for earlier years on the same basis. Other revisions to secure uniformity throughout the whole period were also made.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical tables, therefore, strikes and lockouts are recorded together, the term dispute being used with reference to either.

A strike or lockout included as such in the records of the Department, is a cessation of work involving six or more employees and lasting one working day or more. Disputes of less than one day's duration and disputes involving less than six employees have not been included in the published record unless a time loss of 10 days or more is caused. A separate record of such disputes involving less than 10 days' time loss is maintained in the Department. Although not included in the statistical record, such disputes are mentioned in the LABOUR GAZETTE at the time of their occurrence. During 1933 there were 16 such disputes, involving 228 employees, making a time loss of 84 working days.

The figures in this report are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. As to duration of strikes, numbers of employees concerned, etc., it is impossible always to secure exact information, but the estimate made in such cases is the result of painstaking methods in the collection of data, and, with increasing experience in dealing with the subject it is believed that the statistics indicate the conditions with reasonable precision. The estimate of time loss is reached by multiplying the number of working days during which each strike lasted by the number of employees directly involved in the dispute from time to time so far as known. The number of employees recorded for each dispute is the number of those directly involved, that is on strike or locked out, and does not include those indirectly affected. The figures in the tables as to workers are therefore the number of those directly involved. In recent years, when the information is available, the number indirectly affected has been shown in footnotes to Table X.

The statistical tables do not include minor disputes as described in a previous paragraph, nor disputes (previously recorded) as to which information has been received indicating that employment conditions are no longer affected, but which the unions or organizations concerned have not yet declared terminated. Information is available as to the following disputes of this nature carried over from 1932.

The following is the list of those which were carried over from 1932 but were called off or lapsed during 1933: photo engravers, Toronto, Ont., commenced March 23, 1931, one employer, lapsed by November, 1933; composers, Regina, Sask., commenced November 21, 1931, one employer, lapsed in June, 1933; motion picture projectionists, Winnipeg, Man., commenced February 27, 1932, one employer, lapsed during December, 1933; and shoe factory workers, Montreal, P.Q., commenced December 9, 1932, one employer, called off by the union on February 5, 1933. The following were still on record at the end of 1933: photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., commenced May 4, 1931, one employer; motion picture projectionists, Toronto, Ont., commenced July 11, 1932, two employers; lithographers, Toronto, Ont., commenced April, 15, 1932, one employer; and composers, Winnipeg, Man., commenced March 13, 1933, one employer.

RESULTS OF STRIKES AND LOCKOUTS ACCORDING TO NUMBERS OF EMPLOYEES INVOLVED EACH YEAR 1901-1933

NUMBER OF  
EMPLOYEES

### Charts

The accompanying chart of the time loss in working days by groups of industries for each year back to 1901, shows that in Mining considerable time loss occurred in 1909, 1910, 1911 and 1913, and again in 1917, 1922, 1924 and 1925, while in 1932, an increase over the previous six years appears. In 1919 the time loss due to general strikes is shown separately.

In Metal Manufacturing considerable time loss appeared in 1919 and 1920. In Construction considerable time loss appeared only in 1912 and 1919. In Transportation, etc., there was considerable time loss only in 1901, due to a strike of trackmen; in 1903 due to a strike of railway clerks and freight handlers throughout western Canada, and a strike of longshoremen at Montreal, with a sympathetic strike of teamsters; and in 1908, due to a strike of railway shop machinists. There also occurred considerable time loss in Clothing, etc. (including textiles, furs, boots and shoes, leather, etc.) in 1903, 1908, 1912, 1914, 1917, 1919, 1925 and 1926, with an appreciable amount in 1930, 1931, 1932 and 1933. The time loss in Other Manufacturing was large in 1901, due to a lock-out of cigarmakers at Montreal; and in 1921, 1922, 1923 and 1924, due to the prolonged disputes of job printers to secure the forty-four hour week. In 1931 and 1932 a number of disputes in sawmills caused appreciable time loss. Logging, included under Other Industries, showed considerable time loss in 1933, as in 1919, 1920, 1928 and 1929.

From the chart showing results of the disputes it appears that the majority of employees were successful or partially successful in 1901, 1902, 1907, 1915, 1916, 1917, 1918, 1926, 1930, 1931, 1932 and 1933, but were unsuccessful in 1908, 1921 and 1923. In 1919, a large percentage of the workers who were unsuccessful were involved in the general strike at Winnipeg and in general strikes in other localities in sympathy with it.

### Review of Disputes by Industries, 1933

**AGRICULTURE.**—The only strike in this industry reported in recent years occurred when on September 9 twelve hundred hop pickers in the Chilliwack district in the Fraser valley in British Columbia, ceased work demanding higher wages, piece rates, and improved working conditions, work being resumed the following day when the demands were substantially conceded.

**LOGGING.**—One-third of the total time loss for the year was due to disputes in this industry, occurring chiefly during November and

December in the northern parts of Ontario and Quebec. Workers in numerous camps from Fort Frances, Ont., to Saguenay, P.Q., ceased work demanding increases in piece rates and monthly rates of wages, reductions in rates for board and improvements in conditions. In the principal districts, around Port Arthur, Ont., and near Cochrane, Ont., monthly rates were raised to \$35 with board instead of a scale of \$26 and up with board, and the rate for board for piece workers was reduced to 75 cents per day, piece rates being adjusted upward. Agreements as to wages and working conditions were signed with representatives of the workers, providing also for recognition of camp committees to deal with grievances. In June a strike in the Thunder Bay district involving several camps resulted in a settlement as to conditions for the summer season.

**FISHING AND TRAPPING.**—A strike of salmon fishermen off Vancouver Island in May and June in sympathy with fishermen in the adjacent State of Washington, U.S.A., involved a relatively small number of men as the majority did not participate. The object of the strike was to reduce the supply of fish on the United States market during the strike there, which was substantially successful.

**MINING, NON-FERROUS SMELTING AND QUARRYING.**—The principal dispute in this industry involved copper miners and smelter workers at Anyox, B.C., attempting to secure the restoration of previous wage reductions and lower rates for house rent and board. Some of the strikers were replaced and the others returned to work after a time but the employers reduced rent and rates for board somewhat. None of the coal mining disputes affected large numbers of employers for any prolonged period except at East Coulee and Wayne, Alta., where a number ceased work late in the spring against wage reductions following a reduction made in the mines in the neighbouring Drumheller district by agreement. As the mines operate very little during the summer months these disputes remained unsettled until the autumn. Two cessations of mining due to the insolvency of the operating companies at Sydney Mines and Stellarton, N.S., in April and November respectively are not included in the record, but are shown in a footnote to the list of disputes, Table X.

**MANUFACTURING.**—The principal disputes involved clothing factory workers at Montreal and Toronto and furniture workers in Stratford and Toronto. Cloak and suit workers in Montreal and Toronto ceased work in February to secure agreements providing for union

TABLE II.—STRIKES AND LOCKOUTS, 1933, BY NUMBER OF WORKERS INVOLVED

Number of workers involved	Disputes		Workers involved		Time loss

Total.....	125	100.0	26,558	100.0	317,547	100.0

wages and working conditions with the forty hour week and an unemployment fund, the two latter not being conceded. Men's clothing factory workers in Montreal ceased work in September to secure union agreements with the various establishments, in which they were substantially successful. A strike of textile factory workers at Hespeler, Ont., in December in protest against changes in working conditions alleged to affect earnings was unsuccessful. A strike of chesterfield factory workers at Toronto in August, affecting twelve establishments, was successful, union agreements being signed providing for higher wages and the forty-four hour week. A similar strike of furniture workers at Stratford the following month was partially successful, certain wage increases being granted and the forty-four hour week but with straight time rates of wages for overtime up to fifty hours. Recognition of shop committees was also secured.

Disturbances in connection with picketing in this dispute, and in a strike of produce plant employees in progress at the same time, resulted in the stationing of military forces in the locality during the strikes on the requisition of the provincial authorities.

**CONSTRUCTION.**—The disputes in the industry involved small numbers of employers as well as of workers and for short periods in most cases, very little work being in progress.

**TRANSPORTATION AND PUBLIC UTILITIES.**—A strike of coal handlers at Montreal in June against a decrease in wages was settled in a few days. Strikes of employees in the garage of a bus company at Calgary and in a cold storage plant at Winnipeg were terminated in a short time.

**TRADE.**—A strike of poultry dressers in a produce establishment at Stratford, Ont., from September to November caused a relatively

\*The Electric Light and Power group does not include undertakings mainly public utilities; non-ferrous smelting is included with mining; erection of all large bridges is under Bridge Construction; water service is under Public Administration.

large time loss and occurred at the same time as a strike of furniture factory workers in the same locality. Three disputes in Winnipeg involving rag pickers, teamsters and truck drivers, hauling wood, were of short duration.

**SERVICE.**—A strike of restaurant employees in Vancouver, B.C., in August lasted one month. The other disputes in this group were of brief duration.

### Analysis of Statistics, 1933

Table I is a summary of the principal statistics for the period for which the record has been compiled beginning in 1901. The table shows the number of disputes beginning in each year and the number in existence during the year, the difference in each case being the number of disputes carried over the end of the previous calendar year. A small number of disputes have been carried over at the end of every year except 1903 and 1929. The approximate number of employers involved in all industries as well as the number of workers involved and the time loss, is given. In addition to these data, the number of disputes in existence during each year in coal mining and in industries other than coal mining is given, along with the number of workers involved and the time loss. A study of the latter figures reveals that a few disputes in coal mining in some years account for a large proportion of the workers involved and for a still larger proportion of the time loss resulting.

Table II gives an analysis by number of workers involved and shows that 14 of the disputes involved 64 per cent of the total number of workers participating in disputes during the year and caused 67 per cent of the time loss, and that the remaining 111 disputes did not involve large numbers of employees or long periods in most cases.

Table III gives an analysis by time loss in man working days and shows that ten disputes involving 13,600 workers, or more than one half of the total number involved during the year, resulted in over 65 per cent of the total time loss; that 72 disputes causing less than 500 working days time loss in each case resulted in but three per cent of the total time loss for the year.

Table IV gives an analysis by duration, that is the number of working days each dispute was in progress, and shows that approximately half the time loss for the year was due to 18 disputes lasting 25 days or over, these involving almost 25 per cent of the total number of workers for the year; also that 28 per cent of the workers involved were parties to disputes of less than 10 days duration.

Table V, an analysis by provinces, shows that Ontario had the largest number of disputes, workers involved and time loss, in each case not far from half of the total for the Dominion; Quebec having somewhat smaller percentages in each case, followed by British Columbia and Nova Scotia. Manitoba had a relatively large number of disputes but these involved few workers and relatively little time loss.

Table VI, an analysis by industries shows that nearly half of the time loss for the year occurred in manufacturing, chiefly in textile and clothing factories with a substantial proportion in the wood products group. Logging and mining, however, also showed considerable time loss. A strike of copper miners and smelter workers at Anyox, B.C. in February and March was the first in metal mining for some years. In construction, the numbers of disputes and of workers involved were the lowest in many years. One of the rare strikes in agriculture was recorded, namely that of hop pickers in British Columbia. Since 1901, there have been only four previously recorded, namely 2 strikes of hop pickers in British Columbia in 1905, one in 1921 and a strike of tobacco workers in Ontario in 1921.

Table VII gives an analysis by causes and results and shows that the principal causes in 78 out of the 125 disputes of the year, involving about 20,000 workers out of a total of 26,000, were in regard to wages, 20 of these being against decreases, the others being in regard to wage increases, or increases accompanied by other changes, usually to secure union recognition or agreements. In results, the number of workers who won their demands substantially or were partially successful greatly exceeded the number who were unsuccessful.

Table VIII, an analysis by industries and method of settlement, shows that out of the total of 125 disputes, 72 were settled by direct negotiations and that these involved a large percentage of the total number of workers participating in disputes. Fifteen strikes and lockouts were settled by conciliation, usually that of officials of the Dominion and Provincial Governments. The arbitration in the one instance of settlement by this method was under the Quebec Trade Disputes Act. Of the four disputes, shown under "indefinite or unterminated," two were unterminated at the end of the year, and two were terminated without definite settlement, in one case, affecting a coal mine, operations were discontinued, and in the other case, a pulpwood camp, work was carried on without the strikers who formed a small percentage of the workers.

(a) In two instances, coal mines in the hands of receivers were closed down pending negotiations as to reduced wage scales: Sydney Mines, N.S., April 5 to June 19, approximately 1,400 workers, Stellarton and Thorburn, N.S., approximately 1,300 workers, Nov. 1 to Dec. 26.

(b) Employment conditions no longer affected but in most cases union continued strike for some time.

(c) Dispute settled but mine closed temporarily.

(d) Bricklayers and masons, carpenters, painters, etc., most of the trades worked under protest. Electricians secured agreement for 85 cents per hour, a reduction from 95c.

(e) Bricklayers, masons and tilsetters worked under protest from May 1 to June 14, then agreeing to 20 cents per hour reduction.

(f) Time loss counted for days estimated or reported to be actually lost.

(g) Reported still in progress, Dec. 31.

(h) Officially terminated by union, Jan. 10, 1934.

(i) " " April 21.

(j) " " Aug. 11.

Table IX gives an analysis by months for the past eleven years, showing the number of disputes commencing during each month, as well as the number of disputes in existence, and the number of workers involved each month, both in new disputes and in all disputes in progress, with the total time loss by months. This table shows that the greatest number of disputes during a year generally occurs in May and that the greatest time loss generally occurs in July. The years 1930 and 1931 were exceptions, however, in that the greatest number of disputes commenced in September and the largest time loss occurred in February in 1930 and in October in 1931, closely followed by March, September and November. The year 1932 was an exception in that the greatest number of disputes commenced in July, the second greatest number in February, and a large number during the last three months of the year. Most of the

time loss, however, occurred during May, June, July and August, as in other years.

In 1933 the greatest number of disputes commenced in August and November closely followed by September. It was also during the last half of the year when most of the workers were involved and the greatest time loss occurred. The exception was February when three of the six disputes commencing during the month involved large numbers of workers and resulted in the second largest time loss of any month during the year. These were the disputes involving copper miners and smeltermen at Anyox, B.C. (400 workers involved) and women's clothing factory workers at Toronto, Ont., and Montreal, P.Q., involving 2,000 and 1,800 workers respectively.

Table X gives the list of strikes and lockouts occurring during the year, with certain details as to causes, results, etc.

### Strikes and Lockouts in Other Countries during 1933

The accompanying table gives the principal figures as to strikes and lockouts in other countries since 1919, as compared with Canada, showing the number of disputes (strikes and lockouts), the number of employees involved in stoppages of work and the time loss in man working days in those countries for which such figures are available.

In some of these countries, figures as to strikes and lockouts are published separately, but in the table here given they have been included together. The practice varies greatly in the various countries also in regard to other points. In some cases the numbers of strikes and lockouts shown for a year is the number beginning during the year, in other cases it is the number ending during the year, and in still other cases it is the number in existence during the year, including those carried over from the previous year with those beginning during the year.

The figures as to the number of employees involved published by some countries show not only the number of employees directly involved, but also the number of those indirectly affected, that is thrown out of work by disputes to which they are not parties; but exact information as to these points is not always given. In the table given herewith the column showing numbers of employees involved includes figures for the numbers directly involved, or the total number directly and indirectly involved according to the method adopted by the country in question.

For some countries, figures as to time loss, that is, the number of "man working days" lost, are not given.

Footnotes to the table indicate the nature of the statistics with reference to the above points. Many countries publish these statistics only once each year or less frequently, the figures being issued in some cases after an interval of some length.

In the following notes as to the more important disputes in various countries in the year 1933, the information is taken chiefly from press reports, information as to individual disputes being not yet available from official reports in most cases.

#### Great Britain and Northern Ireland

The Ministry of Labour Gazette figures show a smaller time loss due to industrial disputes for the year 1933 than for any year during the forty year period for which comparative figures are available.

The principal disputes in 1933 include a strike of 15,000 anthracite coal miners in Wales, which lasted from August 14 to 19. This dispute was over the alleged non-payment of minimum wage rates at certain mines and also over the question of seniority. Work was resumed pending negotiations. Another coal mining dispute involved 1,500 workers in the Pontefract district from June 7 to December 5, over the rates of deductions from pay for dirt in the coal. A compromise settlement was reached.

A strike of 13,000 bus drivers and garage employees in London was in effect from January 21 to 23, over the speeding up of the services, allowing less running time on some routes, and work was resumed on employers' terms.

A dispute involving 4,000 railway workers in Northern Ireland was in progress from January 31 to April 8 and resulted in a settlement as to wage reductions substantially the same as originally proposed by the wages board, that is an additional reduction in rates which made a total reduction of  $7\frac{1}{2}$  per cent from the wage rates in effect before May, 1931, with the annual one week's vacation to be taken without pay.

### Irish Free State

The dispute involving railway workers in Northern Ireland noted above extended to employees of that railway company in the Irish Free State during the same period and was settled under the same terms.

### France

A lockout of the 21,000 employees of certain motor car factories in Paris was in effect, with the exception of a resumption of work for one day, from March 30 to April 24, and resulted in the proposed reductions in wages averaging about 12 per cent being put into effect, although with guarantees of certain minimum rates.

A dispute involving 6,000 weavers at Armentières which began January 4, against reductions in wages and the introduction of the four looms per weaver system instead of two or three looms per weaver, was settled April 24 by the adoption of the proposed system under certain conditions safeguarding the workers and with a reduction of 5 per cent in wage rates.

### Spain

A strike of 27,000 coal miners in the Asturias district took place during February against reductions in staff due to alleged over production of coal. The settlement, reached through the intervention of the Government, provided for a considerable reduction in the number of miners employed but also for a fund for pensioning the discharged workers, such fund to be made up of contributions from both employers and workers.

### United States

Although a greater number of workers were involved in disputes during the first nine months of 1933 than in any year since 1922, there was not a correspondingly great increase

in the time loss recorded, as the disputes were in most cases of comparatively short duration. The principal causes of cessation of work were, on the one hand, demands for increases in wages and improved working conditions with the rise of industrial activity beginning in May, and, on the other hand, disagreement over the interpretation of that section of the National Industrial Recovery Act which provides that employees should have the right to organize and bargain collectively through their own representatives chosen without any interference from the employers, and that no employee or applicant for employment should be required to join any company union or to refrain from joining, assisting or organizing a labour organization of his own choosing. Under this same Act, codes were drawn up for the various industries, providing certain standards for working conditions, wages, hours and methods of collective bargaining. In some cases the strikes were to enforce demands for the insertion of certain clauses in these codes, and in other cases were in protest against their alleged non-observance by certain employers. In August, a National Labour Board was formed by the Government, consisting of representatives of employers and labour, under the chairmanship of a United States senator, and this board was successful in settling a large number of disputes in a short time. Later, Regional Labour Boards in various districts were established to assist it. Appeals by the President of the United States and members of his administration, as well as by certain labour leaders, for industrial peace in order to assist the recovery administration were instrumental in effecting early settlements of some disputes and the prevention of further stoppages of work. The industries most seriously affected by stoppages of work during the year were coal mining and the manufacture of textiles and clothing.

In the bituminous coal mining industry in Western Pennsylvania, the question of union recognition as provided under the National Industrial Recovery Act was the cause of an extensive dispute which was featured by serious disorders and a number of fatal shootings. About July 26, several thousand coal miners went out on strike demanding full recognition of the union and the early conclusion of the bituminous coal code. The strike spread to include between 25,000 to 40,000 miners by August 2, but after an appeal for resumption of work by the President of the United States, a temporary agreement was reached pending the formulation of the code for the industry. The delay in concluding the code, however, resulted in a second cessation of work when about 30,000 miners came out on strike between

September 11 and 15, and remained out after the code was signed September 19, pending its adoption and the full recognition of the union. During the next week the strikers were joined by others until about 75,000 were involved, the chief demand being that the so-called "captive mines", that is those mines owned by and operated for the use of steel companies, should be covered by the same conditions as in the code for commercial mines, and with full union recognition. By October 10, the majority of the strikers had returned to work, but over 20,000 employees of these "captive mines" remained out until the dispute was again terminated by the mediation of the President of the United States on November 3. Under the settlement reached, "captive mines" were to operate under the same conditions of work, wages and hours as the regular commercial mines but the union recognition clauses were somewhat modified, the employers agreeing to the check-off but only for the individual employees who requested it and to collective bargaining with the elected representatives of employees whether or not they were union members. In subsequent elections, most of the elected representatives were union officials and the National Labour Board on January 19, 1934, prescribed a contract, which although it did not include specific union recognition, yet identified the union representatives by their union titles and provided the standard check-off clause as in unionized mines.

About 13,000 employees of a steel manufacturing company at Weirton, West Virginia, and other centres were on strike from September 2 to October 16, when through the mediation of the National Labour Board, it was agreed to resume work without the union recognition demanded, but with the assurance of an election of representatives of the employees with whom the Company agreed to bargain.

The automobile manufacturing industry at Detroit, Michigan, was seriously affected by two strikes of employees of body manufacturers, one involving 6,000 employees from January 23 to February 8, and the second involving 3,000 employees for a week in February; a far greater number, however, were indirectly affected. In the first strike, certain basic minimum rates of wages were conceded by the employers.

A strike of several thousand tool and die-makers employed at automobile plants at Detroit, Michigan, and other nearby centres, which lasted for six weeks, was called off by the union November 6, but no report of the terms of settlement has been noted.

The principal dispute in the textile industry was that in silk manufacturing, affecting practically the whole of the northern section

of this industry situated at Paterson and other centres in New Jersey, in greater New York, at Allentown and other centres in Pennsylvania and in the New England States. Press reports indicated that between 50,000 and 60,000 workers were involved, including both the broadsilk workers' strike which began in Paterson August 31, later extending to other districts, and the dyeworkers (between 15,000 and 25,000 in number) on strike chiefly at Paterson and vicinity, which began about September 11. In the broadsilk strike, the workers made certain demands for minimum wages for skilled workers, but only minimum wage rates for unskilled workers were definitely set in the code for this industry which became effective October 16. After continued efforts to conciliate, the National Labour Board gave a ruling November 2, providing for the payment, to weavers of piece rates which would yield average wages of \$25 per week for a 40 hour week. No further reports have been noted of the strike in other centres, but at Paterson, a one year agreement was made with the manufacturers association employing the majority of the strikers, by which work was to be resumed December 4. The dyers strike, which was settled through the National Labour Board with approximately the same wage rates and hours as for weavers, was terminated October 24.

A two weeks strike of 6,000 cotton mill workers at Manchester, New Hampshire, in May was terminated through the conciliation service of the Government and a 15 per cent wage increase was granted.

Textile workers, numbering 10,000, in several towns in Georgia were on strike from October 22 to November 1, against alleged violations of the code and the dispute was referred to the National Textile Industrial Relations Board.

Strikes of 60,000 dressmakers and 23,000 cloak and suit makers in New York City and surrounding district for one week in August were settled through the National Labour Board and resulted in agreements providing for a 35 hour week with no overtime, certain minimum wage rates and the elimination of unsatisfactory working conditions.

In Chicago, Illinois, about 8,000 ladies garment workers were on strike for two weeks against alleged violations of the code and the settlement reached September 4, through the National Labour Board provided for a 35 hour week, substantial wage increases with certain minimum rates established.

A strike of 14,000 hosiery workers at Reading, Pennsylvania, lasted for two months and

was settled August 10, by the National Labour Board, the settlement providing for no discrimination against union members and for a joint arbitration board. Other disputes in the hosiery manufacturing industry include a strike of 5,000 hosiery workers at High Point and Thomasville, North Carolina from July 7 to August 4, which was settled by the government conciliation service with the provision of a minimum wage of \$12 for a 40 hour week.

A three weeks strike of 25,000 underwear workers in New York City was terminated September 25 through the mediation of the local chairman of the Regional Labour Board, and an agreement made for closed shop, a 37½ hour week and certain minimum wage rates.

The men's neckwear industry in New York City, employing 10,000 workers was affected by a strike lasting nine days in September,

which resulted in an agreement with some of the manufacturers, providing for a 37½ hour week, increased wage rates and the gradual abolition of work in homes.

Strikes in shoe factories in Boston, Haverhill and Lynn, Massachusetts, involving in all about 20,000 workers occurred during March. Agreements were reached in Haverhill, providing for joint negotiations as to wages and working conditions and in Lynn providing for increased wages and improved working conditions, but no report was noted of the result of the strike in Boston.

A two weeks strike of between 12,000 and 15,000 shoe workers in Northern Massachusetts, is reported to have been settled August 11 by the granting of increases in piece rates of 20 per cent thereby giving some increase in weekly earnings with the reduction in hours from 48 to 40 per week.

## "HARMONY IN INDUSTRY"

### Address by the Minister of Labour delivered over the Canadian Radio Commission's System

THE following address, to have been delivered by the Hon. W. A. Gordon, K.C., Minister of Labour, over the Canadian Radio Commission's system, was broadcast from Ottawa on February 2, by the Deputy Minister, Mr. W. M. Dickson, B.A., in the Minister's unavoidable absence owing to indisposition.

Ladies and gentlemen: It is altogether unfortunate that sickness has prevented Honourable Mr. Gordon from delivering the address as he had proposed this evening, as perhaps no man in Canada to-day occupies a position of more direct relationship to industry as a whole than Mr. Gordon, Minister of Labour and Mines, and acting Minister of Immigration and Colonization. By reason of the three important portfolios that he holds in the Dominion Cabinet, he is brought into close contact with the major elements that vitally affect the Canadian industrial structure. In the circumstances it is to be hoped that the unseen audience that will thus be disappointed by not hearing Honourable Mr. Gordon will be lenient with the speaker.

Not so long ago in a small Canadian city throngs of workmen marched in demonstrative parades. Merchants were alarmed, the management of a large industry saw \$60,000 being wasted each day in an idle plant, while \$30,000 daily was being lost in wages to the community. The atmosphere was surcharged with inflamed resentment. It was a condition in which anything was liable to happen. The city, depending chiefly upon this large industry for its existence, was in a state of tension and helplessly witnessed the paralyzing effects of an industrial dispute that touched every civic activity.

Into this super-heated situation there arrived an official who had been hurriedly summoned to the scene. There was that about him which marked him as one detached from the seething excitement of the moment. When he spoke it was without prejudice or bias. It was soon evident that he was a specialist in dealing with such troubles. He made a few simple suggestions, and everybody seemed to instinctively sense that what this man suggested was the obvious thing to do. His sincerity was apparent and his ideas breathed common sense. Confidence was gradually restored and both factions in dispute listened to him. Within thirty-six hours of the arrival

of the Department's conciliation officer a settlement was reached. The city resumed its normal life, and the loss of wages and revenue stopped as a result of the intelligent and tactful efforts of this expert conciliation officer. The importance of a prompt settlement is at once apparent when it is realized that in this instance it meant a daily saving to the management and the employees of approximately \$100,000.

This is but a typical instance of what can be accomplished by a fair and impartial approach to industrial disturbances, actual or threatened. This case has been duplicated by others, large and small, in which the conciliation service of the Department, when given opportunity, has mobilized the common sense of disputants without recourse to wasteful economic hostility.

With the aid of the Conciliation Service of the Federal Department of Labour literally millions of dollars have been directly saved to both employer and employee, and indirectly to the community, which always suffers in a major cessation of industry. And one of the attractive features of this service is that it is free; it does not cost employers or employees one cent to put into operation an absolutely impartial system that seeks only the maintenance of industrial harmony and all that that means in human welfare.

It is much easier for this service to function effectively if it is utilized before the parties to a dispute have declared war on each other. For, let it be thoroughly understood that a strike or a lockout is industrial war in as far as capital and labour can wage war with economic weapons. Too often a group of employees, ill-advised by their leaders, spoil a legitimate claim by expressing their requests in offensive and provocative language. The very wording is unnecessarily hostile in its presentation, with a series of demands as the key note. These demands are frequently made more peremptory by a time limit, often very brief, within which they must be met. Using the word "demand" in such a manner is a poor method of approach. There is nothing friendly or conciliatory about it. In short, it is nothing less than an ultimatum to an employer who is probably sufficiently harassed by the strain of keeping his plant operating.

Then, too, it sometimes happens that employers are too hasty in their relations with their employees. It seems reasonable to con-

sider that industry in reality is a partnership. That being so, a committee of employees can frequently offer the management helpful suggestions. A willingness on the part of the employer to listen is not a weakness; it is an evidence of good-will and confidence. Employers should also bear in mind that employees in these recent critical years have been very patient under conditions that have been most trying indeed.

The solution of disputes can usually be found in a friendly atmosphere, but if this is destroyed the damage is far greater and far harder to repair. Frequently a dispute occurs over something that should have been frankly discussed across a table. But either the method of approach was wrong and ill-timed, or either or both parties to the dispute failed in some respect. In all probability direct negotiation was never given a chance. Then the inevitable resulted. Murmurs of discontent were followed by separate meetings of the disputants. From these emanated charges and counter-charges in the press—heated statements about alleged sweat-shop methods, or unsafe and unsanitary factory conditions; then reprisal charges of slackened efforts, soldiering on the job and even sabotage. Such undesirable publicity cannot fail to create an atmosphere of bitterness and suspicion. Such an atmosphere breeds strikes, and strikes result in lost wages and productivity. If that condition continues, it is apt to degenerate into open strife. This sometimes develops to the point where the civic authorities are forced to take steps to maintain law and order. Thus the vicious circle of expenditure and waste mounts to a staggering sum, with the taxpayer in the end paying the bill.

How much more satisfactory it would be if the matters in dispute were first talked over dispassionately, and then, failing agreement, the conciliation services of the Department sought. It is much easier to settle a dispute in its early stages, when the voice of conciliation can urge common sense and fairness, than to break down a barrier of bitterness.

Judging by the requests received in the Department for assistance by way of mediation, there is evident in Canada an increasing recognition on the part of both employers and employees of the value of such service before an actual break in working relations occurs. Experience is of the highest value in conciliation work, and many a dispute which has baffled employers and work-people alike is solved by the help rendered by a conciliation officer who has previously encountered a similar set of circumstances, and in whom both sides can place the utmost reliance as a mediator.

The Department is equipped with both the legislative authority and the trained personnel to assist employers and employees to compose their differences. The procedure is quite simple and the service is prompt. Under the provisions of the Conciliation and Labour Act the Minister is empowered to inquire into the causes and circumstances of a dispute, and to take such steps as seem expedient for the purpose of bringing the parties together. He can also appoint a conciliator when requested by either of the parties to a dispute, but it is of course preferable that a joint request be made.

During the past year the Department's conciliation officers mediated successfully in some thirty disputes, many of which were of a difficult nature. In fourteen of these disputes the settlement directly effected by the Departmental officer obviated the necessity of establishing a Board of Conciliation under another enactment known as the Industrial Disputes Investigation Act, which practically supplements the Conciliation and Labour Act, and was enacted to aid in the prevention and settlement of strikes and lockouts in mines and industries connected with public utilities. The industries to which the Industrial Disputes Investigation Act directly applies are those employing ten or more persons engaged in mining, transportation and communication, including steam, electric or other railways, steamships, telegraph and telephone operation, or in gas, electric light, water and power works. In these industries it is illegal for an employer to lock out his workmen or for the employees to go on strike until the matter in dispute has first been dealt with by a Board of Conciliation. It will be readily seen that the industries just cited are those in which the public or national interest must of necessity be paramount. But in addition the Act provides that in case of a dispute in any industry a Board can be established upon joint application of the parties concerned.

A Board consists of three members—one nominated by the employer, one by the employees, and a chairman selected by agreement if possible by the other two. Failing agreement in the selection of a chairman, the Minister of Labour makes this selection himself. The very fact that in only 38 out of 525 Boards has the threatened or actual strike not been averted or ended indicates the high quality of Board personnel. It also demonstrates the unquestioned efficacy of the conciliation machinery of the Federal Labour Department. While the findings of a Board are not binding, and leave the parties concerned absolute freedom of action, yet in the great majority of cases either the Board has been successful in arranging an amicable

settlement, or its recommendations have formed the basis of subsequent agreement. Therefore, when conciliation on such an impartial and free basis is so easily available, is it not wise, and even profitable, to utilize it before taking hasty action?

During the trying period through which we have been passing the courage of the Canadian people has remained undaunted, and I am particularly proud to state that Canada has been free from any major dislocation of industry. At the same time I desire to pay tribute to the patience and morale of employer and employee alike.

Now that we are emerging out of the shadows is it not equally important that we continue unhampered, ready to make the best of our opportunities. Team play—harmony in industry—was never more essential than at this hour if Canadian industry is to reap those honest rewards that will not only ensure commercial prestige abroad, but make for a happy and prosperous people at home. It is almost a personal and national obligation that we eliminate all wasteful strife and concentrate on the goal that we see in this new vista of approaching prosperity.

### Fisheries in Canada in 1932

The annual report on Fisheries Statistics of Canada, covering the year 1932, has been published recently by the Dominion bureau of Statistics, having been prepared in collaboration with the Dominion and Provincial Fisheries Departments. The growth of the industry from the earliest times is described, and full statistics are presented showing the production and value of various kinds of fish in each province in recent years, the capital invested in the industry, including vessels of all types, and the number of employees engaged both in primary operations and in fish canning and curing establishments.

During the calendar year 1932, the quantity of fish landed by Canadian fishermen showed a decrease of approximately 143,320,000 pounds as compared with the total catch for 1931. The explanation is in the unsatisfactory world economic conditions which prevailed throughout the year. The productive capacity of Canada's fisheries resources is stated to be so great that the Dominion has always to look to world markets to absorb the larger part of its output, and with the market situation everywhere so badly unsettled in 1932 the operations of the fishing industry were naturally conducted on a reduced scale, although the actual total number of persons engaged in fishing was lifted above the 1931 figures by the presence of men who had apparently found themselves temporarily unable to obtain steady employment in their usual vocations. With the year's production reduced, and with prices low, the marketed value of the 1932 output was, of course, substantially less than in the preceding year. All told, it amounted to \$25,957,109, which was less than the 1931 return by slightly more than \$4,500,000. The marketed value decreased both in the case of the sea fisheries and in that of the inland or

fresh-water fisheries. The sea fisheries accounted for \$21,763,087 of the total, as compared with \$25,783,101 in the previous year, and the inland fisheries for \$4,194,022, or an amount which was \$540,183 below the 1931 figure.

The number of fishermen employed in the sea fisheries in 1932 was 53,932, and in the inland fisheries, 10,573, a total of 64,505, compared with a total of 61,832 in 1931. The total number of employees recorded by fish canning and curing establishments in 1932 was 13,724, an increase over the preceding year of 653. The number of employees in the fishing industry as a whole in 1932, including men employed in the primary operations (64,505), and workers in establishments (13,724), was 78,229, compared with 74,903 in 1931.

There were 629 fish canning and curing establishments in operation in Canada in 1932, this total comprising 442 canneries, 156 fish curing establishments, 13 freezing plants, and 18 reduction plants. The number of persons employed in the establishments in 1932 totalled 13,724, compared with 13,071 in 1931. The total for 1932 includes 486 salaried employees, 9,799 wage-earners, and 3,439 contract and piece workers. The salary and wage bill for the year amounted to \$2,821,878, a decrease from the preceding year of \$360,997.

There were 3,807 accidents reported to the Ontario Workmen's Compensation Board during the month of January, as compared with 3,421 during December, and 2,643 during January of last year. The fatal cases numbered 16, as compared with 14 last January. The total benefits awarded amounted to \$346,370.01, of which \$288,314.23 was for compensation and \$58,055.78 for medical aid. The total benefits awarded last January were \$237,056.88.

## CONFERENCE OF DOMINION AND PROVINCIAL GOVERNMENTS AT OTTAWA

THE governments of Canada and the Provinces held a conference at Ottawa, commencing on January 17, and concluding on January 19, for the purpose of considering various matters of policy affecting the Dominion. The Dominion Government was represented by the Right Hon. R. B. Bennett, Prime Minister (who presided); the Hon. Hugh Guthrie, Minister of Justice; Hon. E. N. Rhodes, Minister of Finance; Hon. W. A. Gordon, Minister of Labour; Hon. Robt. Weir, Minister of Agriculture; Hon. R. J. Manion, Minister of Railways and Canals; Hon. C. H. Cahan, Secretary of State; Hon. T. G. Murphy, Minister of Interior; Hon. Murray MacLaren, Minister of Pensions and National Health; Hon. Alfred Duranleau, Minister of Marine; Hon. H. A. Stewart, Minister of Public Works; Hon. Maurice Dupré, Solicitor-General; Hon. C. H. Matthews, Minister of National Revenue; Hon. H. H. Stevens, Minister of Trade and Commerce; Hon. D. M. Sutherland, Minister of National Defence; Hon. A. Sauvé, Postmaster-General, was unable to attend owing to his absence from Canada.

The provincial delegations were as follows:—

British Columbia; Hon. T. D. Pattullo, Premier; Hon. John Hart, Minister of Finance; Hon. G. M. Weir, Provincial Secretary and Minister of Education; A. McG. Sloan, Attorney-General; Hon. G. S. Pearson, Minister of Mines and Labour; and S. F. M. Moddie, assistant to the Prime Minister.

Alberta: Hon. J. F. Brownlee, Premier; Hon. E. G. Reid, Provincial Treasurer; and J. F. Percival, Deputy Provincial Treasurer.

Saskatchewan: Hon. J. T. M. Anderson, Premier; Hon. M. A. McPherson, Provincial Treasurer and Attorney-General; Hon. T. Stipe, Minister without portfolio; A. J. Hosie, Debt Adjustment Commissioner; and T. Lax, Superintendent of Revenue.

Manitoba: Hon. John Bracken, Premier; Hon. W. J. Major, Attorney-General; Ralph Pearson, Deputy Provincial Treasurer; and A. MacNamara, Assistant Deputy Minister of Public Works.

Ontario: George S. Henry, Premier; Hon. W. H. Price, Attorney-General; Edward Bayley, Deputy Attorney-General; R. Leighton Foster, Superintendent of Insurance; and Lieut.-Col. George A. Drew, Commissioner of Securities.

Quebec: Hon. L. A. Taschereau, Premier; Hon. J. E. Perrault, Minister of Public Works;

Charles Lanctot, K.C., Deputy Attorney-General; and Ivan E. Vallee, Deputy Minister of Public Works and Director of Relief; M. L. Guimont, Unemployment Commissioner.

New Brunswick: Hon. L. P. D. Tilley, Premier; Hon. W. H. Harrison, Attorney-General; Hon. Antoine Leger, Provincial Treasurer; Hon. D. A. Stewart, Minister of Public Works; D. Leo Dolan, Director of Information; and A. W. Barbour, Deputy Minister of Public Works.

Nova Scotia: Hon. Angus L. Macdonald, Premier, and D. F. Mathers, Deputy Attorney-General.

Prince Edward Island: Hon. W. J. P. MacMillan, Premier; Hon. H. M. MacPhee, Attorney-General; and Hon. G. Shelton Sharp, Minister of Public Works.

### The Agenda

The official agenda of the conference was as follows:—

#### *Items suggested by the Federal Government:*

Unemployment and relief measures.

Financial position of the provinces.

Enactment of a uniform companies act.

#### *Additional items suggested by Provincial Governments:*

From British Columbia: Taxes and customs on liquor. Absorption of the Pacific Great Eastern Railway by the Canadian National System.

The appointment of a royal commission to hear the claim of British Columbia for equality of treatment with other provinces.

From Alberta: Marketing board.

From Saskatchewan: Assisted Land Settlement.

From Alberta and Saskatchewan: Agricultural short term credits.

From Quebec: Authorization of lotteries for charitable purposes.

### Recommendations of Conference

On the conclusion of the sessions the following official report was issued:

"The conference adopted the following recommendations for 1934:

"1. That until such times as the large numbers of unemployed throughout Canada have been substantially absorbed, either by improved industrial employment or by public works, federal assistance to the provinces should be continued on the basis of the prov-

inces dealing with present economic conditions by the distribution of direct relief as provided in the existing agreement between the Dominion and the provinces.

"2. That the government of Canada should co-operate with such provinces as will organize commissions to administer relief funds, under such conditions as may be agreed upon.

"3. That the time has arrived when a program of municipal and public works should be undertaken to absorb as large a proportion of the unemployed as possible, and that any such works should be commenced early in the spring in order to be effective in limiting the demand for direct relief in the following winter.

"4. That the various provinces represented at the conference have no objection to the federal government giving special consideration to provinces where conditions warrant.

"5. That the existing agreements providing for land settlement be altered to permit of a further expenditure of not more than one hundred dollars per family to provide for additional subsistence during the third year of settlement.

"In respect to recommendation No. 1 above, the Dominion government and the provincial representatives are united in the hope that a total discontinuance of direct relief can take place at an early date.

"Enactment of a uniform Companies Act:

"The law officers of the several provinces or their deputies met Thursday, January 18, to consider a draft Companies Act which had been submitted to them by the secretary of state.

"Representatives of several of the provinces suggested that they would probably retain the form of act which has already been adopted by their respective legislatures, such as incorporation by letters patent, or by memo-

randum of association or by grant from the Crown; but that this would not preclude the acceptance by all the provinces of the material provisions of such a bill as may be agreed upon.

"After a general discussion of the scope of the draft bill then presented, the unanimous opinion was expressed by the provincial representatives that the law officers of the several provinces should, on or before March 1 next, send to the secretary of state suggestions of such amendments or changes in the draft bill as they might deem expedient, and that, thereafter, the secretary of state should convene at Ottawa such law officers or their representatives as could conveniently attend, for a further discussion of proposed amendments or changes in the draft bill; and that, in the meantime, the draft bill should not be widely distributed nor introduced to the Parliament of Canada for public discussion.

"Other subjects on the agenda were discussed but without formal action by way of resolution of the conference.

"On the matter of agricultural short term credits, introduced by Alberta and Saskatchewan, an exchange of views took place.

"The subject is receiving the consideration of Dominion and provincial authorities, as recommended by the Royal Commission on Banking and Currency, with a view to the formulation of a practicable measure to fill this need.

"The question of the authorization of lotteries for charitable purposes, raised by Quebec, involves the provisions of the Criminal Code, which is a matter under the jurisdiction of the Dominion Parliament. It was stated that the question is one which, so far as the Dominion government is concerned, might be freely discussed in Parliament without adherence to party lines.

## Old Age Pensions Bill in U.S.A.

A Bill "to protect labour in its old age" was introduced recently in the United States House of Representatives, The United States Old Age Security Act, as it is entitled, provides for an annual appropriation out of the Treasury of \$10,000,000 to be apportioned among the States and Territories to aid them in giving assistance to aged persons under the conditions of the statute. In order to receive the benefits of this legislation, the State or Territory shall through its Legislature accept the provisions of the Act and designate the proper authority to co-operate in its administration and supervision of expenditure. The rules and regulations of the enactment are to be established by an Old Age Security

Bureau created in the Department of Labor which is to be the Federal agency to function with the States authorities. The qualifications necessary to entitle an aged person who is a citizen of the United States to relief under the Act are: (1) residence in a State or Territory for a period of years determined by the State authority; (2) that he is 65 years of age; (3) that he does not possess property in excess of \$5,000; (4) that he has no child or other person responsible and able for his or her support. Under the plan the pension payment must be a minimum of one dollar per day. If the States decide to pay more than this minimum they are required to meet the extra additional cost. The Federal Government's allotment is one-third of the minimum pension payments.

## OLD AGE PENSIONS IN CANADA

## Financial Summary as at December 31, 1933

THE accompanying table gives a financial summary, to December 31, 1933, of operations under the Old Age Pensions Act (Revised Statutes of Canada, 1927, Chapter 156, amended by Statutes of 1931, chapter 42) and under the concurrent Acts adopted by the provinces participating in the scheme.

The Old Age Pensions Act which was adopted by the Nova Scotia Legislature in 1931, was proclaimed on September 5, 1933 (LABOUR GAZETTE, September 1933, page 875) and it will come into operation on March 1, 1934, under an agreement recently completed between the Dominion and Provincial governments.

## FINANCIAL SUMMARY OF OLD AGE PENSIONS IN CANADA AS AT DECEMBER 31, 1933

	Alberta	British Columbia	Manitoba	Ontario	Prince Edward Island	Saskatchewan	North-west Territories	Totals

The Quebec Legislature adopted the following resolution on January 31: "Whereas the Quebec Social Insurance Commission recommends the adoption of a system of assistance to indigent mothers: this House is of opinion that as soon as the financial position of the

Province will allow it the Government consider the possibility of creating this system of assistance to indigent mothers." (The recommendations of the Commission on the subject of Mothers' Allowances were given in the LABOUR GAZETTE, February, 1932, page 172.)

## DOMINION GOVERNMENT EMPLOYEES' COMPENSATION IN 1932-33

**I**NCLUDED in the annual report of the Department of Railways of Canals for the fiscal year ending March 31, 1933, is a statistical review of the administration of the Government Employees' Compensation Act (Revised Statutes of Canada, 1927, chapter 30). This legislation is administered by the Department for the entire government service by reason of the fact that the Department has to maintain a staff for that purpose owing to the extent of the railway construction and operation activities under its control.

The provisions of the Act, which was adopted in 1918, are as follows:—

1. (1) An employee in the service of His Majesty who is injured and the dependants of any such employee who is killed, shall be entitled to the same compensation as the employee, or as the dependant of a deceased employee, of a person other than His Majesty would, under similar circumstances, be entitled to receive under the law of the province in which the accident occurred, and the liability for and the amount of such compensation shall be determined in the same manner and by the same boards, officers or authority, as that established by the law of the province for determining compensation in similar cases, or by such other board, officers or authority or by such court as the Governor in Council shall from time to time direct.

(2) Any compensation awarded to any employee or the dependants of any deceased employee of His Majesty by any board, officer or authority, or by any court under the authority of this Act, shall be paid to such employee or dependant or to such person as the board, officers, or authority or the court may direct, and the said board, officer, authority and court shall have the same jurisdiction to award costs as in cases between private parties is conferred by the law of the province where the accident occurred.

In 1925, the Act was amended so as to provide that compensation should include medical and hospital expenses, the new section being retroactive in its operation to May 24, 1918.

Compensation paid under the Government Employees Compensation Act now amounts to a cumulative total of \$3,687,853.23 since 1918-19, and during the same period the Dominion's proportion to administration expenses has amounted to \$284,283.37. Commenting on the year's administration the report states:—

"The work of the branch appears to have been affected during the year by the receipt of an unusual number of dubious claims involving considerable work in investigation and examin-

ation of evidence. It appears that the tendency towards an increase in the presentation of questionable claims has been further increased by the decrease in employment and it is perhaps advisable to repeat from the report of last year that the impressively large number of general claims developing from the engagement of temporary employees, particularly those engaged under emergency relief and associated programs of work would appear to indicate the advisability of arranging for competent medical inspection prior to engagement of such employees."

Exclusive of the Canadian National Railway System the total Dominion expenditures under the Act in 1932-33 amounted to \$186,857.23. This amount was paid out for a total of 1,791 claims, of which 616 involved compensation and medical aid, 938 medical aid only, and 237 pensions.

Exclusive of the Canadian National Railways, other departments having a considerable number of claims and large disbursement expenditures were as follows:—

Public Works—367 claims totalling \$51,256.16 disbursements.

Railways and Canals—467 claims totalling \$36,971.67.

Interior—208 claims, totalling \$24,113.78.

Marine—239 claims, totalling \$19,646.96.

Hudson Bay Railway—47 claims, totalling \$9,084.95.

Post Office—201 claims, totalling \$8,325.96.

Hudson Bay terminals—18 claims, totalling \$6,766.57.

National Defence—63 claims, totalling \$6,627.08.

Fisheries—30 claims, totalling \$6,260.04.

The accompanying table indicates the payments under the Act, during the year ended March 31, 1933.

Provincial Board	Dominion expenditure, including amount advanced	Disbursements	
		Compensation, Pensions, etc.	Proportion of Administration expenses
	\$	\$	\$
Nova Scotia.....	19,811 16	14,699 17	5,840 41

## Report of United States Employees' Compensation Commission

The seventeenth annual report of the United States Employees' Compensation Commission reviews the administration of the three workmen's compensation enactments covering government employees during the year ended June 30, 1933. These three laws are as follows: (1) United States Employees' Compensation Act; (2) Longshoremen's and Harbour Workers' Compensation Act (covering employees in certain maritime employments); and (3) District of Columbia Workmen's Compensation Act (covering employees in certain employments in the District of Columbia).

The Commission is a "bipartisan body, consisting of three members appointed by the President by and with the advice and consent of the Senate, one of whom is designated by the President to serve as chairman."

The number of employees to whom the first-named act is applicable increased to the highest total in the history of the Commission as a result of the many relief measures put into operation since March 4, 1933. It is estimated that this law is now applicable at times to over 1,000,000 employees as compared with about 700,000 during recent years. At the close of business on December 31, 1932, approximately 6,800 cases under the Act were open in the records of the Commission in which compensation was being paid currently. Compensation in the total amount of \$1,398,396 was paid during the year ended December 31, 1932, in the form of death benefits to 4,303 dependents of 2,389 deceased employees. Death benefits were awarded during the year in 144 new cases in which there were 311 dependents entitled to compensation. The average monthly compensation award in fatal

cases approved during the year was \$56.74. The average award in new cases approved during the four preceding years is: \$54.68 in 1931; \$54.99 in 1930; \$58.83 in 1929; and \$55 in 1928. On December 31, 1932, compensation for disability was being paid in 1,936 cases in which it appeared the disability was permanent or of long, indefinite duration. In 570 cases the disability was total, and in 1,366 cases it was partial. The cases included under this classification show an increase of 131 as compared with the number on hand at the close of the preceding year. The number of cases in which compensation was being paid for total disability decreased from 611 to 570. In 13,991 cases disposed of during the year the temporary disability due to the injury caused 534,061 days' loss in time, which is the equivalent of a year of employment for some 1,500 employees.

Under the Longshoremen's and Harbour Workers' Compensation Act, as well as the District of Columbia Workmen's Compensation Act, the employers are required to secure the payment of compensation, etc., either by qualifying as self-insurers or by providing insurance with some authorized insurance carrier. The statistics of the Longshoremen's Act indicate that during the fiscal year ended June 30, 1933, there were 19,551 non-fatal and 95 fatal injuries reported under this law in the 12 compensation districts. During that period the total compensation paid in non-fatal cases was \$1,776,562 and the disbursements in fatal cases amounted to \$428,963.

Under the District of Columbia Workmen's Compensation Act in the year ending June 30, 1933, there were 19,742 non-fatal and 48 fatal accidents reported.

The Dominion Bureau of Statistics recently published a report entitled "Statistics of Electric Railways of Canada" which in a series of tables reviews the chief factors entering into electric railway transportation during the calendar year 1932. In that year there were 15,961 employees (including general officers, superintendents and clerks) on the payrolls of the 45 reporting companies, and these received in wages and salaries a total of \$21,534,419.50. In 1931, there were 17,135 employees receiving \$24,647,391.17 in salaries and wages. During the year 3 passengers were killed, all on one railway, also 29 motorists, 42 pedestrians, 2 employees, one person riding in a vehicle other than an automobile and one other person were killed, making a total of 79 persons killed, as against 65 in 1931. Collisions accounted for 76 of these deaths. The number of persons injured was 3,542, in-

cluding 2,098 pedestrians, 279 motorists, 47 persons in other vehicles, 157 conductors and motormen, 17 bus operators, 391 other employees and 92 other persons. This was the smallest number of persons injured by electric railways in the past ten years.

The Speech from the Throne at the opening of the present session of the Legislature of the Province of Quebec on January 9 announced that the government would submit legislation to provide for the judicial enforcement of collective labour agreements. Under such a law, where a group of employees and employers agree on working hours and rates of wages in a certain district, the Minister of Labour could, upon deposit with him of a copy, decree that this shall be the rate of pay to rule throughout the district in a given industry.

## WAGES AND HOURS IN AUTOMOTIVE TRANSPORT INDUSTRY IN ONTARIO

### Outline of Report by Provincial Department of Labour

NOTE was made in the LABOUR GAZETTE, December, 1933, of the inquiry recently undertaken by the Ontario Department of Labour into wages and hours of labour of truck drivers in the Province. This action was taken on the suggestion of representatives of the Canadian Brotherhood of Automotive Transportation Employees. The Department has lately issued a report, prepared by Mr. A. W. Crawford, Deputy Minister of Labour of the Province, under the title "Wages, Hours and Working Conditions in Automotive Transport Industry," presenting the facts collected in the course of the inquiry, and making suggestions and recommendations. The following paragraphs are taken from the report.

Reports received by the Department of Labour from various sources have indicated very unsatisfactory conditions of work for employees in the automotive transport industry of Ontario. It has been stated that excessively long hours of driving, very low rates of wages, and irregularity of employment are the chief factors in the present undesirable state of affairs. The strain of long hours has been reported as injurious to the health of many drivers and as constituting a grave danger on the highways. Instances have been cited of accidents due to fatigue on the part of truck drivers. These accidents, it is claimed, have resulted in serious injury and even death to others on the highway as well as to the drivers themselves. Such a condition, if it exists, is highly detrimental to the welfare of the drivers and affects the safety of the public.

Questionnaires were sent out to 324 firms and replies have been received from 280 firms, or approximately 85 per cent of the total. Several firms reported having discontinued operations temporarily or permanently, or having been taken over by other firms. The firms reporting as employing local drivers only, or having owner-drivers or members of own family only as drivers, have not been taken into consideration in compiling this report. For these reasons 70 firms have been eliminated and replies from 210 firms have been analysed. The 210 firms reported a total of 1,446 drivers, classified as follows:—584 highway drivers, 296 highway drivers doing pickup work, and 566 local drivers, which numbers do not include part-time drivers, definitely stated as such.

From the certified statements made by these employers it is evident that satisfactory con-

ditions exist in a certain number of firms, some of which are large and some small. These firms are able to regulate their business in such a manner as to provide steady employment for their employees, and a fair weekly rate of wages for regular hours of not more than 60 per week. This fact is worthy of special note when it is considered how wide is the range in both wages and hours reported by many firms.

*Daily Hours.*—In reply to the question "What is the length of the basic day?" 198 firms reported hours ranging from 3½ to 15. Of this number 6 firms reported a basic working day of more than 10 hours; 102 reported a day of 10 hours; 80 from 8 to 10 hours, and 10 reported a day of less than 8 hours. On the other hand, from the figures supplied regarding the numbers of hours of work per day, per week, and for a stated week, the following information has been obtained with reference to 1,265 drivers:—

- 48 drivers are reported as working 36 hours a week or less.
- 94 drivers are reported as working 38 to 47.
- 97 drivers are reported as working 48.
- 107 drivers are reported as working 49 to 53.
- 87 drivers are reported as working 54.
- 121 drivers are reported as working 55 to 59.
- 157 drivers ranging under 60 per week.
- 357 drivers are reported as working 60 hours a week.
- 197 drivers are reported as working over 60 hours a week.

The length of the week as reported for these drivers ranged up to 99 hours. The number reported working over 60 hours per week, 197, represents over 15 per cent of the 1,265 drivers. As already stated, it is probable that the numbers of hours of many drivers working a long week have been totalled with those of many drivers on short time, thereby giving no indication of such overtime, and also that the abuse of great overstrain may exist even in a short week due to two or three successive days of driving without adequate rest. Moreover, one of the largest firms reported inability to supply a record of drivers' hours, thus indicating a laxness in this regard which is probably rather prevalent in the industry.

Despite incomplete data, ample evidence has been supplied by both employers and employees of excessive hours of work for a fairly large proportion of drivers in the automotive transport industry.

*Wages.*—As regards the wages of drivers, it is not possible to give a true and complete picture of existing conditions because of inadequate information returned by employers. A tabulation of the figures supplied, together with special cases reported, indicates that actual earnings for many drivers are not sufficient to maintain a decent living standard, and are not commensurate with the time, labour or responsibility of their employment. Out of a total of 1,228 drivers, 93 are reported to be receiving \$12 per week or less; 247 drivers to be receiving from \$13 to \$17 per week; 145 to be receiving \$18 per week, and 162 to be receiving from \$19 to \$20 per week. 369 drivers are reported as receiving from \$21 to \$24 per week and 212 as receiving \$25 a week or over. Of these drivers, 485, or approximately 39 per cent of the total are reported as receiving \$18 per week or less.

The above figures are the weekly rates although in many cases lower wages have been paid because of short time. In many instances employees are not paid for all time held for duty but only for the time actually worked. It may be considered, therefore, that wages received are at a lower rate than outlined in the preceding paragraph since, in addition to the hardship of too long hours, there is prevalent a considerable volume of part-time employment for which weekly earnings are below a fair or even a subsistence level, despite a satisfactory weekly rate. On the other hand, some employers pay the full week's wages whether the full time is worked or not.

Although the information supplied by employers regarding warehousemen and other employees has not been tabulated, it is evident that unsatisfactory conditions exist for these workers also in many firms in which long hours and low wages prevail.

*Views of Both Parties.*—A summary of the information given on the questionnaires provides ample evidence of lack of stability in the industry.

Before undertaking this investigation, letters were sent to the secretaries of the Automotive Transport Association of Ontario and of the Canadian Brotherhood of Automotive Transportation Employees, with copies of the proposed questionnaire and a brief statement of what the Department of Labour was undertaking in this regard. Each association was requested to appoint a small committee to meet with the Deputy Minister. This was done and the information contained in the foregoing pages (of the report) has been placed before both committees. The consensus of opinion of both employers and employees was that the picture of conditions in the industry

as depicted by the information submitted by employers was more favourable than is actually the case, and each group cited case after case of excessively long hours. They considered it unlikely, for instance, that only 15 per cent of the drivers were working over 60 hours a week as shown in this report. Some of the employees' group considered that 80 hours per week would be nearer the average than 60, and that a considerably greater proportion of the drivers were receiving wages below \$18 per week than the returns indicated.

The situation as represented by the employers' committee is too many are engaged in the industry at the present time, that underbidding for business has resulted in unstable conditions, that one set of employers cuts wages because they have cut prices, while another set must cut either wages or staff, or operate at a loss, because they have lost business to the operators who have cut prices. They claim that some regulation as to minimum wages and maximum hours for drivers would be beneficial to both employers and employees, as being an important step toward stabilization in the industry. Underbidding would be less desirable for employers if they had to pay at least a minimum wage for a normal working week.

Asked as to what might be considered a fair minimum wage for drivers, the employers' committee intimated that their association was prepared to recommend a minimum wage of not less than \$18 a week for city drivers and not less than \$25 a week for highway drivers, with a maximum of 10 hours per day and 60 hours per week. The committee recommended that substantial penalties be provided which should include suspension of Public Commercial Vehicles licence for the repetition of offences.

Generally speaking, the employees committee concurred in these recommendations. The representatives stated that the worst offenders as regards hours and wages were among the firms running long trips where employees are paid by the trip. The price for the trip is set for the minimum time in which it can be possibly be made, the time allotted being cut to such a fine point that no allowance is made for any emergency, so that drivers are rarely paid for the time actually required for making the trip. This, they state, is a very unsatisfactory method and gives rise to a great deal of unsafe speeding on the highway. The representatives of the employees claimed also that with shorter hours there would be sufficient work for all, and if prices were standardized in the industry, it would be possible for all employers to pay good wages. The committee reported poor equipment as being one of

the dangers on the highway and recommended more rigid inspection. They felt that the issuing of licences should be conditional on proper up-keep, with a penalty for any breach in this respect. Some system of reporting on the condition and repairs of all highway trucks to the Motor Vehicles Branch, Department of Highways, was suggested, as well as the setting of an age limit and the requirement of a physical test for all highway drivers.

*Proposed Schedule.*—A proposed schedule or agreement between employers and employees governing wages, hours, employment tests, and general working conditions was submitted by representatives of the Canadian Brotherhood of Automotive Transportation Employees. This proposed schedule was not discussed with the committees of employers and employees (It is attached to the report as an appendix). We were informed that it is based on similar schedules in operation on the railways and that it represents what the union believes to be fair working conditions in the industry.

The wages stipulated in the proposed schedule are higher than the minimum rates suggested by the committee representing employers, the rates for drivers being as follows:

\$30 per week for highway drivers operating one hundred miles or less per day.

\$35 per week for daily mileage from one hundred to two hundred miles.

\$40 per week for drivers operating more than two hundred miles per day.

\$28 per week for local and pickup drivers.

The schedule of wages (article 30) includes all classifications and divisions of the industry. The schedule provides for an 8-hour day and 6-day week with extra pay for overtime. Article number 31 sets forth the requirements of mental, physical, and mechanical tests to be applied to highway drivers.

*Conclusion.*—Sufficient evidence has been collected to prove that a very unsatisfactory and unstable condition exists in the automotive industry which can be remedied only by the joint action of employers and employees supported by legislative and regulatory action on the part of the Provincial Government and possibly the Dominion Government also. Governments cannot remedy such industrial conditions without the active, whole-hearted support and co-operation of at least a majority of employers and employees affected, nor can the industry itself bring about satisfactory working conditions and profitable operation without the assistance and support of the legislative and administrative bodies of Government. Co-operative action is essential.

*Summary of Conditions.*—The outstanding weaknesses and problems of the industry may be briefly summed up as follows:

1. Under-payment of drivers and other employees.

2. Improper and unsatisfactory methods of pay, especially a fixed amount per trip.

3. Excessive hours of employment coupled with great irregularity.

4. Too many operators, resulting in cut-throat competition for business, which reduces the charges for transportation services below the actual cost.

5. Inadequate business methods and records on the part of many operators which make it impossible to estimate costs and establish fair prices for services rendered.

6. Difficulties in enforcing the Public Commercial Vehicle Act in connection with markers, classifications, hours, etc.

It appears to be highly desirable that annual joint agreements, between employers and employees be entered into which shall regulate wages, hours and conditions of employment or that some action be taken to compel all employers in the industry to pay at least specified minimum rates of wages for regulated hours of employment. Agreements similar to that submitted by representatives of the employees would undoubtedly help to stabilize conditions, but it would be very difficult to organize all employees and employers in the Automotive Transport Industry under such agreements within a reasonable time. It would seem, therefore, that legislative action setting forth minimum wage rates for stipulated hours of employment is the only immediate method of dealing with this problem. The difficulty would be to enforce such regulations in an unorganized and very unstable industry.

If wages are to be raised and hours shortened it is apparent that some action must be taken to increase and regulate the charges for transportation services. (Reference is made here to the conference held at Ottawa under the Minister of Railways and Canals on December 13 to discuss certain problems of the automotive industry)\*. A suggestion from the employers, which might well be considered by such a conference, is that a tariff of carrying charges for highway transportation be established similar to that for railway and steamship transportation.

It is not within the purview of this investigation to deal with the problems and difficulties in connection with the enforcement of the Public Commercial Vehicle Act, but this matter has been receiving the attention of the Ontario Department of Highways for some time. The Department has been co-operating with the Automotive Transport Association of Ontario in connection with alleged violations

\*See note on page 96.

of the Act and, in some cases, licences have been cancelled. It is understood that the Department is considering the introduction of certain amendments to the legislation along the lines suggested by employers at the forthcoming session of the Legislature.

"While the investigation," the report concludes, "has revealed unsatisfactory conditions

which can only be remedied by co-operative action along the lines indicated, it might be well to point out that the initiative for such action should come from the industry, and that there are as yet comparatively few employers or employees who have shown any willingness to make the personal sacrifices necessary to make such action effective."

## ANNUAL REPORT ON MINING IN ALBERTA IN 1932

THE annual report of the Mines Branch of the Alberta Department of Lands and Mines for the year ending December 31, 1932 (recently issued), shows that the total output of coal produced in the province during that period was 4,870,030 tons, with a valuation of \$13,441,193, an increase of 305,740 tons over the output for 1931. Included in the total were 2,046 tons produced by farmers under permits granted for the purpose of obtaining coal for their own use. In addition to the coal reported, it is believed there was a considerable tonnage produced by farmers without permit or lease, of which there is no record.

Of the total coal produced, 1,134,311 tons were sold for consumption in the Province of Alberta, 1,751,294 tons in other provinces of Canada, 27,366 tons for consumption in the United States, 1,619,921 tons sold to railroad companies, 12,629 tons used making briquettes, 4,591 tons used making coke, 179,597 tons used under colliery boilers, 7,025 tons used by colliery railroads, 44,115 tons put to stock, and 130,528 tons put to waste. The tonnage shown as sold for consumption in Alberta includes 2,046 tons produced by farmers for their own use. In addition to the coal mined there were 8,446 tons of shale and clay mined, from which 3,444,010 bricks and 182 tons of tile were manufactured.

During the year there were in operation 3 shale pits producing shale and clay for use in the manufacture of brick, hollow tile, etc., also 307 coal mines; of the latter, 32 were opened, 14 reopened, and 44 abandoned. In addition to the mines abandoned there were 25 mines closed temporarily, leaving 283 mines in operation at December 31, 1932.

On December 31, 1932, the total number employed in all the coal fields—domestic, sub-bituminous and bituminous—was 10,296, of which 7,825 were underground workers. Of the total employed, 6,524 were in domestic fields, 850 in sub-bituminous and 2,922 in bituminous coal mining. The *per capita* production in all fields, based on the average total (7,837) employed was 621 tons per man employed, and 844 tons per man employed underground.

A summary of the statistics presented in the report is in part as follows: average number of persons employed below ground, 5,772, and the average employed above ground, 2,065; number of certificates of competency as coal miners issued in 1932, 557; third class certificates, 43; second class certificates, 11; first class certificates, 2; provisional certificates (overmen), 178; number of persons prosecuted under Coal Mines Regulation Act, 22; electrical power purchased, 14,875,890 kilowatt hours.

*Accidents.*—During the year, there was a total of 168 accidents, of which 11 were fatal. In addition there was another person killed while illegally mining coal. Accidents below ground totalled 137, and those above ground numbered 31; ten of the fatalities occurred below ground. In 1931 there were 164 accidents, including 16 fatalities.

In 1932 the ratio of accidents per 1,000,000 tons of coal mined was 34.51 and the ratio of accidents per 1,000 men employed was 21.43. The greatest single factor in the cause of accidents was "falls of rock."

The usual accident prevention measures included the analysis of mine air and tests with gas detectors. Also samples of rock dust, used for rock dusting in the bituminous mines, were collected and forwarded to the provincial analyst to be tested for silica content.

The annual report of the Department of Scientific and Industrial Research of Great Britain states that at the request of the Home Office the Department has arranged for an investigation to produce more efficient respirators for use in industrial processes as a protection against the inhalation of dust. This work has led to the production of a new respirator with which very satisfactory results have been obtained in tests in mines, quarries, and silica and asbestos works. Research is also being carried out on the detection of small quantities of toxic gases in the atmosphere and on respirators to prevent the breathing of such gases. This work should result in affording better protection to workers in chemical and other factories.

## CANADIAN CONSTRUCTION ASSOCIATION

### 16th Annual Convention considers "Recovery by Construction"

THE sixteenth annual convention of the Canadian Construction Association was held at Toronto on January 23-25, President C. J. A. Cook, of Montreal, in the chair. The phrase "Recovery by Construction" was selected as the motto for the meeting, the speakers discussing that proposition from various sides.

In his presidential address Mr. Cook said: "Your executive and the representatives on the National Construction Council have for the past year devoted most of their energies to the problem of construction recovery. Their efforts have not been in vain. A program of public works has been promised for this spring, a display of leadership which we have long awaited. The public in general is now realizing the important place the construction industry occupies in our industrial structure. In this program," he continued, "we must insist moreover, that no hampering regulations be enforced that will bring on the industry the stigma of waste and inefficiency. Every means or method that private enterprise would normally employ should be used to the same extent on all government work. We must protect the taxpayer and see that he gets the greatest possible value for every dollar spent. At the same time, we must protect the worker by assuring him of reasonable hours of labour and by adherence to the fair wage schedules. The growing menace of doing work by day labour must be strenuously opposed. One hundred per cent Canadian materials, wherever possible, should be specified."

Mr. Clark Reilly, the general manager, presented his report covering the activities of the organization for the past year. He pointed out that the abnormally small volume of construction work had had a very direct effect on the association's work in the industry, contracting firms having had to cut their expenses to the bone and manufacturing and supply firms having been compelled to retrench in every possible direction. He referred to the participation of the C.C.A. in the formation of the National Construction Council of Canada, commented on the activity of the association's executive and advisory committees, and the efforts of the joint committee with the Royal Architectural Institute. In conclusion he stated: "We stand to-day at the beginning of a new era for the construction industry in Canada. We have two courses open to us, either to drift along in the laissez-faire attitude, waiting for what may come, or to assume

a leadership by considering our special problems thoroughly and then adopt a vigorous policy of united effort to place our industry on a new footing that will anticipate the needs of the future. I have no doubt but that we shall take this latter course, and anticipate by voluntary action, based on careful planning, the changes that are taking place."

The report of the Membership and Finance Committee showed that at the end of 1933 the membership comprised 55 general contractors, 26 trade contractors, 49 manufacturing and supply firms, 14 branch associations and 6 special memberships.

Mr. Tom Moore, president of the Trades and Labour Congress of Canada, addressing the convention, maintained that unemployment must be dealt with as a national and permanent problem and not merely as one of a local and fleeting character. He discussed unemployment insurance in its various aspects, and his conclusion was that for reasons described "organized labour believes that unemployment insurance is practical, and that from a business viewpoint it is sound, and that from the broad human aspect, it is absolutely essential." (The convention's resolution on this subject is given below.)

Addresses were also delivered as follows: "Highways of Recovery", by Mr. Floyd S. Chalmers; "Intelligent Planning for the Future by the Construction Industry of Canada," by Mr. W. D. Black, of Hamilton; "Relations between Government and Business in Canada," by Mr. Francis Hankin, of Montreal; and "Recovery by Construction," by Professor Gilbert E. Jackson, University of Toronto.

Professor Jackson discussed the respective merits of the policies of large spending and of national retrenchment, and emphasized the need for lower interest rates. Mr. Black, in his paper, showed that it was possible to evolve a practical plan for stabilizing construction and eliminating the periods of excessive prosperity and depression.

#### Resolutions Adopted

*Regulation of the Construction Industry.*—Resolved that in view of the fact that national unemployment and depression are derived very largely from depression in the durable goods industry as a group and that the construction industry in turn contributes in a very large proportion to the depression of the durable goods industry, this convention is of the opinion that the creation of a com-

mission to investigate the past and present conditions and to make recommendations for the rehabilitation and future stabilization of the construction industry would be in the public interest.

Further resolved that this association endorses the demonstration of the necessity for such a commission as set forth in the accompanying text of an address, "Construction—The Joint in the Armour of Depression," delivered before the sixteenth annual convention of the Canadian Construction Association by W. D. Black on January 24, 1934. It is suggested that representations covering this resolution be submitted by the association to the Dominion government and that a copy of the resolution be also sent to all members of the Dominion parliament.

*Licensing of Contractors.*—Resolved that a committee be formed immediately to investigate the practicability of the licensing of all contractors and that this committee be instructed to report to the executive with the least possible delay in order that action may be secured.

*Co-operation of Sections.*—Resolved that the resolution passed at the Vancouver convention to the effect that, wherever possible, general and trade contractors should extend business patronage to other member firms of this association, particularly trade contractors and supply houses and manufacturers, be and is hereby reaffirmed.

*Standard form of Tender.*—Resolved that we commend our representatives on the joint committee for the work done by them during the past year, especially in regard to the production of the Standard Form of Tender.

Resolved further that the Standard Form of Tender as submitted by the Joint Committee be accepted in its present form and tried out for a limited period of time, the duration of which is to be left to the discretion of the incoming executive committee.

*Unemployment Insurance.*—Resolved that the executive of this association keep in close touch with and study the problem of unemployment insurance. Resolved further that representations be made to the proper authorities that this association be represented in any investigation or deliberation by the federal government on this subject.

*Research Work.*—Resolved that this association urge the Dominion government to furnish all necessary funds to promote and establish a panel of the National Bureau of Research at Ottawa to advise upon and undertake the standardization and testing of Canadian building materials and appliances, including lumber.

Resolved further that the testing and approval now demanded by the fire underwriter and other associations be done by the National Bureau of Research at Ottawa and not outside Canada as at present.

*Safety Work.*—Resolved that the value of safety work in our industry be recognized and appreciation given to the work of the construction safety organizations and that every effort be made to continue and extend this work.

*Day Labour.*—Resolved that this association strongly recommends that all work to be done under the proposed legislation by the Dominion, provincial and municipal governments, whether as relief measures or not, shall be done by contract and not by day labour.

Resolved further that the respective governing bodies be advised to this effect.

*Restrictive Legislation.*—A special resolution dealing with restrictive legislation preventing co-operation of various branches of industry was presented but referred to the incoming executive for thorough consideration and necessary action.

### Officers for 1934

Officials of the Association for 1934 were elected as follows: President, W. H. Yates, Hamilton; Vice-President, F. G. Rutley, Montreal; Eastern vice-president, W. L. R. Stewart, Sherbrooke, Que.; Western vice-presidents, Col. W. W. Foster, Vancouver, and C. H. Gunn, Winnipeg; Honorary secretary, Geo. Oakley, Toronto; Honorary treasurer, A. K. Purdy, Toronto; Chairman, general contractor's section, John Parkin, Hamilton; Chairman, manufacturing and supply section, A. U. Cote, Toronto, Chairman, membership and finance committee, V. C. Moynes, Toronto.

The American Federation of Labor, in their annual report on employment for 1933, summarize the gains made by labour under the recovery program in the United States as follows:—"Workers have made three important gains in 1933: (1) greater employment: 1,800,000 who were out of work last year-end now have jobs in industry, and 4,600,000 have temporary work under Civil Works Administration, Public Works Administration and Civilian Conservation Corps; (2) shorter hours: average weekly work hours in industry generally are shorter by 4½ hours per week than at the end of 1932; (3) organization: workers are better organized to handle their problems and share in industrial control than they were last year.

## ALBERTA FEDERATION OF LABOUR

### Proceedings of Eighteenth Convention, January, 1934

THE 18th convention of the Alberta Federation of Labour was held at Edmonton on January 8-10, President Fred. J. White occupying the chair. The president said that possibly no convention since the inauguration of the Federation twenty-two years ago had seen the delegates faced with greater problems than now confronted them.

Hon. J. E. Brownlee, Premier of the Province, who was introduced by the President, conveyed to the delegates the good wishes of the government and people of Alberta. There were three important matters about which he desired to speak, one was the monetary question, which he had had some opportunity to study while he was a member of the Mac-Millan Commission. He asked assistance in crystallizing public opinion in support of public ownership and control of the proposed central bank. Dealing with the public works program proposed by the Dominion Government, Mr. Brownlee hoped that this would not be a spasmodic effort but would be extended over at least three years. Referring to the N.R.A., the Premier stressed the need for the revision of the constitution of Canada, so there would be national control in respect to the hours of labour, and other industrial matters.

The president's report reviewed the work of the last session of the Legislature (LABOUR GAZETTE, July, 1933, page 698), and to the presentation of the recommendations submitted to the government by the Federation last year. The main theme of the session, it was reported, was unemployment, and the low prices of farm commodities. Among the acts adopted was one amending the Debt Adjustment Act, extending city residents the same protection of their home property as was formerly given only to residents of the country. The president also presented a report of the recent convention of the Trades and Labour Congress of Canada (LABOUR GAZETTE, October, 1933, page 1000), at which he had represented the Federation, and also a report of the convention of the American Federation of Labour (LABOUR GAZETTE, November, 1933, page 1083).

#### Resolutions Adopted

That the Federal and Provincial governments be asked to undertake an adequate building and public works program to consist of the erection of public buildings, highways, recreation ground, the clearing of brush lands,

the elimination of level crossings on the railroads, etc., all workers on these jobs to be paid union rates of pay.

That the Alberta government abolish the relief slip system and substitute a standard rate per hour, same to be paid in cash.

Protesting against the practice of municipal councils in using persons on direct relief for ordinary maintenance and upkeep work, and asking that such work be paid for at the regular rates.

Amendment of the relief legislation to provide a fund for the purpose of moving a family from one given place to another, provided the head of the family has reasonable assurance of permanency of position in the new locality.

That medical clinics be set up in various localities to provide for proper medical and mental attention to the unemployed and their families.

That the Direct Relief Act be amended to make provision for the renewing of household equipment, commensurate with common household standards.

Asking the provincial and federal governments to assume responsibility for the care of needy tuberculous people by providing them with proper sanatorium accommodation.

Measures to protect persons on relief who have not completed payment for their homes.

An adequate system of unemployment insurance.

Adequate relief for deserted wives and their families and for young married couples who are unemployed.

Protesting against conditions in the work camps as tending to lower the standard of living for Canadian workers; and recommending that workers in such camps be paid union rates of wages and that sanitary conditions be improved.

That the hours of labour for all bus and truck drivers operating under Provincial Licence be limited to a maximum of eight consecutive hours on duty in each 24.

That the government enact the necessary legislation for the creation of a permanent Coal Commission to regulate the coal shipping and to regulate inter-provincial coal trade by forming a co-operative marketing pool.

That the provincial government appoint a commission, including a labour representative, to investigate every aspect of the coal mining industry and formulate a plan for nationalization of the industry.

Amendment of the Mines Act to provide for the weekly payment of wages.

Amendment of the Mothers' Allowances Act to provide for deserted wives and for mothers who have bed-ridden husbands; and that the general scale of allowances provided for in the Act of 1930 be restored.

Legislation limiting the hours of employment to six hours per day and five days per week.

Enactment of provincial legislation making the Industrial Disputes Investigation Act operative in Alberta, to cover every industry.

Amendment of the Town Act to remove the disabilities of persons on relief.

Opposing the "relief kitchen" method of feeding the unemployed, in place of giving them work and wages at union rates; and asking that while such kitchens are operated the unemployed be given three meals a day, with the transportation tickets, and recreational facilities for those at long distances from the kitchen.

Minimum wages for all workers in the province.

That the proposed Central Bank be publicly owned and operated with power to finance governmental undertakings—federal, provincial and municipal—with interest-free credit, to the end that national wealth may be utilized as the basis for monetary issues without the payment of tribute to private interests.

Appointment of a qualified plumbing inspector in connection with the Public Health Department.

That the amount of Old Age Pensions be increased, and the pension age be reduced from 70 to 65 years.

Repeal of Section 98 of the Criminal Code.

Release of all "class war" prisoners.

That the Dominion Government make a drastic reduction in all interest rates, and set a maximum of 1 per cent for all interest on public loans and a maximum of 2 per cent for all interest on dividends, mortgages, etc.

Legislation on Health Insurance on the plan of the Workmen's Compensation Act.

Holidays on Election Days.

Amendment of the Franchise Act to allow the right to vote after 3 months' residence in the province.

A housing scheme for Alberta similar to schemes in Australia.

Appointment of a labour representative on the Utilities Board.

Protesting against any scheme for assisted immigration.

Financial assistance to destitute miners in Drumheller district.

Free school text books up to Grade XII.

Abolition of cadet training in schools.

Provision of meals for under-nourished school children.

Free medical aid and hospital accommodation to relief workers and their families.

A construction work program to relieve unemployment, no sub-contracts to be permitted, the Fair Wage Clause to be observed, and wages to be paid by cheque or in cash.

That as municipalities contribute only one-third of relief costs they should not compel indigents to work out the full cost of relief.

Instructing the executive to combat dual unions.

A sale of fees for projectionists' licences of \$15 for examination; and \$5 and \$3 for renewals.

Amendment of the Coal Miners' Wages Security Act to provide that wages shall be paid in full and to make it illegal for any coal company to satisfy their employees by making part payments of claim, and paying the balance with stock; and that when bonds are put up, they must be bonds which are immediately convertible into cash.

Support by union members of the union label.

That the Federal government impose a tax up to 25 per cent on unearned increments, including interest and dividends, the profits to be paid over to the municipalities concerned.

Legalizing of sweepstakes.

*Workmen's Compensation.*—That the levy of 4 cents a day on workers in the building industry be abolished and the amount charged to the industry; that workmen's earnings be computed by the day instead of over the year; that the minimum payment for compensation be increased from \$10 to \$15; that the 3-day waiting period be abolished, and payment made from the first day of injury; that the monthly payment to a widow be raised from \$35 to \$45; that miners nystagmus or eye-strain be compensable; that rheumatism be included as a risk of coal miners; that the allowances made in respect to children be increased from \$10 to \$15, etc. A resolution to give doctors the power to recommend patients for light work, and that the patient be compensated until completely cured, was referred to the incoming executive for further study.

The election of officers for the ensuing year resulted in the re-appointment of Fred J. White as president and Carl E. Berg as secretary-treasurer.

The next convention will be held at Lethbridge in 1935.

## LEGISLATION PROPOSED TO PROVINCIAL GOVERNMENTS BY ORGANIZED LABOUR

### Ontario Executive of Trades and Labour Congress of Canada

The Ontario Executive Committee of the Trades and Labour Congress of Canada presented its program of requested provincial legislation to the members of the Ontario Cabinet on January 12, 1934. A delegation of forty representatives of affiliated organizations accompanied the Executive Committee, which comprised the following: Chas. H. Ball, Toronto, chairman; Ald. Rod Plant, Ottawa; and Ted Jackson, Toronto. Receiving the delegation were the following members of the Cabinet: Hon. Geo. S. Henry, Premier; Hon. J. M. Robb, Minister of Labour; Hon. W. H. Price, Attorney-General; Hon. Leopold Macaulay, Minister of Highways; Hon. Geo. Challies, Provincial Secretary; Hon. Harry Schofield, Minister without portfolio.

Under the heading of *Unemployment and Unemployment Insurance* the executive urged increased remuneration to single men employed in road construction camps, and a program of building in municipal and provincial undertakings; also a Federal Unemployment Insurance scheme, wholly administered by the Federal Government, was again reiterated. The requests on this subject included the following: extension of financial assistance to municipalities carrying on relief works, and a stipulation that where such assistance is rendered, regulations governing such works shall provide for a six-hour day and a thirty-hour week without reduction in earnings; purchase of departmental supplies during periods of unemployment; clearing of agricultural lands to provide employment; providing for relief of all needy unemployed women on the same basis as men; enactment of legislation in accordance with the convention of the International Labour Organization providing for limitation of working hours; extension of public ownership of all public utilities; abolition of fee-charging employment exchanges and further development of free employment bureaus.

Other legislative requests included:

Enactment of an examining and licensing act for electricians;

Regulations for the greater protection of linemen and others in the electrical industry;

Urging the support of the Legislature to the reduction of the old age pension limit to 65 years, and repeal of the section requiring five years' provincial residence qualifications;

Re-enactment of a Mortgagees and Purchasers Relief Act; and also in cases of un-

employment and underemployment the consolidation and spreading of tax arrears over a period of five years and suspension of penalties for non-payment of taxes;

A check-up on the application of the Parents' Maintenance Act, "particularly at a time when most children are unable to provide for their own families," and also drawing attention to "tightening up" of old age pensions regulations (In this respect, the committee was in accord with any attempt to check abuses, but protested against any regulations "that would turn old age pension into old age pittance");

Appointment of a labour representative on the Old Age Pensions Commission;

Definite action towards giving effect to the conventions of the International Labour Organization coming within the jurisdiction of the province;

Giving effect to the recommendations of the National Research Council respecting the operation of moving picture machines.

Opposing one-man cars on municipally owned street railways;

Raising the property exemption under the Mothers' Allowance Act from \$2,500 to \$5,000, and that the mother with one child be provided for under the Act;

Amendment of the Mechanics Lien Act, giving workmen added protection in collection of wages;

Amendment of the Bankruptcy Act giving wage claims prior consideration;

Enactment of legislation providing for a six-hour day and five-day week of thirty hours;

Increasing the staff of inspectors under Minimum Wage Act, enabling it to function more efficiently;

Fair wages regulations for the protection of work people employed by contractors, government commissions and departments and others on undertakings done by or on behalf of the government;

Amending the Workmen's Compensation Act to include first aid work under the Act, and also greater preventive measure respecting industrial diseases;

Enactment of paint spraying regulations;

Amending the Factory Act to reduce maximum working hours, etc.;

Enactment of legislation prohibiting employment of females and inexperienced males as operators on power cutting machines;

Enactment of a Barber's Licence Act;

Enactment of legislation for regulating and controlling the installation of equipment for power and domestic heating;

Putting into effect provincial plumbing regulations;

Strict enforcement of regulations governing hoisting machinery;

Urging legislation providing for the three-platoon system for fire fighting staffs;

Requesting the abolition of the employment of married women in industry and the government service in cases where the husband is working;

Enactment of legislation providing for sickness and disability insurance;

Additional measures advocated were: removal of slums, labour representation on all commissions, substitution of physical training for military training; uniform building regulations, legalizing of sweepstakes, and bonding of lawyers holding trust funds.

### Confederation of Catholic Workers of Canada

On January 24 a delegation from the Confederation of Catholic Workers of Canada made their annual presentation to the provincial government of their proposals for legislative action at the present session of the Quebec Legislature. They were received by the Hon. L. A. Taschereau, provincial Premier, with the members of his Cabinet.

The delegation referred with approval to the legislation forecast in the Speech from the Throne, which would make labour agreements enforceable at law. This was the first proposal in the list now submitted. It would result, it was claimed, in the fixing of working hours and thus strengthen the Act for the Limiting of Working Hours (LABOUR GAZETTE, July, 1933, page 695); in guaranteeing the workers a reasonable wage; in securing unanimity on wage matters among employers; in giving the state its proper rôle of giving legal force to agreements that have been reached independently by the parties concerned and in creating respect for law.

Other recommendations were as follows:—

Enactment of a law to provide for the compulsory licensing of employers and workers in the printing industry;

Enactment of a Plumbers' Licensing Act similar to the Pipe Fitters' Act passed in 1933 (LABOUR GAZETTE, July, 1933, page 698).

A Fair Wages scale to be inserted in all construction contracts involving expenditure under the Public Assistance Act.

Grant by the provincial government towards the preparation of a text-book on carpentry in the French language.

That employers who avoid payment of minimum wages to female workers by employing boys be compelled to pay the latter equivalent wages.

That the Order of the Minimum Wage Commission governing the boot and shoe industry (LABOUR GAZETTE, September, 1933,

page 916) be amended so that female workers having served six months or more as apprentices shall receive the minimum rate prescribed; and that those classed as temporary employees, even when their employment is for less than a month, shall not form more than half the total number of employees.

That the Minimum Wage Commission itself prosecute those who infringe orders under the Act, the penalties to be from \$100 to \$500, or imprisonment in default.

Support for the proposed law to encourage the return of women to home life.

Amendment to the Companies Act to prohibit the compulsory sale of company shares to employees earnings less than \$25 a week, and that other workers be protected against the loss of their money so invested.

That the recommendations of the Quebec Social Insurance Commission (LABOUR GAZETTE, February, 1933, page 161, etc.) be carried out, commencing with old age pensions, the federal system being adopted pending the carrying out of the scheme recommended by the Commission.

Creation of a provincial economic Council consisting of a guiding committee, with sub-committees representing the main social and economic activities, the council to include specialists chosen by the state from a list of persons nominated by the various groups.

Deletion of the amendments made last year to the Workmen's Compensation Act (LABOUR GAZETTE, July, 1933, page 695) taking away the right of the injured workman to choose his own doctor, and extending the waiting period before compensation is paid; and that the administration of the Act be placed under the Minister of Labour.

Stricter regulation of the dyes used in connection with the manufacture of shoe leather.

That in view of the number of strangers in the province workers be obliged to carry identification cards.

Establishment of a wage scale in connection with contracts made by the Department of Roads.

Compulsory provision of the remedy "Antidox" in connection with the use of white lead in paint.

Establishment of a Superior Council of Labour in the province which would undertake the compilation of a true labour code.

That the Sunday Observance Act be amended so as to remove the privilege allowed to certain nationalities to work on Sunday; and that new inspection offices be opened at Quebec, Montreal and Sherbrooke.

Enactment of a law establishing a minimum scale of wages for workers in the woods.

Establishment of a double shift for firemen in cities of 30,000 population or more.

Extension of the Moratorium law for another year.

Establishment of a three-shift system for watchmen, furnace men and stationary engineers in factories.

Amendment of the Unemployed Aid Act to provide that relief workers shall be entitled to benefits under the Workmen's Compensation Act.

Compulsory automobile insurance.

That municipalities be given the right to own and operate electrical systems.

That the policy of the "return to the land" be maintained and extended (LABOUR GAZETTE, July, 1933, page 695).

### Quebec Executive of Trades and Labour Congress of Canada

Legislative requests of the Trades and Labour Congress of Canada (provincial executive for Quebec) were submitted recently before the Hon. L. A. Taschereau and members of the Provincial Cabinet. Approximately 100 representatives of affiliated organizations in the province supported the memorandum of resolutions which was presented by the following members of the executive: L. A. Beaudry, chairman; G. R. Brunet, P. Lefevre, and J. Cuppello. The delegation was received by the Premier and the following members of the Cabinet: Hon. C. J. Arcand, Minister of Labour; Hon. J. E. Perrault, Minister of Roads; Hon. L. A. David, Provincial Secretary; Hon. J. N. Francoeur, Minister of Public Works; Hon. Adelard Godbout, Minister of Agriculture; Hon. R. F. Stockwell, provincial treasurer; and Hon. Hector Leferté, Minister of Colonization.

With reference to the Workmen's Compensation Act, it was considered that recent amendments "have had the effect of materially curtailing the benefits and privileges accruing to injured workers and their dependents" and because of this the government was requested to repeal the amendments. The government was also asked to include hotel and restaurant employees under the Act; to appoint a workers' representative on the Compensation Commission; and to adopt measures to curtail the deficit of the commission.

Referring to certain recommendations of the Royal Commission on Social Insurance (LABOUR GAZETTE, February, 1933, page 161, and previous issues) it was urged that these recommendations be made effective by the enactment of legislation providing for old age pensions, mothers' allowances, and sickness and disability insurance.

Among the resolutions was one calling for the convocation of an interprovincial conference for the establishing of a uniform work day and work week in all Canadian industries. (Premier Taschereau concurred in this recommendation, and stated that the province of Quebec had been a pioneer in this respect.)

Some discussion also resulted from a resolution urging the imposition of a stricter penalty for violations of the Minimum Wage Act. It was stated that in many cases offenders did not mind paying the fine and continued to exploit women workers. Representations were made that the fine should be greatly increased and if this did not prove a deterrent that a prison term be imposed. Both Premier Taschereau and Hon. C. J. Arcand, were impressed with the arguments advanced and promised remedial action.

Complaints were directed against alleged unhygienic conditions in a number of hotels and restaurants and printing establishments. Protest was also made against alleged working conditions in certain paper mills of the province.

Other recommendations contained in the resolutions were:

Extension of the fair wages regulations to all construction and repair work done by or for any department of the provincial government.

Endorsing the proposals of the National Construction Council in urging the initiation of building programs;

Amendment of the Factory Act, prohibiting the employment of any person for more than forty hours per week;

Amendment of the Weekly Day of Rest Act so as to insure that all persons employed in places of amusement operating seven days a

week shall be entitled to one day's rest of twenty four hours each week;

Regulation of motor vehicle transportation by the Board of Railway Commissioners or similar authority;

Amendment of the regulations governing motion picture operators to provide for more exacting examinations of projectionists;

Enactment of legislation prohibiting use of poisonous ingredients in paint-spraying machines;

Enactment of legislation providing for more adequate protection in passenger and freight elevators;

Establishment of an accident prevention system on construction work.

## "TRADE UNIONS AND THE LAW"

### Bulletins Published by Workers' Educational Association of Ontario

TRADE Unions and the Law is the title of a series of mimeographed bulletins issued by the Workers' Educational Association of Ontario and compiled by Professor F. C. Auld and Mr. J. Finkelman, M.A. of the University of Toronto. Three have appeared so far—the first one dealing generally with the legal position of trade unions, the second giving a historical sketch of the law and outlining the legal responsibilities of trade unions under existing law, while the third gives a comparative analysis of English and Canadian legislation. The usefulness of such a series is undoubted. Trade union law in Canada is uncertain on several points. Except civil and criminal cases arising from picketing, relatively few actions involving trade unions have been brought, but the number has increased in recent years and appears likely to increase still further with the growth in trade unionism and the increasing prices that usually mark an upturn in business.

It should be pointed out that the bulletins do not deal with the law in Quebec or British Columbia where special statutes modify considerably the law in the other provinces as found in the common law and in statutes of the Dominion Parliament.

In the discussion of the rights and liabilities of trade unions in civil actions there appears to be no distinction drawn between a trade union as plaintiff and as defendant. Under English law, a trade union in restraint of trade and not registered under the Trade Union Act, cannot sue for damages or for breach of contract. Neither can such a trade union be sued for breach of contract; but in theory, at least, a trade union, in common with other voluntary associations, has always been liable to be sued for wrong. Until reform in procedure permitted an association to be sued through its representatives, such an action was not practicable. Since only some half dozen Canadian unions are incorporated by statute or registered under the Trade Unions Act, the above statement would seem to apply to almost all Canadian unions, unless the court

holds that it is against the public policy of the Province or of the Dominion to refuse such assistance. That is, apart from a declaration of public policy on the subject, unregistered trade unions in restraint of trade cannot apply to the courts for assistance in furthering their objects, and they are liable to be sued in a representative action for wrong committed by the union, provided they have a trust fund to satisfy the damages. There has been difficulty in applying the rule in some cases since it is necessary to show that the union, or its agents acting within their duties, was responsible for the acts complained of and that those chosen to defend the action properly represent the union. *Local Union No. 1562 of United Mine Workers of America vs. Williams and Rees* was hardly a clear-cut decision on this matter since members of the court appeared to disagree on this point, but the same members agreed in allowing the appeal on other grounds. In Ontario in *Barret v. Harris*, in 1921, which was not a trade union case, the rule was laid down clearly by Justice Middleton and later approved in an action brought against the Hamilton Motion Picture Projectionists' Union (1924-1925). The Quebec case of *Society Brand Clothes Company v. Amalgamated Clothing Workers of America* was decided largely according to Quebec law under which no one can represent another in court, that is, in Quebec, there is no rule permitting a representative action. As to the application of the rule in such a case in another province other factors would have to be considered.

In volume 2 of the series, it might be made clearer that there is a sharp distinction between agreements which a trade union may make with its members, or with others with respect to its property, and a "collective agreement" between an employer and a trade union as to working conditions. A collective agreement is not a legally binding agreement in English law whether the union be registered under the Trade Union Act or not. The Trade Union Act, and its Canadian counter-

part, explicitly stipulate that the "Act shall not affect any agreement between an employer and those employed by him as to such employment." Further, the legal status conferred on a trade union by the Act is a limited one; a union can only sue and be sued with regard to its funds and real estate. Finally, among the agreements which are declared unenforceable by the Trade Union Act are agreements between one trade union and another. English commentators regard this section as prohibiting the enforcement of collective agreements between a union of employers and a trade union of employees, since the definition of a "trade union" covers both kinds of associations and many employers' associations are registered under the Act. In Canada there has been no development under this phase of the Act.

*Young v. Canadian Northern Railway* is cited in the bulletin apparently as evidence that the agreement between the union and the company was not enforceable owing to the lack of legal personality on the part of the union. The Judicial Committee of the Privy Council make no mention of the character of the union at law but considers the contract of employment between the individual, Young, and the company. The appellant contended that his contract with the company embodied the special terms set out in the collective agreement. Lord Russell stated that if the company bound itself to Young to observe the terms of the collective agreement, "there can be no question of the contract being unenforceable for want of mutuality or otherwise. It is simply a contract of employment which embodies special terms. If the conduct of the railway company in applying the provisions of the agreement to the appellant could only be explained by the existence of a contractual obligation to the appellant so to do, it would be not only permissible, but necessary, to hold that

the existence of the contractual obligation had been established. In the circumstances, however, of the present case, their Lordships find themselves unable so to decide." Further, it was held that the agreement "was intended merely to operate as an agreement between a body of employers and a labour organization by which the employers undertake that as regards their workmen, certain rules beneficial to the workmen shall be observed." In English law, a collective agreement is regarded merely as a usage which enters into individual contracts of employment.

The first case to come before the Canadian courts, except in Quebec, for the direct enforcement of a collective agreement was that of *Polakoff v. Winters*, in which the International Ladies' Garment Workers' Union tried to hold the Winters Garment Company to its agreement with the union. Justice Raney of the Ontario High Court held that as the union was in restraint of trade and unregistered, it had no legal personality and could not appear before the court to claim the assistance of the law. The legal character of collective agreements was not considered in this case.

As the authors of the Bulletins of the Workers' Educational Association of Ontario point out, trade union law in Canada is in a confused state. This appears to be partly owing to this branch of law being little known and many cases hinging on points other than the broad issues of trade union law. Again, the restraint of trade doctrine was applied first in *Chase v. Starr* in 1923 and this fact together with the failure of trade unions to register under the Trade Unions Act has revealed the peculiar condition of the law. Picketing cases and suits for damages were familiar to the courts and the unions, but the position of a trade union as plaintiff was revealed first in *Chase v. Starr*

At the annual meeting of the Association of Registered Nurses of the Province of Quebec, the vice-president, Miss M. L. Moag, said that the Association viewed with apprehension the serious lack of employment among the large group of private duty nurses, also the greatly reduced budgets of hospitals and public health nursing associations, and the consequent curtailment of activities, the longer hours on duty and the much reduced salaries of those who, under present circumstances, are called upon to endure greater strain than at any time previously. The fact that public charity,

on which so many are now dependent, does not include medical relief, is a matter of concern to the association. Curtailment of health activities and services to the physically and mentally ill, it was stated, cannot fail to have serious effects. Many nurses and physicians are idle, yet numbers of people are unable to have either medical or nursing attention. It was earnestly hoped that some plan might be devised and put into action by which there might be a better distribution of medical and nursing personnel so that the sick might receive the necessary care at all times.

## CHILD LABOUR PROVISIONS IN UNITED STATES CODES

THE Children's Bureau of the United States Department of Labour recently issued a memorandum summarizing the provisions affecting the employment of juveniles in the President's Re-employment Agreement and the Codes of Fair Competition so far adopted for the industries utilizing juvenile labour.

The provisions which directly affect juveniles, as distinct from all other workers, relate to the minimum age and the conditions of learners. The question of learners presents a serious difficulty from the point of view of child labour. During the depression, certain employers have been in the habit of taking on so-called learners at a pittance, dismissing them at the end of the learning period and replacing them by other learners; such learners are often experienced workers. Attention was called to this practice by the National Child Labour Committee, and provisions to defeat it have been inserted in a number of Codes, largely as a result of the efforts of the Committee. They include a definite restriction of the length of the learning period, a minimum rate of pay for learners, and a limitation of the number of employees who may be learners. The lack of any one of these safeguards leaves a loop-hole through which cheap juvenile labour may be exploited under the guise of learning.

Another important innovation in the Codes is the elimination of the home-work system in the principal garment industries. Child labour is an inevitable accompaniment of industrial homework, and the work is done under such conditions that enforcement of legislation relating to child labour is virtually impossible. Home work is prohibited by the Codes for the following industries: coat and suit, corset and brassiere, hosiery (except under special permit), men's clothing (with a transitional period), underwear and allied products and for many other industries.

### Labour Provisions in Retail Codes

The principal labour provisions of the code governing Retail Trade in the United States, which was recently adopted under the National Industrial Recovery Act, are as follows:

Minimum wages (excluding apprentices and learners) range in the North from \$10 to \$15 per week, according to population, and in the South from \$9 to \$14.

Maximum hours: 40 per week, 8 per day, 6-day week; or 44 per week, 9 per day, 6-day week; or 48 per week, 10 per day, 6-day week; according to store hours.

Provisions for overtime pay; No general provision.  $1\frac{1}{2}$  regular rate after 6 hours per week over maximum, maintenance, etc.

Minors of specified age excluded from employment: Under 16 (except 3 hours per day, 6 days per week, or one 8-hour day for persons 14 and 15).

The Code governing the Retail Drug Trade contains the following labour provisions:—

Minimum wages (excluding apprentices and learners) range in the North from \$10 to \$16 per week, according to population, and in the South from \$9 to \$15.

Maximum hours: 40 per week, 8 per day, 6-day week; or 44 per week, 9 per day, 6-day week; or 48 per week, 10 per day, 6-day week; or 56 per week, 10 per day, 13 days in 2 weeks, according to store hours.

Provisions for overtime pay: No general provision.  $1\frac{1}{2}$  regular rate after 6 hours per week over maximum, maintenance, etc.

Minors of specified age excluded from employment: Under 16 (except 3 hours per day, 6 days per week, or one 8-hour day for persons 14 and 15).

## Work of the Montreal Council of Social Agencies in 1933

The last annual report of the Montreal Council of Social Agencies reviews the activities of the organization during the year 1933. There are four main divisions comprising the organization around which are grouped 52 associate member agencies. According to the outline of its functions in the report "the Council embraces a multitude of interests, often but distantly related. Its services to member agencies include those of social planning and the routine services of a

clearing house and information exchange. It serves the community as an educational and unifying force, interpreting the social problems in its midst, crystallizing and expressing opinion, and influencing specific action."

The chief major activity of the Children's Division in 1933 was the completion of a four year's study on standards in the care of dependent children. The conclusions are to be presented in a final report which will contain recommendations on child care to

serve as a guide and manual for local agencies.

The Dependency and Delinquent Division dealt mainly with the problems of juvenile labour and unemployed and homeless boys. During the year a public meeting was held to discuss juvenile labour conditions in the Province of Quebec. Referring to unemployed boys the report states "that young boys of school age, working at very low wages, are keeping an increasing number of older boys out of work."

In the wider field of employment it is stated that "a comparative study of registrations in government offices of Ontario and Quebec showed a great disparity pointing to the need for expansion of services in this province (Quebec)."

The Education and Recreation Division was closely identified during the year with all local enterprises promoting the constructive use of leisure time for the unemployed.

The Health Division concentrated particularly on the health and medical care of the unemployed. The increasing urgency of this problem and the various services rendered in the case of the needy are outlined in the report of this section.

### Analysis of Unemployment Statistics in Great Britain

In a paper read before the Royal Statistical Society in December, Mr. J. A. Dale, of the Ministry of Labour, analysed the unemployment statistics of Great Britain. Mr. Dale, as reported in the *Economist*, December 30, showed that unemployment is not a permanent state affecting 2,000,000 workers, but an intermittent one affecting 6,000,000, or half the total of all insured workers. Of the 2,000,000 or so who are unemployed at any one time, less than 500,000 have been continuously unemployed for twelve months. Not more than 100,000 can be described as permanently unemployed in the full sense. There are about 1,000,000, however, who are unemployed for nine months in the twelve; and 700,000 who have been employed for less than 30 weeks in the last two years. Mr. Dale's figures show, in fact, that "the dole" even today, is much more of a genuine insurance system than is generally supposed—particularly when it is remembered that the Insurance Fund is now self-supporting. The great majority of the unemployed drawing benefit at any one time have paid at least some contributions during the previous twelve months. Mr. Dale also threw some much needed light on the question

Included in the review of the year's activity is the report of the special committee on unemployment. This Committee came into close contact with such phases of the problem as involved direct relief to homeless men, homeless women, family relief and employment among office workers. A new enterprise that was undertaken during the year was the Unemployed Boys' Farm, organized by the Montreal Boys' Association. Through the co-operation of the Canadian Pacific Railway a farm at Caledonia Springs was secured, and buildings were refitted to accommodate 100 boys. Some stock was obtained and a considerable amount of land put under cultivation. The essential idea underlying this project, it is stated, was to give experience and training to boys in farm life so that they could judge whether they were willing to take up farming as an occupation. Incidentally the boys were removed from the city streets for three months and given the advantage of country life. The Montreal Boys' Association are satisfied with the results of the summer's work as 36 boys secured positions on farms and many others will undoubtedly find employment in the spring. It was hoped that finances would be available to operate this farm again in 1934.

how far the figures of the able-bodied recipients of poor relief should be added to the unemployment figures to secure a true unemployment total. About 1,000,000 able-bodied persons are now in receipt of poor relief. But of these, Mr. Dale showed, a great many are either dependents, or are receiving relief on other grounds than unemployment, or, if able-bodied, are already included in the ordinary unemployment figures. It is clear, therefore, that not all the 1,000,000 must be added to the unemployment figures.

The Weekly Half-Holiday Act Amendment Act, passed by the British Columbia legislature in 1932, extended the power of the Lieutenant-Governor in Council to revoke or alter any appointment of a day to be observed as a half-holiday in shops in organized territory (LABOUR GAZETTE, June, 1932, page 658). By Orders in Council dated January 10, 1934, notices were given that from that date Wednesday in each week was to be observed as a half-holiday by the employees in all the shops at Powell River, Westview District, Cranberry District and Wildwood District, except those shops to which the Weekly Half-Holiday Act does not apply (i.e. bakeries, restaurants, dairies, etc.)

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Proposed Membership of United States

REFERENCE was made in the report of the Seventeenth Session of the International Labour Conference held in Geneva, June 8 to 30, 1933 (LABOUR GAZETTE, August, 1933, page 788), to the attendance thereat of four observers appointed by the United States Government. The report of these observers, as submitted to the U.S. Secretary of Labour, is published in the December issue of the *Monthly Labor Review* (Washington), and contains a strong recommendation in favour of the United States' affiliation with the International Labour Organization, as follows:—

"The United States delegates feel that it was very important to be at this meeting as official observers and to participate in the discussions of the Conference. The delegation would unhesitatingly recommend that the United States affiliate with the International Labour Office so as to be in a position to be in full collaboration with the other 58 countries that comprise this organization.

"The International Labour Conference is of the nature of an international industrial parliament in which the delegates of 58 nations participate, including workers', employers' and government delegates. The work of the International Labour Office, the organization which, so to speak, looks after and prepares the work of the Conference, is not unlike that of the United States Department of Labour or any other labour ministry or department, except that it is staffed by international officials drawn from over 40 different nationalities instead of by national officials.

"The economic and social questions that come before the Conference are interwoven with similar questions in the United States. Social insurance, that has had its place on the statute books in the countries of Europe, South America, and the East, we in the United States are just beginning to consider. We want to know their experience and profit by it, and no better opportunity is afforded along that line than participation in conferences of the International Labour Office. In view of the competition among countries—due to inequalities in wages and hours worked—the attention that will be given by future conferences to such economic questions as the shorter working day and the raising of wages and purchasing power will be of particular interest to the United States, and in our opinion the United States cannot afford to be

in a position of less than full equality in such collaboration.

"That adequate representation is assured for both employers and employees is clear in the Conference machinery, each country being represented by two government delegates, one employer (nominated by the largest employers' association), and one worker (nominated by the national trade union organization). Adherence to draft conventions is, of course, purely voluntary on the part of any country. Furthermore, affiliation with the International Labour Office does not necessarily mean membership in the League of Nations. Several countries are now affiliated with the Labour Office that have no relation with the League of Nations.

"There is no doubt that this international organization has been a very great factor in raising the standards of employment the world over. To quote again the Director's report: In speaking of the treaties ratified by the countries, he said that since the organization of the International Labour Office, there had been 566 ratifications of treaties by the countries affiliated. He pointed out the remarkable progress that had been made in the matter of ratifications in Latin America; Spain was the greatest wonder of all, since 14 more ratifications had come in, bringing them to 30 and making almost 100 per cent ratification.

"We think that it is not too much to say that improved working standards and social legislation could not have had such impetus without the collaboration of the countries in the conferences assembled.

"We feel, too, that in another year the United States will have much to contribute to such a conference. It is important to dispel the thought of at least some members of the Conference who say that nothing can be done because the United States, the largest industrial country in the world, does not do its share in collaboration, and that the legal industrial standards in the United States are far below those of other countries. We strongly recommend, therefore, that the United States Government affiliate with the International Labour Organization at the earliest possible opportunity, and that in the meantime the Government send a delegation to the next conference in May, 1934, having in mind representation upon such delegation of two Government members, an employer spokesman, and a representative of the organized workers."

### United States Members of Standing Committees

On January 24 the United States was represented for the first time on five Standing Committees of the International Labour Organization, taking the places left vacant by German members who had resigned from these committees. The American representatives are as follows:—

Committee of Statistical Experts: Isidor Lubin, commissioner of labour statistics of the Labour Department in Washington.

Industrial Hygiene Committee: Dr. R. R. Sayers, chief of the medical section of the United States Bureau of Mines, and Dr. Leroy

V. Gardner, director of the Saranac Laboratory of the Trudeau Foundation.

Accident Prevention Committee: M. Kjaer of the Labour Department, and Cyrille Ainsworth, assistant secretary of the American Standards Association.

Social Insurance Committee: Verne A. Zimmer, director of the New York Labour Accident Reparation Service; Abraham Epstein, secretary general of the American Association for Social Security, and Dr. Isaac M. Rubinow of New York.

Farm Labour Committee: Dr. Lewis Gray, chief of the division of rural economy of the Department of Agriculture.

### The Course of American Recovery

Mr. Harold Butler, Director of the International Labour Office (League of Nations), Geneva, is the author of an article in the January issue of the *International Labour Review*, published by the International Labour Office, Geneva, on The Course of American Recovery. In his survey of the field of financial, industrial and agricultural problems in the United States, he finds that the remedial measures taken fall into three main groups, which may conveniently be labelled "relief," "recovery" and "reconstruction."

"The relief measures, he says, "include those for meeting the immediate emergency; to re-open the banks, to feed families on the brink of starvation, to give some support to an agricultural population whose hardships were becoming unbearable. The reconstruction measures, at the opposite extreme, aim at a permanent reorganization of finance, industry and agriculture with the object of creating a social and economic structure which is at once more equitable and better calculated to withstand the shocks of business fluctuations in the future. Between these two types of action are the recovery measures proper, having an increase in business activity and employment as their immediate aim.

"It can hardly be disputed that a very substantial measure of achievement has been realized in all three fields. It is futile to ask whether the United States is in sight of complete recovery. Nothing could have brought the country out of the profound depression into which it was plunged in March within view of renewed prosperity in a space of eight months. The right test to apply is to compare the economic and social position of December with that which existed in March. Viewed from this standpoint it is incontrovertible that immense progress has been accomplished. Whether one looks at the num-

ber of persons employed, the care of those still out of work, the volume of production and sales, the farming community, the stability of the banking system or the soundness of the great insurance companies, a marked improvement has taken place as compared with the first months of 1933. Because recovery has in fact taken place to a considerable degree, it is now being said, particularly by those who prophesized the abject failure of the Roosevelt program, that it has occurred in spite of it as a result of the general improvement in business activity which has been observable in most countries in the later months of 1933. Such a view entirely ignores the social and economic circumstances which confronted the President on assuming office. A triple program of relief, recovery and reconstruction was imperatively necessary at that time, and it is impossible to believe that without that program the United States could either have avoided a much greater catastrophe or have achieved the measure of recuperation which has already taken place.

"Of the future no one can make any confident prediction. There are still dark shadows as well as sunlight in the picture. A series of complicated and perplexing problems remain to be solved in every field of economic and financial policy. At the present moment the most urgent question is whether purchasing power can be stimulated so as to enable sales to expand. The administration is bending all its energies to this task by large subsidies for relief, by the public works program, by the program of civil works, by refinancing indebtedness, by putting additional purchasing power into the hands of farmers in the form of benefits and commodity loans, by direct purchases of commodities and by increasing wage rates under the codes. This massive increase in purchasing power has not

yet had time to come into full effect. Only a relatively small proportion of it has so far actually found its way into the hands of potential buyers. Furthermore, such purchasing power as does become available is still necessarily used in large part to pay off debts, and so loses much of its efficacy. The considerable volume of deposits still unavailable in closed banks is a further check upon buying. The low level of investment activity and the sluggish progress of the capital-goods industries are yet other handicaps to business revival.

"In the wider field, also, the problems with which the administration's path is beset are many and serious. There is the cost to Government and the demands upon its credit

which are involved. There is the great question how far the higher labour costs which industry is now carrying will in practice be offset by economies derived from the limitation of competition, or can be covered by higher prices without checking the growth of consumption. Lastly, there is the great problem of the stabilization of the currency. All these and many other problems remain to be solved before the path to prosperity can be finally cleared, but no impartial observer can resist the conclusion that in the course of 1933 considerable strides towards recovery have undoubtedly been made and that the prospects for the new year are incomparably brighter than those with which the United States faced the fateful months of 1933."

### Motor Vehicle Transportation in the United States

The Bureau of Railway Economics, an organization established by the Railways of the United States for the scientific study of transportation problems, has published a report on "An Economic Survey of Motor Vehicle Transportation in the United States" (Special Series, No. 60). The future economic welfare of the country is stated in the report to be dependent upon the finding of a solution of these problems which would provide for a scheme of fair and reasonable government regulation of all transport agencies in the interest of the public.

Motor vehicle and air traffic has shown a rapid and accelerating growth during the past ten years, while other forms of transportation—steam and electric railways, and inland waterways transport—have declined or remained stationary. "The automotive industry reached its peak in 1929, when it employed 447,000 men, and produced a total output valued at more than five billion dollars. Including the tire industry, the totals are increased to 531,000 men, and to more than six billions in products. These totals have declined since 1929, although production in 1933 (first nine months) showed an increase over that of 1932."

The report discusses various aspects of the problem raised by motor competition with the railways, emphasizing the advantage enjoyed by the new transportation through federal, state and municipal assistance for highway construction; the low rates of taxation of motor vehicles as compared with steam railways; the increase of accidents caused by Great Britain, for meeting motor transport problems. As regards Canada, prominence is given to the report of the Royal Commission on Railways and Transportation (the "Duff Commission"), whose report was published in September, 1932, particularly to the following general principles suggested by that Commission for the regulation of all freight and

motor vehicles; and the unequal regulation of railway and highway transportation and the competition between motor transport agencies themselves, this unrestrained competition resulting in confusion in transportation rates.

One section of the report describes the measures adopted in other countries, especially passenger services: (1) Schedules of rates and charges should be published; (2) Within those schedules common carriers of freight should accept and carry what is offered to them without discrimination between customers and commodities; (3) Operators should be insured against all risks, including third party risks; (4) Operators should keep accounts on a prescribed system and render returns to appropriate public authority on a common basis; (5) Minimum standards in regard to working conditions, including wages and hours of labour, should be required; (6) In the interests of the safety of the public, a standard of fitness should be required of all operators in regard to their vehicles; (7) Due regard should be had to the preservation of road surfaces, and, to this end, restrictions should be imposed upon the size and weight of road vehicles in accordance with the type and character of the highway.

Other conclusions of the Duff Commission that are cited in the present report are those recommending the adoption throughout the Dominion of a uniform system of licensing (in addition to the existing licensing for revenue purposes) of road passenger service vehicles and motor vehicles used for the conveyance of freight, whether operated as common carriers, contract carriers, or used exclusively for the conveyance of the freight of their owners, and that the amount of taxation of road motor vehicles, including the tax on gasoline, should reflect a fair proportion (say two-thirds) of the cost of providing and maintaining the highways.

## UNEMPLOYMENT IN CANADA AS REPORTED BY TRADE UNIONS FOR THE YEAR 1933

THE monthly returns on unemployment received by the Department of Labour from local trade unions, indicating their membership and also the number of members unemployed, furnishes a medium in establishing the labour trend among organized workers throughout the country. During the year reviewed there were on an average 1,732 local unions reporting to the Department each month, with a membership average of 150,352 persons, the average of unemployment for the year standing at 22.3 per cent.

Trade conditions in Canada, as a whole, manifested a somewhat brighter outlook during 1933 than those of the previous year, though in the earlier months the situation remained rather depressed. From June 1, however, there were continued advances in employment, this favourable movement extending for the balance of the year, the majority of trades and industries participating in this recovery. The manufacturing industries, which indicated a greater unemployment prevalence in the earlier part of the year when compared with conditions in 1932, showed some pick-up in the latter months, the iron and steel trades, and pulp and paper industries particularly indicating this tendency. In the garment trades, however, employment was in general on a considerably better level than in 1932. In transportation there was some slowing up of activity during the first four months of the year from the same period in 1932, though fluctuations were apparent in the remainder of the year, employment also being slightly retarded in both June and September, while in the other months expansion was noted. Coal mining, which indicated a downward employment tendency during the early spring and summer months when compared with 1932 conditions, showed some revival in the autumn and winter seasons, with the exception of November, when mine closings caused a greater volume of unemployment than in the same month a year ago.

Building and construction, however, was generally quieter throughout the year than in 1932. In lumbering and logging there was considerable unemployment shown in the early part of the year, followed by substantial recovery from May onward. Retail trade was rather brisk in 1933, particularly toward the close of the year and the changes from 1932 were not especially noteworthy. Activity in communication followed closely the general tendency of increased employment in the closing months of the year.

In January no variation was noted in the local trade union situation, as a whole, from the previous month, minor increases and decreases in the various trades and industries being of an offsetting character. The trend of activity during February was, however, slightly better than in January, the manufacturing industries, particularly the iron and steel trades, accounting largely for the change, though coal mining and transportation also afforded a greater employment volume. There was a slight falling off in available work during March from the month preceding, an adverse employment movement being recorded in the coal mining industry due to mine closings in the western areas, and activity for workers in the manufacturing industries was also somewhat retarded from February. At the close of March a period of steadily diminishing unemployment set in which was sustained to the close of September. The level of employment at the end of October remained identical with that of the previous month, the November situation showing a slightly unfavourable tendency, which continued throughout December. The percentage of 19.8 reported in both September and October represented the most favourable employment period for the year 1933, while the maximum of unemployment obtained in January, when 25.5 per cent of idleness was recorded, which latter percentage was also the unemployment peak of 1932.

The Canadian Association of Seamen recently made the following recommendations in the event of further revision of the Canada Shipping Act; (a) that Canadian ships be defined and recognized; (b) that the coasting trade of Canada be reserved to Canadian ships manned by Canadian crews; (c) that

Canadian subsidies be granted only to Canadian ships, repaired, provisioned, and equipped in Canada and manned by Canadian crews; (d) that Canadian shipbuilding be promoted; and (e) that Canadians be encouraged to follow the occupation of seamen by a pension system.

## REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD OCTOBER TO DECEMBER, 1933

THE work of the offices of the Employment Service of Canada during the quarter October to December, 1933, was considerably greater in volume than during the corresponding quarter of 1932, as there was shown an increase of 39 per cent both in vacancies offered and in placements effected. An analysis of the different industries showed that gains were registered in both instances in construction and maintenance, where a great amount of work had been carried on as a relief measure under the Federal and Provincial governments, and in logging, mining and communication. Services recorded a gain in opportunities offered, but a decline in placements. Other groups showing losses under both comparisons were farming, manufacturing, trade and transportation. Provincially, all districts, except the Maritimes and Saskatchewan, showed increased vacancies and placements. The accompanying table gives the vacancies and placements of the Employment Service of Canada by industrial groups in the various provinces during the period October to December, 1933.

From the chart on page .. which accompanies the article on the work of the Employment Service for the month of December, it will be seen that the curves of vacancies and placements in relation to applications declined during the first half of October, but from the middle of that month until the middle of December showed a marked upward trend, again declining during the latter half of December. At the close of the quarter under review the curve of vacancies was 7 points and that of placements nearly 6 points below the level attained at the close of December, 1932, although the ratios for the quarter as a whole had been substantially higher. During

the period October to December, 1933, there was a ratio of 57.6 vacancies and 55.0 placements for each 100 applications for employment, as compared with 48.2 vacancies and 45.9 placements during the corresponding period of 1932.

The average number of positions offered daily during the quarter under review was 1,531, of applications registered 2,656, and of placements effected 1,461, in contrast with a daily average of 1,090 vacancies, 2,261 applications and 1,037 placements in regular and casual employment during the last quarter of 1932.

During the three months October to December, 1933, the office reported that they had made 114,076 references of persons to positions, and had effected a total of 109,531 placements, of which 46,885 were in regular employment and 62,646 in casual work. Of the placements in regular employment, 36,169 were of men and 10,716 of women, while casual work was found for 55,062 men and 7,584 women. Comparison with the same period in 1932 showed that 78,780 placements were then made, of which 38,402 were in regular employment and 40,378 in casual work. Applications for employment during the period under review were received from 163,961 men and 35,202 women, a total of 199,163, in contrast with a registration of 171,778 persons during the same period of 1932. Employers notified the Service during October to December, 1933, of 114,817 vacancies, of which 92,876 were for men and 21,941 for women, as compared with 82,790 opportunities for work during the corresponding period of 1932.

A report in detail of the transactions of the Employment Service for the month of December, 1933, will be found on page 182.

## EMPLOYMENT CONDITIONS IN CANADA AT THE END OF JANUARY, 1934

### Reports of Superintendents of the Employment Service

THE employment situation at the end of January, 1934, was reported by the superintendents of the Employment Service to be as follows:—

Severe storms and continuous sub-zero temperatures in the Maritime Provinces handicapped to a great extent farming, fishing and logging, as the great depth of snow made hauling of logs and firewood very difficult, while fishing in some localities was almost impossible. Mines in the New Glasgow area operated from three to six days per week, while those in Cape Breton and vicinity worked only from two to four days. Bakers and manufacturers of foodstuffs reported business as good, with a few other industries showing full time schedules or an increased output. Sugar refineries, however, were slack. The steel plant at Trenton had also commenced operations, but some departments were operating on only twenty per cent capacity. Other than a large amount of relief work on street clearance and highway maintenance, construction was at a standstill. Transportation was brisk and trade was fair. The usual demand was reported for charwomen and maids in the Women's Division.

Only a few farm placements were effected in the Province of Quebec, but logging showed some improvement. Mining conditions also were favourable. Hull, Sherbrooke and Three Rivers reported factories busy, paper mills being particularly so at the last named place, owing to increased production. At Montreal and Quebec City, however, slackness prevailed, in nearly all industries, the iron and steel group alone showing a revival in activity. Construction was quiet, although there were a few orders listed for building tradesmen where repair work was being carried on. Snow removal provided the chief source of employment throughout the province, the City of Montreal hiring over 5,000 men for this alone. Reports on transportation varied, from fair in Montreal and Three Rivers, to active in Quebec City. Trade was somewhat more satisfactory. In the Women's Division a great number of vacancies was listed, but some were filled at reduced wages and others not at all, while applicants decreased at Montreal, but increased at Three Rivers.

Little demand was reported for farm help in Ontario and where this existed, the pay offered was so low that there was little inducement for single men to leave the various relief camps, where wages were the same and

living conditions and working hours were better. Although logging was in full swing, vacancies consisted almost entirely of replacement of skilled bushmen, of whom there was a scarcity at certain points. Heavy snow falls during the last two months had made operations in the woods difficult, but on the whole, good progress was being made. A strike at some of the camps in the Sudbury zone had also retarded work there, but sawmills had opened and one at Tionaga was running double shift. All producing mines were active, and a steady demand existed for all classes of miners and mill men, several placements being made of higher skilled workers. The past improvement noted in manufacturing industries appeared well sustained, with former hands being re-engaged. Automobile and agricultural implement factories, cordage and textiles, rubber companies and breweries were busy, but electrical and building supplies remained slow. Building construction was quiet and relief work provided by Federal and provincial governments provided the chief means of employment, this consisting mainly of sewer and highway construction and maintenance and snow shovelling. Transportation was fairly good, all railroads running out of St. Thomas being busy and men in the traffic department there making good time, while at Stratford a notable increase was shown over the business done locally during the corresponding period a year ago. Trade was fair. Requests for domestics in the Women's Division remained steady, but wages were low.

The call for farm hands in the Prairie Provinces was less than formerly, with a number of vacancies remaining unfilled, as experienced men were hard to procure. Edmonton and Yorkton reported logging conditions good, with a number of orders coming in. Mining was only fair. Manufacturing was inactive. There was little private work being undertaken in building construction and relief undertakings provided the chief source of work available. The volume of activity in the Women's Division showed little change, although the distribution of placements was distinctly different, the demand for day workers being less, but the number of domestics sent to country positions much greater.

Farming was quiet in British Columbia, although some men were employed by fruit growers doing orchard work and others packing fruit for shipment. It was reported that snow storms were hampering logging operations in the Upper Island districts, but export

business was active. Mining was quiet, also fishing, except for reduction plants on the West coast, which were fairly busy. Building construction was very slack, relief camps continuing to be the only outlet for common labour. At Kamloops, railroaders had more work owing to heavy shipments of wheat,

although these were below those of the previous year. Shipping and longshore work was active at New Westminster and Victoria, but quieter at Vancouver. Trade was dull, with collections slow. Less work was available in the Women's Division, and a number of persons were registered for relief.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN DECEMBER, 1933

THE following information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on January 1 was 8,460, the employees on their payrolls numbering 821,131 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for December was 1,726 having an aggregate

membership of 146,770 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

### (1) Employment Situation at the Beginning of January, 1934, as Reported by Employers

The twelve-year record of employment maintained in the Dominion Bureau of Statistics shows that activity has invariably declined at the beginning of January, the firms furnishing data having laid off some 59,900 workers, on the average, between December 1 and January 1 in the years 1921-33. The customary contraction took place at the opening of the present year, but was very decidedly smaller than usual, the workers released from the staffs of the 8,460 co-operating employers numbering 30,387, or slightly more than half of the average for the last twelve years. This decline, besides being substantially below the average, was also the smallest on record for midwinter; the January 1 losses reported in preceding years ranged from 42,253 at the beginning of 1933, to 72,055 on January 1, 1922.

The firms making returns for the date under review employed 821,131 workers, compared with 851,518 in the preceding month. The index (average 1926=100) stood at 88·6,

compared with 91·8 on December 1 and 78·5 on January 1, 1933; after adjustment for seasonal movement, however, the January 1, 1934, index was 95·0, a gain of 4·1 points over the corrected figure for December 1, 1933. The crude index for the same date in the preceding twelve years was as follows: 1932, 91·6; 1931, 101·7; 1930, 111·2; 1929, 109·1; 1928, 100·7; 1927, 95·9; 1926, 90·7; 1925, 84·9; 1924, 89·8; 1923, 87·3; 1922, 78·8; and 1921, 88·8.

As is customary at the time of year, the contractions in many instances were due to shutdowns for inventory and over the holiday season, with the anticipation of an early resumption of activity. The experience of the last twelve years shows that usually (though not invariably) there is on February 1 a partial recovery from the losses recorded at the beginning of January.

The greatest curtailment on the date under review was in manufacturing, in which the indicated reduction accounted for over 72 per

cent of the general decrease noted on January 1. The contraction in factory employment on that date in other years of the record has always been succeeded by a revival at the beginning of February, although in no year has the recovery equalled the decline in the preceding month. The recession on January 1, 1934, was less than average, being in fact the smallest noted in the thirteen years for which statistics are now available. Within the manufacturing group, the largest losses occurred in food, textile, lumber and metal factories. Among the non-manufacturing industries, there were pronounced seasonal

*Maritime Provinces.*—There was a further increase in employment in the Maritime Provinces on January 1; this occurred chiefly in coal-mining, transportation and railway construction, while manufacturing, building and highway construction and trade were slacker. The changes, both gains and losses, were largely seasonal in character. Statements were received from 611 firms employing 68,261 persons, compared with 65,622 at the beginning of December. Substantial declines had been noted on January 1, 1933, when the index was some 17 points lower. The improvement on the date under review resulted in a more

#### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

**NOTE.**—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

decreases in building and highway construction, transportation and wholesale trade. On the other hand, logging, coal-mining, railway construction, services and retail trade reported decided improvement, in some cases also of a seasonal nature.

#### Employment by Economic Areas

All provinces except the Maritimes recorded reduced activity; as is customary at the time of year, firms in Quebec and Ontario laid off the greatest number of workers, mainly owing to the predominance of manufacturing in their industrial distribution. The percentage declines in Quebec and British Columbia were largest.

favourable situation being reported in the Maritime Provinces than at any other date since February 1, 1932.

*Quebec.*—The reduction in Quebec was larger than that indicated on the same date last year, but employment was then in decidedly smaller volume. Manufacturing (notably in iron and steel, pulp and paper, textile, food, leather and lumber plants), construction and transportation reported the most pronounced losses, but the tendency was also downward in wholesale trade, mining and communications. On the other hand, considerable improvement took place in logging, retail trade and services and in beverage and tobacco factories. In many cases, operations

will have been resumed early in the New Year in the establishments closed down over the holiday season and for purposes of inventory. The labour forces of the 2,034 co-operating employers aggregated 233,855 workers, as against 250,510 on December 1, 1933.

*Ontario.*—Manufacturing showed the greatest curtailment in Ontario, that in iron and steel, food, textile, lumber and leather factories being most noteworthy, although there were also important losses in non-ferrous metals, pulp and paper, rubber and some other groups. In the non-manufacturing industries, there were large contractions in transportation, building and railway construction and wholesale trade. Highway construction, retail trade, logging and tobacco and beverage factories, on the other hand, recorded increased activity; that in road work was largely on unemployment relief projects, although the heavy snow falls also provided employment in the ordinary way for considerable staffs in clearing the streets and highways. A combined payroll of

344,863 persons was employed by the 3,745 firms whose returns were received, and who had 353,170 employees on December 1. This contraction involved the release of less than half as many persons as were laid off by the firms reporting for January 1, 1933. The index then was decidedly lower, standing at 78.8, as compared with 91.2 on the date under review.

*Prairie Provinces.*—Declines on a larger scale than at the beginning of January, 1933, were noted in the Prairie Provinces. Statistics were tabulated from 1,230 employers of 108,062 workers, or 3,747 fewer than on December 1. Construction reported the most marked losses, but manufacturing and transportation also showed important curtailment, and communications were slacker. On the other hand, improvement occurred in logging, mining and retail trade. Although the decline on the date under review, as already stated, exceeded that noted on the same date in the preceding year, the firms then furnishing data reported a lower level of employment. The index on January 1, 1934, was 86.4, as compared with 84.4 on the same date in 1933.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS  
(AVERAGE CALENDAR YEAR 1926=100)

Relative Weight of Employment by Economic Areas as at Jan. 1, 1934.....	100.0	8.3	28.5	42.0	13.2	8.0

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada by the firms making returns for the date under review.

*British Columbia.*—The recession in British Columbia involved a rather larger number of workers than that indicated on January 1 of last year, when the index, at 69·7, was many points lower than that of 80·4 at the date under review. The 840 firms furnishing data reported 66,090 employees on January 1, 1934, as against 70,407 in the preceding month. Lumber, animal and vegetable food, iron and steel and non-ferrous metal factories, logging, transportation and trade recorded curtailment, that in the manufacturing industries as a whole being most pronounced. On the other hand, highway and railway construction and services showed improvement.

Index numbers of employment by economic areas are given in Table I.

### Employment by Cities

There were contractions in seven of the eight cities for which separate tabulations are made, firms in Montreal, Quebec, Toronto, Hamilton, Windsor and the adjacent Border Cities, Winnipeg and Vancouver reporting reduced

employment, while very little general change was indicated in Ottawa.

*Montreal.*—The reduction in Montreal involved a smaller number of workers than the decline registered on January 1, 1933, when the index was fractionally lower. Statements were received from 1,150 establishments with 114,958 employees, as compared with 124,413 in the preceding month. Important curtailment was shown in transportation, construction and manufacturing, especially in food, textile, leather and iron and steel plants. On the other hand, tobacco and beverage factories and retail trade were busier.

*Quebec.*—Transportation reported a considerable seasonal loss, and manufacturing and construction also afforded less employment, while services showed some improvement; the 153 co-operating employers in Quebec City reduced their staffs from 11,707 persons on December 1, to 10,891 at the beginning of January. This decline was much larger than that indicated on January 1 last year, when the index was higher.

TABLE II.—INDEX NUMBERS OF EMPLOYMENT BY PRINCIPAL CITIES  
(AVERAGE CALENDAR YEAR 1926=100)

	Montreal	Quebec	Toronto	Ottawa	Hamilton	Windsor	Winnipeg	Vancouver

Jan. 1, 1934.....	78.0	86.5	90.0	95.8	77.1	76.5	81.1	82.2
Relative Weight of Employment by Cities as at Jan. 1, 1934.....	14.0	1.3	13.1	1.5	3.0	1.2	4.2	3.1

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated city to the total number of all employees reported in Canada by the firms making returns for the date under review.

*Toronto.*—Toronto firms showed a decidedly smaller seasonal contraction than on January 1, 1933, employment generally being in greater volume. The index, at 90.0, compared favourably with that of 86.5 at the opening of last year. There were losses in manufacturing, the most noteworthy being in the textile, metal, lumber and food groups; construction, transportation, services and wholesale trade were also slacker, while retail stores reported substantial improvement. Returns were tabulated from 1,244 employers with 107,934 workers, compared with 110,437 in their last report.

*Ottawa.*—Manufacturing registered seasonal curtailment, but trade, construction and transportation were rather more active, the gains in the last two being due in part to the removal of snow. The result was a slight gain in general employment, according to the 164 reporting establishments, whose staffs aggregated 12,159 persons. A considerable reduction had been recorded on the same

date last year, when the index was ten points lower.

*Hamilton.*—Data were received from 256 firms in Hamilton employing 24,363 workers, as against 25,281 on December 1. Manufacturing and transportation showed reduced activity, while road and street work and services reported moderate improvement. The declines noted on January 1, 1933, involved the release of about twice as many workers, and the index was then lower.

*Windsor and the adjacent Border Cities.*—There was a falling-off in the number employed in the Border Cities on January 1, 1934, this taking place chiefly in manufacturing. Returns were compiled from 149 establishments with 10,059 persons in their employ, as compared with 10,264 in the preceding month. Activity was greater than on January 1, 1933, when little change in the general situation had occurred.

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES  
(AVERAGE CALENDAR YEAR 1926=100)

—	All industries	Manufacturing	Logging	Mining	Communications	Transportation	Construction	Services	Trade

Dec. 1.....	91.8	84.4	166.5	105.5	81.0	79.8	94.6	108.8	119.1
Jan. 1, 1934.....	88.6	80.0	168.8	106.8	78.4	76.3	88.1	109.8	122.3
Relative Weight of Employment by Industries as at Jan. 1, 1934.....	100.0	48.6	5.7	5.9	2.5	10.9	12.5	2.8	11.1

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada by the firms making returns for the date under review.

**Winnipeg.**—Employment in manufacturing, communications and construction declined in Winnipeg, while retail trade showed a slight improvement. The 403 co-operating firms reported 34,342 employees, compared with 35,292 in the preceding month. This reduction involved rather more workers than that recorded on January 1, 1933; employment was then in practically the same volume.

**Vancouver.**—Further and larger contractions in industrial activity took place in Vancouver, according to returns from 358 employers of 25,635 persons, as compared with 26,582 on December 1. A rather greater decrease had been indicated on the same date last year, when the index was fractionally higher. There were losses in manufacturing, building and retail trade on January 1, 1934, as compared with the preceding month, while services and transportation were somewhat more active.

Index numbers by cities are given in Table II.

### Manufacturing Industries

As already stated, the recession in employment in manufacturing was considerably less than the average indicated in the last twelve years, involving the release of 21,949 operatives from the staffs of the co-operating establishments, as compared with an average loss of 33,280 in the period, 1921-1933. The reduction in manufacturing on January 1, 1934, like that in the total for all industries, was the smallest on record; the falling-off of 23,851 reported on January 1, 1926, was the previous low figure in this comparison, while the greatest losses yet recorded by the employers furnishing statistics were those of 47,751 and 47,209 on January 1, 1921 and 1922, respectively. The contraction on the date under

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

<sup>1</sup>The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review. <sup>2</sup>Revised.

review, as in other years, was partly due to shutdowns for inventory and over the holiday season. In each of the twelve years for which data are now available, employment has shown partial recovery in succeeding weeks; on the average, this has amounted, up to the date of the next report, viz., February 1, to rather better than 52 per cent of the decline noted at the beginning of the year.

The manufacturers making returns for January 1, 1934, numbered 5,105, and their payrolls aggregated 398,685, compared with 420,634 on December 1. The index declined from 84.4 in the preceding month, to 80.0 on the date under review, and as compared with 74.4 on January 1, 1933, shows an improvement of 5.6 points. After adjustment for seasonal influences, the index on the latest date was 87.1, or 1.7 points higher than on December 1. The most extensive reductions on the date under review were in food, textile, lumber, iron and steel, leather and pulp and paper, but the fur, musical instrument, rubber, chemical, clay, glass and stone, electrical apparatus, non-ferrous metal and miscellaneous manufacturing industries also recorded important curtailment. In many cases, the declines were smaller than those noted on January 1, 1933, notably in the lumber, pulp and paper, rubber, textile and iron and steel groups. Food factories, however, reported reductions on a much greater scale than at the beginning of last year. The analysis by industries shows decided improvement in the tobacco and beverage and non-metallic mineral plants as compared with the preceding month, the first time on record that activity in these groups has been higher on January 1 than on December 1.

*Animal Products—Edible.*—Large reductions were reported in this division, in which all branches showed curtailment, that in fish-preserving plants being most extensive. Statements were received from 223 manufacturers with 17,285 workers, as compared with 18,457 at the beginning of December. This loss was much greater than that recorded on January 1, 1933, when the index number was nearly three points lower. All provinces reported reduced employment, the heaviest contractions being in British Columbia.

*Leather Products.*—There was a seasonal decline in the leather industries at the beginning of January, particularly in boot and shoe factories. The shrinkage involved a smaller number of employees than that noted on the corresponding date last year, when the index was slightly lower. A combined working force of 16,066 persons was registered by the 262 firms making returns, as compared with 17,636 in the preceding month. The greatest losses occurred in Ontario, but those in Quebec were also severe.

*Lumber Products.*—Seasonal contractions on a smaller scale than on January 1, 1933, were noted in lumber mills, 783 of which reduced their payrolls from 30,919 on December 1 to 27,578 workers at the beginning of January. Employment was in decidedly better volume than at the corresponding date of last year. Sawmills registered the most pronounced decreases, but there was also curtailment in furniture, match, container and other wood-using industries. There were especially marked reductions in Ontario and British Columbia, although employment generally declined.

*Musical Instruments.*—Thirty-six manufacturers of musical instruments released 157 persons from their staffs, bringing them to 1,128 at the beginning of January. Practically all the decrease took place in Ontario. A larger recession had been noted on January 1 a year ago, and the index number was then very much lower.

*Plant Products, Edible.*—There were seasonal reductions in employment in practically all branches of the vegetable food group, the greatest being in sugar and syrup, canning, bakery, chocolate and confectionery factories. The working forces of the 411 co-operating employers totalled 24,408 persons, as compared with 29,424 in their last report. The contractions in Ontario were most pronounced, although the movement was generally unfavourable. The declines noted at the beginning of January last year were decidedly smaller, and the index number then was a few points higher than at the date under review.

*Pulp and Paper Products.*—The shrinkage at the beginning of January, 1934, was substantially less than that noted on the same date in 1933, when employment was in rather smaller volume. Statistics were received from 570 firms, whose staffs aggregated 51,648 workers, or 1,507 fewer than in their last report. There were considerable losses in the Eastern and Central Provinces. Pulp and paper mills reported a large share of the reduction, but there were also declines in plants producing paper goods and in printing and publishing establishments.

*Rubber Products.*—Rubber factories showed a decrease, which, however, was considerably less than that of January 1, 1933; 49 plants had 10,855 employees on the date under review, as against 11,440 at the beginning of December. The largest losses took place in Ontario. The index number, at 85.2, was between nine and ten points higher than in the same month of last year, when it had stood at 75.6.

*Textile Products.*—The 869 textile firms furnishing data released a smaller proportion of their total operatives than was the case among the establishments reporting at the beginning of January, 1933; the index then was over nine points lower than on the date under review, when it stood at 97.5. The reported payrolls included 82,523 persons on January 1, 1934, as against 87,501 in the last report. Ontario recorded the bulk of the shrinkage, which was especially marked in the hosiery and knit goods and garment and personal furnishing divisions.

*Tobacco, Distilled and Malt Liquors.*—There was an improvement in employment at the beginning of January in the tobacco and beverage groups, comparing favourably with the decline that has usually been recorded between December and January in other years for which statistics are available. Statements were tabulated from 160 manufacturers in this group, employing 16,263 workers, or 847 more than on December 1. Practically all the gain took place in Quebec and Ontario.

*Chemical Products.*—Employment in chemical and allied product plants showed a contraction on January 1 as compared with the preceding month, 213 persons having been released from the labour forces of the 165 reporting establishments, which had 8,509 employees. Greater declines were noted on the corresponding date a year ago, when the index number was many points lower.

*Clay, Glass and Stone Products.*—Further seasonal recessions in employment occurred in the production of these goods; 180 works reported an aggregate staff of 5,807, as compared with 6,266 in the preceding month. All provinces shared in this curtailment, which, however, was most marked in Quebec and Ontario. Brick and stone plants recorded important declines; but these were slightly smaller than those of January 1, 1933, when employment was generally in smaller volume.

*Electric Current.*—Practically no change on the whole occurred in electric current plants, according to statistics from 95 producers, employing 13,220 workers, or 28 more than on December 1. Quebec reported improvement, but there was a falling-off elsewhere. A reduction had been noted at the beginning of January last year, when the index was three to four points higher.

*Electrical Apparatus.*—A decline in personnel was registered by the 102 co-operating electrical apparatus factories, whose labour forces aggregated 10,371 persons on January 1, as compared with 10,567 in the preceding month. Employment was in slightly less volume than on the

same date of 1933, although a very much larger reduction had then been noted.

*Iron and Steel Products.*—Crude, rolled and forged, heating appliance, general plant machinery, iron pipe, wire, sheet metal, and some other iron and steel works reported considerable curtailment, while improvement was shown in agricultural implement and land vehicle factories. The payrolls of the 789 firms furnishing data in the iron and steel group totalled 79,758, against 82,517 employees on December 1. This contraction (which occurred chiefly in Quebec and Ontario) was on a decidedly smaller scale than that noted on the corresponding date of last year, when the index was several points lower.

*Non-Ferrous Metal Products.*—The loss recorded in non-ferrous metal products involved a smaller number of workers than that indicated on the same date in 1933, when the index was many points lower. Returns were compiled from 147 employers of 14,295 persons, as compared with 14,795 at the commencement of December. The most noteworthy reductions were in Ontario. An analysis of the data by industries shows that the smelting and refining, precious metal and lead, tin, zinc and copper plants released most of the workers who were laid off.

*Mineral Products.*—Increased activity was noted in this group, comparing favourably with the shrinkage registered at the beginning of last year. A combined working force of 12,799 persons was employed by the 115 establishments whose returns were received, and who had 12,657 employees on December 1. The index was higher than on January 1, 1933.

### Logging

Logging showed a further but smaller increase on January 1, when employment was decidedly more active than in any other month since early in 1930. The index stood at 168.8 compared with 166.5 in December, 1933, and 74.5 on January 1, 1933. A combined working force of 46,922 men was reported by the 284 co-operating firms, who had 45,965 employees in the preceding month. Improvement was shown in all areas except British Columbia.

### Mining

*Coal.*—There was a substantial increase in coal mines, 100 of which enlarged their payrolls from 23,905 persons on December 1, to 25,058 at the beginning of January. There were gains in both eastern and western coal fields. The index number on January 1, 1933, was a point lower; employment had then shown a reduction from the preceding month.

**Metallic Ores.**—A moderate decrease was noted in metallic ore mines, according to data from 84 firms who employed 18,758 persons at the beginning of January, as compared with 18,908 in the last report. The index was decidedly higher than at the same date last year, when greater losses had occurred.

**Non-metallic Minerals (Other than Coal).**—The trend of employment in this division continued seasonally downward; the reductions were on a larger scale than on January 1 a year ago, but the index was then many points lower. Statements were received from 75 firms employing 4,960 workers, as compared with 5,457 in the preceding month. The Maritime Provinces and Quebec recorded the greatest shrinkage.

### Communications

Further losses were reported in telephones and telegraphs; the situation compared unfavourably with that indicated on the same date in 1933, when decreases were also noted. The payrolls of the companies and branches furnishing data declined from 21,329 on December 1 to 20,644 employees at the beginning of January.

### Transportation

**Street Railways and Cartage.**—Employment in local transportation showed a further seasonal contraction, involving fewer workers than that reported on January 1, 1933; the index number then, however, was over four points higher. A combined staff of 23,666 persons was employed by the 183 co-operating firms, who had 23,901 employees in the preceding month. There were reductions in Ontario and the Western Provinces.

**Steam Railways.**—Steam railway operation showed little general change, improvement in the Maritime Provinces being offset by contractions elsewhere. The payrolls of the 101 companies and divisional superintendents furnishing returns aggregated 55,551 persons, as against 55,598 in their last report. A considerable decline, on the whole, had been recorded on the same date last year, but the index was then higher.

**Shipping and Stevedoring.**—There was a large seasonal reduction in employment in water transportation, chiefly in Quebec and Ontario, while an increase, also seasonal in character, was noted in the Maritime Provinces. A much larger number of workers was let out than on January 1, 1933, when the index was a point higher. Returns for the date under review were compiled from 92 employers of 10,441 men, compared with 14,380 in the preceding month.

### Construction and Maintenance

**Building.**—Continued seasonal curtailment of operations was shown in building construc-

tion; 633 contractors reduced their staffs from 17,089 at the beginning of December to 13,590 on January 1. The most pronounced declines were in Quebec and Ontario, although there were losses in all five economic areas. Rather smaller decreases had been indicated on January 1 last year, when the index was some four points lower.

**Highway.**—Statements were received from 347 firms employing 65,356 workers, or 5,803 fewer than on December 1. Important losses occurred in the Maritime and Prairie Provinces and Quebec, while Ontario and British Columbia showed improvement. Road construction was generally maintained in decidedly greater volume than in the winter of 1932-1933, mainly owing to an increase in the unemployment relief projects being carried on during the present winter.

**Railway.**—An upward movement was shown in this division, in which 36 employers reported 23,735 persons on their payrolls, as compared with 22,130 in the preceding month; the gain was chiefly due to snow clearing operations following severe storms. The index was higher than on January 1 of a year ago, large declines having then been noted. Ontario and the Prairie Provinces recorded decreases on the date under review, while increased employment was indicated in the Maritime Provinces, Quebec and British Columbia.

### Services

Heightened activity was registered in the service group, in which 398 firms employed 22,685 persons, or 189 more than in the preceding month. The increase reported was chiefly in hotels and restaurants. Decreases had taken place at the beginning of January, 1933, when the index was lower.

### Trade

Retail trade afforded substantially more employment than on December 1, but large losses occurred in wholesale houses; there was, however, a considerable advance in the group as a whole, the gain being the greatest indicated on January 1 in the years since 1921. The 940 co-operating trading establishments had 91,080 workers, compared with 88,567 in their last report. Employment was at a rather higher level than on January 1, 1933, although the general tendency was then also upward.

### Tables

The accompanying tables give index numbers of employment by economic areas, leading cities and industries. The columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on the date indicated.

## (2) Unemployment in Trade Unions at the Close of December, 1933

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work outside their own trades, or who are idle owing to illness, are not considered as unemployed. Unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

a noteworthy gain from the previous month. Activity in British Columbia also improved slightly, while in Manitoba there was little change from November, though the tendency was toward a greater employment volume. On the other hand, Alberta and Ontario members suffered losses in available work of moderate proportions, shut-downs in the garment trades and retarded activity in the coal mines of the former province contributing largely to the decline, while in Ontario the recessions were of more general distribution throughout the various trades and industries. A downward employment trend from

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

The situation existing among local trade unions at the close of December, as manifest by returns received from 1,726 labour organizations with a combined membership of 146,770 persons, was slightly less favourable than in the preceding month, 30,799, or 21.0 per cent, of the members being reported idle, in contrast with an unemployment percentage of 20.4 in November. Prevailing conditions, however, were considerably better than in December, 1932, when 25.5 per cent of the members reported were without work. Due to mine re-openings in Nova Scotia during December employment in that province showed

the previous month, was also noted in Saskatchewan, though the variation was slight, and in New Brunswick and Quebec the recessions indicated were less than 1 per cent. All provinces, with the exception of Nova Scotia, reflected a better employment volume afforded than in December, 1932, Quebec, with gains of over 7 per cent, showing the greatest expansion. Responsibility for this favourable movement in Quebec rested largely with the manufacturing industries, particularly the garment trades, which reported a much higher level of activity than in December a year ago, although employment generally throughout this prov-

ince appeared to be on a larger scale. British Columbia, Alberta and New Brunswick members also showed noteworthy improvement in conditions from December, 1932, the majority of trades participating in varying measures in the total advancement except in British Columbia where the bulk of the gain occurred in manufacturing. Increased activity of more moderate degree was reflected by Ontario and

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada

Dec. 1933.....	11.2	11.8	23.2	24.9	20.3	17.2	17.6	19.8	21.0

Saskatchewan unions, while in Manitoba the gains recorded were of minor importance. The curtailment evident in Nova Scotia was not particularly noteworthy, the coal mining and manufacturing industries chiefly accounting for this less favourable trend.

A separate table is compiled monthly of unemployment in the largest city in each province, with the exception of Prince Edward Island. Activity for Halifax members was substantially greater during December than in the preceding month, and in Montreal conditions improved slightly. Winnipeg and Regina unions maintained an almost unchanged employment volume from November, the tendency, however, being favourable. Edmonton unions, on the contrary, indicated a sharp drop in work available and in Toronto and Saint John, contractions on a more moderate scale occurred. Vancouver unions also reported a slight decline in work afforded. In Winnipeg the percentage of idleness during the month under review was identical with that of December, 1932, while in all other cities a more favourable employment volume was available, Vancouver, Montreal and Saint John unions particularly showing substantial employment recovery, though in the remaining cities the improvement recorded was noteworthy.

Accompanying this article is a chart which shows the trend of unemployment by months, from January, 1927, to date. At the close of January, 1933, the curve rested at exactly the same level as on the last day of 1932, fluctuations reflected in the various trades and industries offsetting each other. The projection of the curve in February was slightly downward from January, indicative of an increased employment volume, the March tendency being less favourable than in February, though the change was quite slight. From the close of March, however, the curve mapped a steadily downward course, until the end of September, showing continued employment advances. October conditions, as seen from the curve, were identical with those of September, the level remaining the same in both months, unemployment standing at 19.8 per cent, and representing the most favourable employment period for the year. In November, the trend was toward a reduction in activity, though the variation from the previous month was slight, this less favourable employment movement continuing to the close of December. The greatest percentage of unemployment to be recorded during the year was in January, when 25.5 per cent of the members reported were idle.

Reflecting in part, seasonal dullness, combined with the closing for holiday and in-

ventory purposes which followed the holiday period in many lines of business, activity in the manufacturing industries showed some curtailment during December from the previous month, according to the reports compiled from 461 unions, with a total of 41,905 members, of these 9,815 were without work on the last day of the month, a percentage of 23.4, contrasted with 20.5 per cent of unemployment in November. Some recovery was noted, however, from December, 1932, conditions, when unemployment stood at 28.9 per cent. Cigar makers, metal polishers and general labourers reported large increases in slackness from November, the recessions among the first two groups of workers involving few members. In the majority of trades, however, employment tended downward, the garment, textile, printing and iron and steel trades, paper makers and fur, brewery and glass workers all reflecting some curtailment of activity. Among wood and leather workers and bakers and confectioners, however a more favourable employment tendency was noted, though the changes were quite slight. When a comparison is made with the returns in the manufacturing industries for December, 1932, the garment trades reflected a decidedly better situation during the month reviewed, as did also wood, hat and cap, glass workers and metal polishers. The iron and steel trades, while showing a much smaller percentage gain than those previously noted, still influenced the situation perceptibly, as their membership was quite substantial. Among paper makers a considerable better volume of work was afforded than in December, 1932, bakers and confectioners, printing tradesmen and textile workers showing slight gains only. On the other hand, leather workers, cigar workers and general labourers reported marked curtailment of activity from December a year ago and declines in employment of much lesser magnitude occurred for fur, jewellery and brewery workers.

Coal mining, on the whole, employed larger working forces during December than in the preceding month, several mines in Nova Scotia which had been reported closed in November re-opening during December and accounting in large measure for the change, though in British Columbia also there were noteworthy gains in activity. The situation in Alberta, however, was somewhat less favourable than in November. Reports for December were tabulated from 50 unions of coal miners with a total of 13,648 members, 923 or 6.8 per cent of whom were idle at the end of the month, in contrast with a

percentage of 12.7 in November. Compared with the returns in December a year ago, when 8.3 per cent of unemployment was reported among the miners, Alberta and British Columbia unions were afforded a considerably better employment volume during the month under review, while the tendency in Nova Scotia was toward lessened activity, although the change was slight. In addition to the members reported as entirely out of work a number of miners continued to work only a few days a week.

The building and construction trades during December continued in the less favourable employment movement shown during the previous month, though the change was quite slight and seasonal in nature, unemployment at the end of the year standing at 69.1, in contrast with a percentage of 67.6 in November. The December percentage was based on the returns furnished to the Department of Labour by 206 associations, covering a membership of 15,139 members, 10,455 of whom were without employment on the last day of the month. Conditions for building tradesmen remained very similar to those prevailing in December, 1932, when 69.2 per cent of idleness was recorded. A pronounced drop in employment from November was apparent among painters, decorators and paperhangers, and bridge and structural iron workers, and recessions of much lesser degree occurred for carpenters and joiners, steam shovelmen, tile layers, lathers and roofers, hod carriers and building labourers, and plumbers and steamfitters. Activity for granite and stone cutters, however, was substantially improved from the previous month, bricklayers, masons and plasterers showing nominal gains only. Electrical workers maintained an unchanged situation from November. Employment for granite and stone cutters, bridge and structural iron workers, and painters, decorators and paperhangers during the month reviewed was in considerably greater prevalence than in December, 1932, and among bricklayers, masons and plasterers moderate improvement was recorded. Curtailment of activity almost sufficient to counteract these gains, however, occurred among steam shovelmen, carpenters and joiners, electrical workers, plumbers and steamfitters, and hod carriers and building labourers, the recessions indicated by electrical workers being the most pronounced. Among tile layers, lathers and roofers the same percentage of unemployment was registered as in December a year ago.

In the transportation industries during December nominal contractions in activity

were evident from the preceding month, though employment advancement, on a small scale, was noted from December, 1932, the 775 associations from which reports were tabulated, with 55,938 members showing 13·4 per cent of idleness at the end of the month, compared with percentages of 13·2 in November and 15·5 in December a year ago. Steam railway employees, whose returns included over 78 per cent of the entire group membership reported, maintained practically the same level of employment as in November. Teamsters and chauffeurs were quite busily engaged compared with a small percentage of idleness in the previous month. Among navigation workers moderate contractions in available work were apparent, the tendency for street and electric railway employees also being less favourable, though the change was fractional only. A higher level of activity was reflected among steam railway employees during December than in the same month a year ago, and employment for navigation workers advanced slightly. Among teamsters and chauffeurs, and street and electric railway employees the changes recorded from December, 1932, were practically negligible.

The 3 unions of retail clerks reporting in December, with a combined membership of 1,006 persons, indicated that all members were at work on the last day of the month, as was the case in November, while in December, 1932, the unemployment percentage recorded was less than 1 per cent.

Civic employees were better engaged during December than in either the previous month or December, 1932, as shown by the reports tabulated from 74 associations, comprising a membership of 6,898 persons. Of these, 193, or 2·8 per cent, were reported unemployed at the end of the month, compared with percentages of 3·2 in November and 6·3 in December, 1932.

Unions in the miscellaneous group of trades showed some falling off in employment during December from the previous month, the 109 locals making returns, with a total of 3,690 members, showing that 729, or 19·8 per cent, were without work, contrasted with 16·8 per cent in November. Stationary engineers and firemen reported a noteworthy drop in activity

from November, and among theatre and stage employees conditions were somewhat quieter. On the other hand, unclassified workers, barbers, and hotel and restaurant employees were slightly better engaged. There was little variation in the volume of work afforded in the miscellaneous group of trades, as a whole, from December, 1932, when unemployment stood at exactly 20 per cent, what slight change was manifest being in a favourable direction. In this comparison a considerable lessening of the unemployment volume was apparent during the month reviewed among unclassified workers. Stationary engineers and firemen, and barbers also showed a slight tendency toward greater activity. Hotel and restaurant, and theatre and stage employees, however, reflected less favourable conditions, the employment recessions noted being of moderate proportions.

The 2 unions of fishermen from which reports were tabulated during December, involving a membership of 680 persons, showed that 170 were idle on the last day of the month, a percentage of 25; compared with 26·3 per cent of inactivity in November. Employment was also on a somewhat higher level than in December, 1932, when 28·4 per cent of the members reported were unemployed.

The situation among lumber workers and loggers during December compared favourably with that of the previous month, though the change was slight, the 3 unions from which reports were received, with 546 members, indicating that 104 were without work at the end of the month, a percentage of 19·0, contrasted with 20·3 per cent in November. Improvement on a larger scale, however, was apparent from December, 1932, unemployment at that time standing at 51·9 per cent.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1932, inclusive, and also the percentage of unemployment by provinces for December of each year from 1919 to 1930, inclusive, and for each month from January, 1931, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

### (3) Employment Office Reports for December, 1933

The records of the Employment Service of Canada for the month of December, 1933, when compared with those of November, showed a decrease of nearly 5 per cent in the volume of business transacted, but a gain of almost 35 per cent over the average daily

placements of December, 1932. In the former comparison farming, logging and services showed large losses, and construction and maintenance a fair gain, other changes being nominal only. The expansion over the corresponding month a year ago was mainly

accounted for by a pronounced gain in placements in construction and maintenance, as a result of relief work sponsored by the Federal and provincial governments. Logging, mining and transportation also showed improvement. The highest loss was in services, followed by others of lesser magnitude in farming, manufacturing and trade.

The accompanying chart shows the trend of employment since January, 1931, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during December, 1933, was 1,588, as compared with 1,659 during the preceding month and with 1,188 in December a year ago.

The average number of applications for employment received daily by the offices during the month under review was 2,488, in comparison with 2,747 in November and with 1,913 in December, 1932.

The average number of placements made daily by the offices of the Service during December, 1933, was 1,513, of which 574 were

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o-o-o-o-o-o

being made semi-monthly. It will be seen from the graph that the curve of vacancies and of placements in relation to applications rose during the first half of December, but declined about 4 points during the latter half of the month, and at the close of the period under review was several points below that recorded at the end of December a year ago. The ratio of vacancies to each 100 applications was 65.6 and 61.6 during the first and the second half of December, 1933, in comparison with ratios of 57.2 and 68.6 during the corresponding periods of 1932. The ratios of placements to each 100 applications during the periods under review were 62.7 and 58.6, as compared with 54.4 and 64.4 during the corresponding month of 1932.

in regular employment and 939 in work of one week's duration, or less, as compared with a total daily average of 1,589 during the preceding month. Placements in December a year ago averaged 1,123 daily, consisting of 550 placements in regular and 573 in casual employment.

During the month of December, 1933, the offices of the Service referred 38,880 persons to vacancies and effected a total of 37,807 placements. Of these, the placements in regular employment were 14,343, of which 11,289 were of men and 3,054 of women, while placements in casual work totalled 23,464. The number of vacancies reported by employers was 32,949 for men and 6,734 for women, a total of 39,683, while applications

for work numbered 62,193, of which 53,256 were from men and 8,937 from women. Reports for November, 1933, showed 41,475 positions available, 68,660 applications made, and 39,709 placements effected, while in December, 1932, there were recorded 30,885 vacancies, 49,736 applications for work, and 29,192 placements in regular and casual employment.

During the year 1933, the offices of the Service throughout Canada reported 369,685 vacancies, 674,222 applications and 352,097 placements in regular and casual employment, this latter number being only slightly over 100 fewer placements than were recorded during the year 1932.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1923, to date:—

Year	Placements		
	Regular	Casual	Totals
1923.....	347,165	115,387	462,552
1924.....	247,425	118,707	366,132
1925.....	306,804	106,021	412,825
1926.....	300,226	109,929	410,155
1927.....	302,723	112,046	414,769
1928.....	354,604	135,724	470,328
1929.....	260,747	137,620	398,367
1930.....	187,872	180,807	368,679
1931.....	175,632	295,876	471,508
1932.....	153,771	198,443	352,214
1933.....	170,576	181,521	352,097

#### NOVA SCOTIA

Employment opportunities, as indicated by orders received at employment offices in Nova Scotia during December, were slightly more than 1 per cent better than in the preceding month but over 60 per cent below the corresponding month of 1932. There was a gain of over 3 per cent in placements when compared with November, but a loss of 65 per cent in comparison with December a year ago. The decrease in placements from December, 1932, was due to fewer workers being sent to relief employment on highway construction, as small declines in services and trade were largely offset by gains in other groups. Placements by industrial divisions included: logging, 22; construction and maintenance, 771; and services, 286, of which 217 were of household workers. During the month 32 men and 62 women were placed in regular employment.

#### NEW BRUNSWICK

During the month of December, positions offered through employment offices in New Brunswick were nearly 13 per cent less than

in the preceding month and over 24 per cent below December, 1932. Similar percentages of change were recorded in placements. As in Nova Scotia, fewer placements on road construction in relief of unemployment accounted for the decline from December, 1932. This loss was partly offset by gains in all other groups, of which the largest were services and manufacturing. Placements by industrial divisions included: manufacturing, 48; transportation, 19; construction and maintenance, 488; and services, 491, of which 362 were of household workers. There were 119 men and 52 women placed in regular employment during the month.

#### QUEBEC

There was a decline of over 19 per cent in the number of positions offered through employment offices in the Province of Quebec during December, when compared with the preceding month of 1932, but a gain of nearly 24 per cent in comparison with the corresponding month of 1932. Placements also were over 28 per cent less than in November, but nearly 28 per cent higher than during December a year ago. Services and logging showed considerable gains in placements over December, 1932, and the increases in these groups were mainly responsible for the improvement under this comparison. There were, however, in addition small increases in mining, trade and manufacturing. Placements by industrial divisions included: manufacturing, 89; logging, 213; mining, 29; construction and maintenance, 161; trade, 86; and services, 1,349, of which 1,205 were of household workers. Regular employment was found for 554 men and 1,012 women.

#### ONTARIO

The demand for workers, as indicated by reports received at employment offices in Ontario during December, was over 1 per cent higher than in the preceding month, but nearly 100 per cent above the corresponding month of 1932. Placements were nearly 3 per cent higher than in November and over 100 per cent above December a year ago. The substantial increase in placements on relief work and snow shovelling accounted for the gain over December, 1932. There were, however, in addition small increases in logging, mining, and communication. Of the losses reported in other groups, that in services was the largest. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 343; logging, 854; farming, 194; transportation, 95;

construction and maintenance, 16,613; trade, 308; and services, 3,018, of which 1,398 were of household workers. Placements in regular employment numbered 3,308 of men and 871 of women.

#### MANITOBA

During December, employment offices in Manitoba received orders for over 8 per cent less workers than in the preceding month, but nearly 5 per cent more than during the corresponding month of 1932. There was a decline of nearly 12 per cent in placements when compared with November, but a gain of 9 per cent in comparison with December a year ago. Farm and bush placements were considerably higher than in December, 1932, but these gains were offset, in part, by declines in services, construction and maintenance, and trade. The changes in other groups were nominal only. Placements by industrial divisions included: manufacturing, 22; logging, 442; farming, 1,580; construction and maintenance, 877; trade, 23; and services, 590, of which 503 were of household workers. There were 2,768 men and 337 women placed in regular employment.

#### SASKATCHEWAN

Orders received at employment offices in Saskatchewan during December called for nearly 29 per cent less workers than in the preceding month and nearly 34 per cent less than during the corresponding month of 1932. There was a decline of over 32 per cent in placements when compared with November and of nearly 33 per cent in comparison with December a year ago. Farm placements were considerably less than in December, 1932, and in a large measure accounted for the adverse change under this comparison. There was also a decline in construction and maintenance, but bush placements were higher. Small changes only were reported in other groups. Placements by industrial divisions included: manufacturing, 47; logging, 102; farming, 1,101; mining, 29; construction and maintenance, 637; trade, 41; and services, 628, of which 486 were of household workers. During the month 1,586 men and 366 women were placed in regular employment.

#### ALBERTA

Opportunities for employment, as indicated by orders received at employment offices in Alberta during December, were over 10 per cent less than in the preceding month, but nearly 19 per cent above the corresponding month of 1932. There was a decline of over

10 per cent in placements when compared with November, but a gain of 20 per cent in comparison with December a year ago. An increase in placements on road construction and maintenance accounted for the improvement shown over December, 1932, as gains in mining and farming were offset by declines in services and logging. Industrial divisions in which most of the placements were effected during the month were: logging, 121; farming, 454; mining, 119; construction and maintenance, 1,101; and services, 332, of which 261 were of household workers. There were 1,281 men and 184 women placed in regular employment during the month.

#### BRITISH COLUMBIA

Orders received at employment offices in British Columbia called for over 11 per cent more workers than in the preceding month, and nearly 15 per cent more than during the corresponding month of 1932. There was a gain of nearly 10 per cent in placements when compared with November and of nearly 13 per cent in comparison with December a year ago. The increase in placements over December, 1932, was due to additional workers being sent to employment on road construction, supplemented by small gains in farming and logging. The only loss of importance was in services. Placements by industrial divisions included: logging, 25; farming, 44; construction and maintenance, 3,096; trade, 33; and services, 660, of which 437 were of household workers. Placements in regular employment numbered 1,641 of men and 170 of women.

#### The Movement of Labour

During the month of December, 1933, the offices of the Employment Service of Canada made 14,320 placements in regular employment, 7,321 of which were of persons for whom the employment located was outside the immediate vicinity of the offices at which they were registered. Of the latter, 781 were granted the Employment Service reduced transportation rate, 482 going to centres within the same province as the despatching office, and 299 to other provinces. The reduced transportation rate, which is 2.7 cents per mile with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

The movement of labour from Quebec centres during December was entirely of bushmen, 89, in number, 71 of whom were conveyed to employment within the province and

\*1,128 Placements effected by offices since closed.

18 outside. Provincially 62 travelled from Quebec City, and 9 from Montreal, to points within their respective zones. The Hull office was responsible for all interprovincial transfers, despatching 15 bushmen to Sudbury, 2 to Timmins, and 1 to Pembroke. Reduced rate certificates issued at Ontario offices during December totalled 267, of which 262 were provincial and 5 interprovincial. Within the province 150 were granted at Port Arthur to 124 bushmen, 20 logging camp builders, 1 clerk, 1 cook, 1 cookee, 2 mine workers, and 1 café employee going to situations within the Port Arthur zone. To the Timmins zone were despatched 20 bushmen, 5 from Fort William, 8 from North Bay, 4 from Ottawa, 1 from Pembroke, and 2 from Sudbury, the Fort William office also transferring 1 mine engineer to this zone. For employment within the Sudbury zone Pembroke transferred 35 bushmen, Toronto 41 bushmen, and the Sudbury office 12 bushmen. Travelling from Windsor 1 tin plate operator went to Sarnia, and from Sudbury 2 mine workers were carried at the special rate to Port Arthur. Of the workers going outside the province 4 were for the Amos zone, including 2 acetylene welders and 1 baker transferred from Timmins and 1 cook from Ottawa. Securing a certificate at Ottawa also 1 cook travelled to Rouyn. Workers benefiting by the reduced rate in Manitoba during December numbered 253, of whom 12 were transported to provincial situations and 241 to other provinces. Of the latter 240 were for the Port Arthur zone, including 237 bush workers, 1 baker, 1 teamster, and 1 tractor man, all of whom were conveyed from Winnipeg, which office effected the transfer of 1 farm hand to Regina. The provincial labour movement was also from Winnipeg, from which centre 6 construction labourers, 2 mechanics, 1 mine chemist, 1 logger, 1 hotel general, and

1 stenographer travelled to situations at various points within the Winnipeg zone. Offices in Saskatchewan granted 56 certificates for reduced transportation during December, 21 of which were issued to provincial points, and 35 to centres outside the province. Provincially, 20 were secured by bush workers bound for the Prince Albert zone, 14 travelling from Saskatoon and 6 from Prince Albert. In addition, the Saskatoon office despatched 1 farm hand to employment within its own zone. The interprovincial movement comprised the transfer of 34 bushmen from Regina to Winnipeg, and 1 construction labourer from Saskatoon to Brandon. In Alberta, 105 workers took advantage of the Employment Service reduced transportation rate during December, all of whom were destined to situations within the Edmonton zone. Included among these were 70 bush workers, 20 mine workers, 4 farm hands, 6 fish company employees, 1 edgerman, 2 cooks, and 1 axe man, who received their certificates for transportation at the Edmonton office, while the 1 remaining transfer was of a farm hand shipped from Calgary. British Columbia transfers at the reduced rate during December were 11 in number, all to provincial points. The Vancouver office was instrumental in the despatch of 1 hotel waitress to Kamloops and of 3 mine workers, 1 carpenter, 1 plasterer, 1 hotel cook, and 1 bushman to centres within its own zone. From Nelson 3 millwrights proceeded to Pen-ticton.

Of the 781 persons who availed themselves of the Employment Service reduced transportation rate during December, 311 journeyed over the Canadian National Railways, 438 over the Canadian Pacific Railway, 14 over the Northern Alberta Railway, 11 over the Temiskaming and Northern Ontario Railway, and 7 over the Pacific Great Eastern Railway.

#### (4) Building Permits issued in Canada during December, 1933

The building permits issued by 61 cities in December, 1933, represented construction work valued at \$1,975,855, as compared with \$1,609,874 in November, 1933, and \$1,569,255 in December, 1932. There was, therefore, an increase of \$365,981 or 22.7 per cent in December as compared with the preceding month, and of \$406,600 or 25.9 per cent in comparison with the same month of 1932. The December, 1933, figure was the lowest for the month in any year since 1920, except 1932; the wholesale prices of building materials, as measured by the Bureau's index number, however, were also lower than in other years of the record of fourteen years with the exception of 1932.

74264-7½

Detailed statements were received from some 50 cities, showing that they had issued almost 60 permits for dwellings valued at some \$305,000 and over 400 permits for other buildings at an estimated cost of about \$1,500,000. There was also a permit taken out in Brantford for engineering work at a cost of \$36,000. During November, the construction of some 150 dwellings and 970 other buildings was authorized; these were estimated to cost approximately \$600,000 and \$875,000, respectively.

As compared with the preceding month, New Brunswick, Quebec, Ontario, and Saskatchewan reported increases in the value of

the authorized building, Quebec showing the greatest gain of \$482,548 or 135.7 per cent. Declines were indicated in the remaining provinces, that of \$72,331 or 65.2 per cent in British Columbia being most pronounced.

New Brunswick, Quebec and Ontario recorded increases as compared with December, 1932, in the value of the building authorized. In this comparison also, Quebec reported the most marked gain of \$577,300 or 214.3 per cent.

Of the four largest cities, Montreal registered increases, both as compared with November, 1933, and December, 1932; Toronto showed an increase in the former, but a decrease in the latter comparison. On the contrary, Winnipeg reported a decline as compared with November, 1933, but an increase over December, 1932, while Vancouver showed a reduction in the value of the building permits issued in each comparison. Of the smaller centres, Sydney, Fredericton, Quebec, Shawinigan Falls, Brantford, Guelph, Hamilton, London, Niagara Falls, St. Catharines, York and East York, Windsor, Riverside, Walkerville, Brandon, Regina and North Vancouver recorded advances as compared with the preceding month, and also over December, 1932.

*Cumulative Record for 1933.*—The following table shows the value of the building authorized by 61 cities during December and in the years since 1920; the 1933 figures are unrevised, while for preceding years the statistics are revised. (A revised statement for 1933

will be issued next month.) Index numbers, based upon the total value of the building authorized by these cities during 1926 as 100, are given below, as are the average index numbers of wholesale prices of building materials in the years 1920-33. (Average 1926=100.)

Year	Value of permits issued in December	Value of permits issued in twelve months	Indexes of value of permits issued in twelve months (1926=100)	Average indexes of wholesale prices of building materials twelve months (Average 1926=100)
	\$	\$

1929.....	14,688,682	234,944,549	150.2	99.0
1928.....	16,095,160	219,105,715	140.1	97.1
1927.....	11,755,566	184,613,742	118.0	96.1
1926.....	11,508,818	156,386,607	100.0	100.0
1925.....	7,363,777	125,029,367	79.9	102.9
1924.....	6,463,319	126,583,148	80.9	106.6
1923.....	6,974,256	133,521,621	85.4	111.8
1922.....	9,517,402	148,215,407	94.8	108.7
1921.....	5,537,330	116,794,414	74.7	122.7
1920.....	4,844,354	117,019,622	74.8	144.0

The unrevised statistics for 1933 indicate that last year's aggregate was the smallest since 1920; it should be noted, however, that the Bureau's index number of wholesale prices of building materials was also lower than in any other of these years except 1932.

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

### Great Britain

THE British *Ministry of Labour Gazette*, January, 1934, summarized the employment situation as follows:—

Employment at December 18 showed a further improvement in coal mining, engineering, shipbuilding and ship-repairing, steel melting and iron and steel rolling, etc., miscellaneous metal goods manufacture, vehicle building, the manufacturing section of the cotton industry, and the distributive trades. There was also some improvement in textile bleaching, dyeing and finishing, tailoring, printing, and bookbinding, and the road transport, shipping, hotel and boarding house services.

On the other hand the seasonal decline continued in building and public works contracting, and there was also a set-back in the pottery, boot and shoe, leather and hosiery industries.

In the South of England employment showed a slight decline on the whole, but was still fair to moderate. In the Midlands it continued to improve and was moderate. There was a further substantial improvement in the North of England, but employment in that area was still very slack. In Scotland and Wales there was a slight decline; employment was bad in the former area, and very bad in the latter. It was also bad, with a slight decline, in Northern Ireland.

Among the workpeople, numbering approximately 12,883,000, insured against unemployment in Great Britain and Northern Ireland and working in practically every industry except agriculture and private domestic service, the percentage unemployed at December 18, 1933 (including those temporarily stopped as well as those wholly unemployed) was 17.6, as compared with 17.9 at November 20, 1933, and with 21.7 at December 19,

1932. The percentage wholly unemployed at December 18, 1933, was 15.1, as compared with 15.3 at November 20, 1933; while the percentage temporarily stopped was 2.5, as compared with 2.6. For males alone, the percentage at December 18, 1933, was 20.8, and for females, 9.0; at November 20, 1933, the corresponding percentages were 21.1 and 9.4.

At December 18, 1933, the number of persons on the Registers of Employment Exchanges in Great Britain was 1,830,977 wholly unemployed, 308,821 temporarily stopped and 84,281 normally in casual employment, making a total of 2,224,079. This was 55,938 less than a month before, and 499,208 less than a year before. The total included 1,871,196 men, 43,107 boys, 280,489 women and 29,287 girls.

In Great Britain and Northern Ireland, the total number of persons on the Registers of Employment Exchanges at December 18, 1933, was 2,287,466.

#### United States

*Manufacturing Industries.*—Index numbers showing the trend of employment and pay rolls in manufacturing industries are computed monthly by the Bureau of Labor Statistics of the U.S. Department of Labor from reports supplied by representative establishments in 89 of the principal manufacturing industries of the United States and covering the pay period ending nearest the 15th of the month. These indexes of employment and pay rolls are figures showing the percentage represented by the number of employees or weekly pay rolls in any month compared with employment and pay rolls in a selected base period. The year 1926 is the Bureau's index base year for manufacturing industries, and the average of the 12 monthly indexes of employment and pay rolls in that year is represented by 100 per cent.

Factory employment decreased 1.8 per cent in December, 1933, as compared with November, 1933, and pay rolls decreased 1 per cent over the month interval. The index of employment in manufacturing industries in December, 1933, was 70.1, compared with the index of 71.4 in the preceding month while the pay-roll index in December was 49.8 compared with 50.3 in November, 1933.

Comparing the level of employment in December, 1933, with December, 1932, the index is 20.2 per cent above the level of that for December, 1932 (58.3). The December, 1933, pay-roll index, compared with the December, 1932, pay-roll index (37.7) indicates an increase of 32.1 per cent in pay rolls over the corresponding month of the preceding year.

Employment in manufacturing industries has declined between November and December in 7 of the preceding 10 years for which information is available. The decrease, however, of 1.8 per cent in employment in December, 1933, is slightly greater than the average decline of 0.8 per cent between November and December over the period 1923-1932. The decrease of 1.0 per cent in pay roll in December, 1933, is contrary to the average change in pay rolls between November and December over the preceding 10-year period (an average increase of less than one-tenth of 1 per cent).

These changes in employment and pay rolls in December, 1933, are based on reports supplied by 18,015 establishments in 89 of the principal manufacturing industries of the United States. These establishments reported 3,125,093 employees on their pay rolls during the pay period ending nearest December 15 whose combined weekly earnings were \$56,352,943. The employment reports received from these co-operating establishments cover approximately 50 per cent of the total wage earners in all manufacturing industries of the country.

Increases in employment were reported in 25 of the 89 manufacturing industries surveyed. Thirty-seven industries reported increases in pay rolls over the month interval. The most pronounced gains in both employment and pay rolls between November and December were in the automobile industry, in which increases of 16.7 per cent in employment and 16.3 per cent in pay rolls were reported. These sharp increases reflect the increased operations in automobile plants, marking the production of new models. The electric and steam car-building industry reported a gain of 11.9 per cent in employment and a corresponding gain in pay-roll totals, and the agricultural implement industry reported an increase of 9.2 per cent in number of workers with larger gain in earnings. Among the remaining 22 industries in which increased employment was reported, substantial gains in employment over the month interval were reported in such important industries as ship-building (6 per cent), hardware (5.5 per cent), engines-turbines-tractors (5.1 per cent), cast-iron pipe (4.4 per cent), book and job printing (3.8 per cent), leather (3.5 per cent), beverages (3.1 per cent), and machine tools (2.1 per cent). While 64 industries reported decreased employment, a number of the decreases were of seasonal character. Industries of major importance in which decreased employment was shown were men's clothing (5.9 per cent), silk (5.6 per cent), sawmills (4.1 per cent), woollen goods (4 per cent), cotton

goods (3 per cent), and iron and steel (1·3 per cent). The iron and steel industry, however, reported a gain of 1·9 per cent in pay rolls, indicating improved operating time in a number of establishments.

*Non-Manufacturing Industries.*—Increased employment in December, as compared with November, was reported in 6 of the 16 non-manufacturing industries surveyed monthly by the Bureau of Labour Statistics and increased pay rolls were reported in 10 industries. The most pronounced percentage gains in employment and pay rolls over the month interval were shown in retail trade. Reports received from 19,062 retail establishments indicated a net increase of 15·1 per cent in employment and 10·6 per cent in pay rolls in these establishments between November 15 and December 15. These pronounced percentage gains are due largely to seasonal fluctuations in the group of retail establishments composed of department, variety, general merchandise stores and mail order houses, in which the Christmas trade resulted in an increase of 23·1 per cent in employment and 17·6 per cent in pay rolls. The remaining retail establishments surveyed showed a gain of 1·2 per cent in employment over the month interval combined with an increase

of 0·7 per cent in pay rolls. The crude petroleum producing industry reported gains of 3·8 per cent in employment and 5·7 per cent in pay rolls, and the hotel industry increases of 2·4 per cent in number of workers and 4·2 per cent in pay rolls. The bituminous coal mining and the telephone and telegraph industries both showed increases in employment of 0·8 per cent combined with smaller gains in pay rolls, and the metalliferous mining industry an increase of less than  $\frac{1}{10}$  of 1 per cent in employment combined with an increase of 2·6 per cent in pay rolls.

The most pronounced declines in employment and pay rolls in the group of non-manufacturing industries were seasonal declines. The building construction industry reported seasonal decreases of 18·3 per cent and 20·8 per cent in employment and pay roll, respectively. The quarrying and non-metallic mining industry reported a seasonal decrease of 11·3 per cent in employment and 13·7 per cent in pay rolls. Employment in the anthracite mining industry decreased 10·6 per cent between November and December and the dyeing and cleaning industry reported a decline, largely seasonal, of 7·3 per cent. The power and light industry show a fall of 1 per cent in employment.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government with respect to contracts "for construction, remodelling, repair or demolition of any work" is set forth in an Act of Parliament adopted on May 30, 1930, entitled "The Fair Wages and Eight-Hour Day Act" (chapter 20-21, Geo. V). The full text of this measure appeared in the LABOUR GAZETTE, April, 1930, page 383. The Fair Wages and Eight-Hour Day Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repairs or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(a) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which

the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or, except in cases of emergency, as may be approved by the Minister.

(2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication or manufacture is carried on in any established plant or factory other than a plant or factory established for the purposes of the work contemplated.

The Fair Wages Policy was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by Order in Council of April 9, 1924. The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wages rates for the different classes of workmen required in the execution of the work.

These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of contract.

In addition to the requirements of the Fair Wages and Eight-Hour Day Act, government contracts for the construction, remodelling, repair or demolition of any work, contain a number of other provisions for the protection of the workmen employed, which are sanctioned by the foregoing Orders in Council.

It is further provided in the foregoing Orders in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings; harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees; mail bags, letter boxes, and other postal stores; and any other articles and things hereinafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions, which are referred to in the Orders in Council as "B" conditions (the Conditions of the Fair Wages Orders in Council with reference to building and construction works being designated as "A" conditions), include the following Fair Wages Clause:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

Both in the case of contracts for building and construction work, and in the "B" conditions sanctioned by Orders in Council applicable to contracts for the manufacture of certain classes of supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates and working hours.

The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and address of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed claim therefore may be filed with the Minister of the Department with which the contract has been made and payment of such claim may be made by the latter.

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially directed by the Fair Wages Orders in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of certain classes of supplies listed in the Fair Wages Orders in Council it is required that the contractor's premises and the work being

performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts, for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any disputes which may arise.

During the past month statements were received in the Department of Labour showing that the following contracts, containing fair wages conditions, have been recently executed by the Government of Canada:—

#### DEPARTMENT OF NATIONAL DEFENCE

##### *Contracts in Group "B" (Manufacture and Supply of Clothing, Interior Fittings, etc.)*

The following is a statement of contracts awarded by the Department of National Defence during the month of January, 1934, for various classes of manufactured goods, which contracts included in all cases the "B" labour conditions above referred to:—

Goods contracted for	Contractor
Khaki drill for shirts.....	Dominion Textile Co., Montreal, P.Q.
Khaki drill for trousers.....	W. Robinson & Son Converters Ltd., Toronto, Ont.
Miscellaneous ware.....	General Steel Wares Ltd., Montreal, P.Q.
Seamen's overcoats.....	Workmen Uniform Co., Montreal, P.Q.
Towels.....	Stauffer Dobbie Ltd., Galt, Ont.
Laundry soap.....	Northern Soap Co., Winnipeg, Man.
Trousers, cloth.....	H. Kaye & Co., Trenton, Ont.
Mattresses, camp.....	P. D. Sprung, Calgary, Alta.
Leather mitts.....	Western Glove Works, Ltd., Winnipeg, Man.
Mattresses and pillows....	Canadian Feather & Mattress Co., Ltd., Ottawa, Ont.
Underwear.....	Schofield Woollen Co., Oshawa, Ont.
Gum rubber boots.....	Woodstock Rubber Co., Woodstock, Ont.
Gum rubber boots.....	Northern Rubber Co., Guelph, Ont.
Felt boots.....	Great West Felt Co., Elmira, Ont.
Trousers, cloth.....	Needlecraft Mills, Ltd., St. Hyacinthe, P.Q.
Cases, pailasse.....	Simmons Ltd., Montreal, P.Q.
Enamelware.....	General Steel Wares, Ltd., Montreal, P.Q.
Underwear, fleece-lined..	Zimmerkmit Ltd., Hamilton, Ont.
Underwear, fleece-lined..	Jos. Simpson Sons, Ltd., Toronto, Ont.
Underwear, fleece-lined..	Penmans Ltd., Montreal, P.Q.
Underwear, fleece-lined..	Galt Knitting Co., Ltd., Galt, Ont.
Socks.....	Brampton Knitting Mills, Brampton, Ont.
Trousers, drill.....	Woods Mfg. Co., Ottawa, Ont.
Trousers, drill.....	Gault Bros., Ltd., Vancouver, B.C.

These contracts involved a total expenditure of \$55,048.00.

#### DEPARTMENT OF PUBLIC WORKS

##### *Contract in Group "A" (Construction, etc.)*

Construction of repairs to hull, spud casings, etc., of Dredge *P.W.D. No. 13*, at Port Hawkesbury, N.S. Name of contractors, Port Hawkesbury Marine Railway Co., Ltd., Port Hawkesbury, N.S. Date of contract, January 23, 1934. Amount of contract, \$7,676.75 and unit prices. The General Fair Wages Clause was inserted in the contract.

#### POST OFFICE DEPARTMENT

Following is a statement of payments made in January, 1934, for supplies ordered by the Post Office Department under contracts which were subject to regulations for the suppression of the sweating system, the securing of the payment to the workers of fair wages, and the performance of the work under proper sanitary conditions:—

Nature of Orders	Amount
<i>Making metal dating stamps and type, brass crown seals, cancellers, etc.</i> Pritchard-Andrews Co. of Ottawa, Ltd. ....	\$ 373 01
<i>Making and repairing rubber stamps, daters, etc.</i> Pritchard-Andrews Co. of Ottawa, Ltd. ....	232 81
<i>Making and supplying letter carriers' uniforms.</i> Jay Wolfe Incorporated, Montreal, P.Q. ....	120 00
Paton Manufacturing Co., Ltd., Montreal, P.Q. ....	8,231 42
Wm. Scully Ltd., Montreal, P.Q. ....	833 00
Workman Uniform Co., Ltd., Montreal, P.Q. ....	3,640 17
<i>Mail Bag Fittings.</i> F. W. Carling, Ottawa, Ont. ....	2,544 00
<i>Scales.</i> Pritchard-Andrews Co. of Ottawa, Ltd. ....	370 90

Physical examination of all unemployed persons before being put to work was recommended by Dr. J. W. Barton of Toronto, in connection with the death of a relief worker a few hours after beginning his first job in six months. "Men on relief," he said, "should be examined whether living in hostels or at home. It would perhaps be a very sound move to have them categorized physically, as was done in the army. That is, the man in class A would be able to do any work. The man in class B could do work like driving trucks, but not loading them. The class C man would be confined to clerical work."

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In each agreement or schedule the rates of wages for the principal classes of labour are given, with other information of general interest.

Amendments to agreements between the two principal railway systems and certain groups of employers are described in connection with proceedings under the Industrial Disputes Investigation on page 100, all with respect to provisions for fifteen per cent deductions (with certain modifications) from each employee's earnings instead of ten per cent as under previous amendments to existing agreements:

Canadian National Railways and clerks, freight handlers and station employees, members of the Canadian Brotherhood of Railway Employees;

Canadian Pacific Railway and clerks, freight handlers and station employees, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees (International).

Canadian National Telegraphs and (1) Commercial telegraphers, clerks and installers, (2) construction and maintenance gangs, members of the Commercial Telegraphers' Union of North America.

Canadian Pacific Railway, Communications Department, and commercial telegraphers and clerks, members of the Commercial Telegraphers' Union of North America.

### Manufacturing: Textiles and Clothing

**TORONTO, ONTARIO.**—THE INDUSTRIAL COUNCIL OF CLOAK AND SUIT MANUFACTURERS OF TORONTO AND THE INTERNATIONAL LADIES' GARMENT WORKERS' UNION.

Agreement signed January 29, 1934, terminating a strike reported on page 108 of this issue.

The agreement provides for recognition of the union as the sole representative of the workers; for the closed union shop, none but members in good standing to be employed; prices for work to be settled by shop chairman and price committee, no work to be made up unless price is first settled at the beginning of the season, thereafter employers to pay prices asked and

arbitrate any differences; equal division of work for all crafts.

Hours of work: 44 per week, overtime to be worked only with the consent of the union or the General Council.

Wages: operators, 90 cents per hour for 80 per cent of the operators in a shop; cutters \$35 per week, subject to certain modifications, to be increased to \$37.50 on July 1, 1934; over pressers on the basis of 90 cents per hour or 15 per cent increase whichever is greater; under pressers on the basis of 60 cents per hour or 15 per cent increase whichever is greater.

No work to be given out, cut or uncut to be made up in outside or contracting shops; no inside contracting. No work and no pay on legal holidays, except for shops already paying for legal holidays. Workers may stop work May 1.

Union representatives to have access to the place of business during working hours to adjust complaints, etc.

Means of arbitration are set up for expeditiously dealing with all disputes.

The Industrial Council assumes responsibility for each member thereof in the observance of the agreement; each employer to deposit security payable to the solicitors of the respective organizations to be forfeited on its violation in the judgment of the two solicitors; forfeited money to be used for a market survey or the maintenance of arbitration machinery.

**TORONTO, ONTARIO.**—CERTAIN DRESS MANUFACTURERS AND THE TORONTO DRESSMAKERS JOINT COUNCIL, COMPRISING THE CUTTERS' PRESSERS, OPERATORS AND FINISHERS' LOCALS OF THE INDUSTRIAL UNION OF NEEDLE TRADES WORKERS OF CANADA.

Agreement reached following the strike reported on page 109 of this issue. Agreement to be in effect from January 22, 1934, to January 30, 1935, and thereafter from year to year, subject to notice.

Only members of this union to be employed. No work to be done for individual firms against which the union is conducting a strike.

Hours 8 per day, 4 on Saturday, a 44-hour week.

No overtime to be permitted if other help can be obtained from the union and if there is room and extra machinery for such extra help. No work on legal holidays nor on May 1.

Minimum wages per week for week workers: \$30 for fully qualified cutters, \$13.50 for cutters' apprentices employed at the cutting table between six months and one year, \$12.50 for finishers, drapers \$18, pressers 20, 22, or 27½ cents per garment. Piece work rates to be settled between the employer and the shop committee. In case of disagreement, a union representative to be called in.

No additional apprentices to be employed until all unemployed union members have been absorbed.

No work to be given out to be done at contracting shops.

No employer, foreman or designer to work as a cutter, operator, presser or finisher except under specified conditions.

No employee to be discharged without good and sufficient cause and without the consent of the union.

A shop committee to be chosen at a meeting of the employees and any disputes which cannot be settled between the manufacturer and the shop chairman to be referred to the union representative for settlement.

## Transportation and Public Utilities: Street and Electric Railways

### MONTREAL, QUEBEC.—MONTREAL TRAMWAYS COMPANY AND THEIR EMPLOYEES.

This agreement was reached following conferences between the parties and the Minister of Labour of Quebec, with reference to the application of the Hours of Work Act 1933, to motormen and conductors at Montreal (LABOUR GAZETTE, September, 1933, page 874). Agreement to be in effect from January 1, 1934, to June 30, 1936 and thereafter from year to year, subject to notice, except for certain clauses which may be amended at the end of any calendar year.

This agreement is similar to the one previously in effect and printed in the LABOUR GAZETTE, March, 1930, page 328, as amended and noted in the LABOUR GAZETTE, October, 1933, page 1037, with a number of changes including the following:

Hours: conductors, motormen and chauffeurs limited to 54 per week and all bookings between 45 and 54 hours per week must be completed in 6 days, but men who have worked less than 42 hours in 6 days may work on 7th day providing the total does not exceed 42 hours for the week. Runs may be booked for 36 to 44 hours in 7 days. No employee to be obliged to book on a run making less than 36 hours per week. For work at Youville shops and car barns, for maintenance men and overhead department of power department, construction department shop employees: 40 per week. For operating men of power department: 56 hours per week. For construction department: 48 hours if work available.

Overtime: time and one-half after 10 hours' work at Youville shops and for maintenance men of power department. Time and one-quarter for work over ten hours for overhead department of power department and construction department shop employees. Provision is also made for overtime pay to construction gangs.

Wages rates for transportation department are the same as in 1933, that is 41 cents per hour for conductors, motormen and starters during first year's service, 46 cents during second year and 51 cents thereafter, with 5 cents per hour additional for one-man car operators, and for special kinds of work; 52 cents for auto-bus chauffeurs during first year's service, 56 cents during second year, 29 cents for hill-men during first year and 33 cents during second year. Wages per hour for road department: spring switch inspector 47 cents, trackmen 45½ cents in city, 43 cents on outside lines and 40 cents for snow work. Sectionmen and yard switchmen 38 cents, sub-foremen 51 cents in summer, 47 cents in winter, 45½ cents for snow work. Wages for labourers of construction department 31 cents.

### VANCOUVER, VICTORIA AND OTHER CENTRES IN BRITISH COLUMBIA.—THE BRITISH COLUMBIA ELECTRIC RAILWAY COMPANY LIMITED AND THE AMALGAMATED ASSOCIATION OF STREET AND ELECTRIC RAILWAY EMPLOYEES OF AMERICA.

The agreement which came into effect September 30, 1927, was summarized in the LABOUR GAZETTE, August, 1928, page 905. This was renewed for a period of three years as noted in the LABOUR GAZETTE, November, 1931, page 1255, but a wage reduction of 5 per cent from December 1, 1932 was agreed to. The report of a Board under the Industrial Disputes Investigation Act was given in the LABOUR GAZETTE, January, 1934, page 9. The recom-

mendations of the majority report of this Board were not however put into effect, and an agreement was later made to be in effect from January 16, 1934, to January 16, 1935, and thereafter subject to 60 days' notice.

This agreement renews the terms of the previous one except that it provides that, notwithstanding the clause in the previous agreement providing for motormen and conductors on regular runs having every eighth day off, the present practice of such men taking one day off in every six is to be continued until such time as it is necessary to engage additional men, in which case the matter is to come up for reconsideration.

Bus operators on certain routes (not previously specified in the agreement) are to have the same wages and conditions as provided for the Grandview operators. No other change is made in hours, wage rates or conditions from those in effect since December 1, 1932.

## Service: Hotel and Restaurant

### TORONTO, ONTARIO.—CERTAIN RESTAURANTS IN THE SPADINA AVENUE DISTRICT AND THE TORONTO RESTAURANT AND HOTEL EMPLOYEES' LOCAL OF THE FOOD WORKERS' INDUSTRIAL UNION OF CANADA.

Agreement reached following strike reported on page 110 to be in effect from various dates in January, 1934.

Union members to be employed or if none available any others employed must join the union.

Hours: a six day week for all employees; 10 hours per day or 60 per week for all kitchen help, day to be a straight 10 hours after commencing work; 9 per day or 54 per week for all other employees and day may be divided into two periods. Extra help 6 hours divided into two periods.

Overtime to be worked only with consent of union and to be paid at 50 cents per hour.

Wages per week: chef or head cook \$15, second cook \$12, countermen \$12, waiters and waitresses \$10, bus boy or girl \$7, kitchen help \$8, extra men \$2.50 per day or \$1.50 for 3 hours work. Workers now receiving the minimum wage to be given a 10 per cent increase. Wages for workers at catered banquets, etc. to be arranged with the union committee.

All disputes to be settled by the employer and the committee or union representative.

## Service: Recreational

### EDMONTON, ALBERTA.—CERTAIN THEATRES AND THE NATIONAL UNION OF THEATRICAL EMPLOYEES OF CANADA, LOCAL No. 11.

This agreement is the one referred to on page 101 of this issue in the report of a conciliation Board under the Labour Disputes Act of Alberta.

Agreement to be in effect from September 1, 1933, to August 31, 1935.

Only union members to be employed. Two weeks' notice of dismissal to be given except when for grave cause, and dismissals to have the approval of the union.

Hours: 5½ hours per day, 6 days per week. Projectionists to report for work one half hour before due to start work. Maintenance of projection equipment to be done in members' own time.

Overtime: 35 cents per quarter hour. Previews, extra running time at \$1.50 per hour.

Wages per week for each of the four projectionists in the theatre: \$37.50.

Disputes to be settled between the management and the executive of the union.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, JANUARY, 1934

### Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month continued upward, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being higher. The advance in the former was due to the higher cost of foods and in the latter mainly to higher prices for farm products, raw cotton and raw wool.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities in Canada was \$7.50 at the beginning of January as compared with \$7.37 for December, 1933; \$6.94 for January, 1933; \$11.88 for January, 1930; \$11.63 for January, 1926; \$11.03 for January, 1922; \$16.92 for June, 1920 (the post-war peak); and \$7.73 for January, 1914. The advance was due mainly to higher prices for butter, meats, and potatoes, while the most important decline was a seasonal fall in the price of eggs. Including the cost of fuel and rent with that of foods the total budget averaged \$15.95 at the beginning of January as compared with \$15.83 for December, 1933; \$15.89 for January, 1933; \$22.17 for January, 1930; \$21.96 for January, 1926; \$21.52 for January, 1922; \$26.92 for July, 1920 (the post war peak); and \$14.49 for January, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics again advanced, being 70.6 in January as compared with 69.0 in December, 1933. Comparative figures for certain previous dates are: 63.9 for January, 1933; 95.3 for January, 1930; 97.1 for January, 1922; 164.3 for May, 1920 (the post war peak); and 64.9 for January, 1914. One hundred and seventy-two prices quotations were higher, fifty-four were lower and three hundred and forty-one were unchanged.

In the grouping according to chief component materials seven of the eight main groups were higher and one was slightly lower. The groups which advanced were: the Vegetables and Vegetable Products group, due mainly to higher prices for barley, wheat, corn, flax, flour, bran and shorts; the Animals and their Products group, because of higher prices for steers, calves, hogs, fresh and cured meats, hides, furs, and butter, which more than offset lower quotations for lambs, leather and eggs; the Fibres, Textiles and Textile Products group, mainly owing to advanced quotations

for raw cotton, raw wool, cotton fabrics and wool blankets; the Wood, Wood Products and Paper group, because of higher prices for certain lines of lumber and for shingles; the Iron and its Products group, because of higher prices for certain rolling mill products; the Non-Ferrous Metals and their Products group, because of increases in the prices of copper, silver, tin and zinc; and the Non-Metallic Minerals and their Products group, because of advanced quotations for window glass, lime and plaster. The Chemicals and Allied Products group was slightly lower.

In the grouping according to purpose both consumers' goods and producers' goods were higher, the former chiefly on account of higher prices for flour, tea, meats, vegetables, certain cotton fabrics and worsted cloth yarns, and the latter due mainly to higher prices for lumber, painters' materials, materials for the meat packing industries, for the milling industries and for the furs and leather goods industries.

In the grouping according to origin raw and partly manufactured goods and fully and chiefly manufactured goods both advanced. In articles of farm origin both animal products and field products advanced. Articles of marine origin were slightly lower and articles of forest origin and of mineral origin were higher.

### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of January of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amounts due.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which statistics were available when first published in the *LABOUR GAZETTE* in January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

### Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living, based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number for rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and costs of the various items from 1913 to 1926, weighted according to the importance of each item in workingmen's family expendi-

ture, and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

\*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18½%; Clothing, 18½%; Sundries, 20%.

### Retail Prices

The decline in beef prices in progress since the summer of 1933 was halted in January, 1934, and slight increases occurred in most localities being more pronounced however in the western provinces. Sirloin steak averaged 20 cents per pound as compared with 19 cents in December, 1933, rib roast 15·4 cents per pound as compared with 14·8 cents in December and shoulder roast 10·9 cents per pound as compared with 10·2 cents in December. Veal and mutton also were higher, the former averaging 12 cents per pound in January as compared with 11·3 cents in Decem-

\* Prior to 1926 number of price series was 236 and commencing in January 1934 the number is 567.

*(Continued from page 196)*

ber, and the latter averaging 19 cents per pound as compared with 17.4 cents in the previous month. Fresh pork was higher in most localities, averaging 16.6 cents per pound in January, an advance of 1 cent per pound over the figure for December.

Eggs showed a seasonal decline, fresh averaging 40.7 cents per dozen as compared with 44.8 cents the previous month, and cooking averaged 30.2 cents per dozen in January as compared with 30.9 cents in December. Milk was unchanged at an average price of 9.7 cents per quart. Butter prices were higher in nearly all localities, dairy being up from an average of 22.2 cents per pound in December to 24.4 cents in January and creamery from 25.6 cents per pound to 28.4 cents.

Bread has been unchanged during the past five months, the average price being 5.9 cents per pound. The price of potatoes has shown little movement in recent months, averaging \$1.09 per ninety pounds in January as compared with \$1.06 in December and \$1.10 in November. The price of sugar has been unchanged at an average of 8 cents per pound

during the last six months. The price in January, 1933, was 5.8 cents per pound. The price of tea continued upward in most localities, the Dominion average advancing from 43.9 cents per pound in December to 45.7 cents in January. Coal prices were practically unchanged. No changes were reported in rent.

The following are the prices reported for Welsh coal, domestic sizes: Halifax, \$16.50; Charlottetown, \$14.40; Moncton, \$16; Saint John, \$14; Quebec, \$13.50; Three Rivers, \$15; Sherbrooke, \$16.25; St. Hyacinthe, \$14.75; Montreal, \$14.75; Ottawa, \$16.75; Kingston, \$15.50; Belleville, \$16; Peterborough, \$16.25; Oshawa, \$14.75; Toronto, \$14.75; St. Catharines, \$15.50; Hamilton, \$14.50; Galt, \$15.50; \$16; St. Thomas, \$15; Sudbury, \$17; Cobalt, \$17.75; Timmins, \$19; Port Arthur, \$16.50; Fort William, \$16; Winnipeg, \$19.50.

**Wholesale Prices**

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices averaged higher during January

than in the previous month. No. 1 Manitoba northern cash wheat Fort William and Port Arthur basis was up from an average price of 60.3 cents per bushel in December, 1933, to 65 cents in January, 1934. Unsatisfactory crop conditions in the United States and the probability of considerably reduced acreage in the United States for the next crop were mentioned as factors in the advance. In coarse grains western barley was up from an average of 34.2 cents per bushel to 38.8 cents; flax from \$1.42 per bushel to \$1.48; western oats from 29.8 cents per bushel to 33.5 cents and rye from 41.1 cents per bushel to 45.8 cents. Flour at Montreal rose from \$5.20 per barrel to \$5.40. Bran at Montreal was up from \$19.21 per ton to \$20.05. Raw sugar at New York declined 3 cents per hundred pounds to \$1.16, while granulated at Montreal was unchanged at \$6.37 per cwt. Coffee at Toronto advanced from 14.8 cents per pound to 16 cents. Ceylon rubber at New York advanced from 8.8 cents per pound to 9.3 cents. In live stock choice steers at Toronto rose from \$5.09 per hundred pounds to \$5.54 and at Winnipeg from \$3.69 per hundred pounds to \$4.15. Veal calves at Toronto were up from \$6.65 per hundred pounds to \$7.11. Lambs at Montreal declined from \$6.74 per hundred pounds to \$5.69 and at Toronto from

\$7.71 per hundred pounds to \$7.21. Bacon hogs at Toronto were considerably higher, the price being \$8.11 per hundred pounds in January as compared with \$6.48 in December. At Winnipeg the advance was from \$5.73 per hundred pounds to \$7.63. The price of creamery butter at Montreal was up from 25.2 cents per pound to 27 cents and at Toronto from 25 cents per pound to 27.2 cents. Cold storage holdings at the beginning of the year were considerably lower than at the beginning of December, 1933. Fresh eggs at Montreal were down from 37 cents per dozen to 31.9 cents and at Toronto from 32.6 cents per dozen to 29.8 cents. Raw cotton at New York was 1½ cents per pound higher at 11.3 cents. Among the factors influencing this movement were mentioned the greater foreign and domestic demand together with considerably decreased visible supplies. The price of raw wool was 4½ to 5 cents per pound higher at 24-26 cents. In non-ferrous metals electrolytic copper advanced from \$9.07 per hundred pounds to \$9.30 and imported copper wire bars were slightly higher at \$7.98 per hundred pounds. Tin was up from 55 cents per pound to 56.3 cents. Shellac was up from 16.5 cents per pound to 21.3 cents and white lead from \$7.60 per hundred pounds to \$7.80.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes afford information as to significant changes in prices in Great Britain and certain other countries. The authorities for the wholesale prices index numbers are named in all cases. The latest table showing cost of living and wholesale prices index numbers for various countries appeared in "Prices in Canada and Other Countries, 1933," issued as a supplement to the LABOUR GAZETTE, January, 1934.

### Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1924=100, was 61.9 for December, showing no change from the November level, and an increase of 1.9 per cent over the November, 1932, level. A decrease in foods as compared with the previous month was due to a substantial decline in the group for foods other than cereals and meat and fish. Non-foods were slightly higher on the average for the month due to increases in prices of coal, cotton and wool.

The *Statist* index number, on the base 1867-1877=100, was 80.0 at the end of December, an increase of 0.9 per cent for the month.

Increases were noted for all groups with the exceptions of minerals and sundries which were unchanged.

COST OF LIVING.—The index number of the Ministry of Labour, on the base July, 1914=100, was 142 at January 1, a decrease of one point for the month, due to lower food prices, chiefly eggs and butter.

### France

WHOLESALE PRICES.—The General Statistical office index number, on the base 1914=100 (gold index), was 79 for December, an increase of one point for the month. Increases were noted in both national and imported products and included all food groups and textiles.

### Germany

WHOLESALE PRICES.—The Federal Statistical Office index number, on the base 1913=100, was 96.2 for December, an increase of 0.2 per cent for the month. Agricultural products and colonial products were both unchanged, on the whole, while industrial raw materials and semi-manufactured goods, as well as manufactured goods both showed small increases,

**COST OF LIVING.**—The official index number, on the base 1913-1914=100, was 120.9 for December, an advance of 0.4 per cent over the November level. Small increases were noted in food and heat and light, while rent and clothing were unchanged and sundries showed a slight decline.

#### South Africa

**COST OF LIVING.**—The index number of the Census and Statistics Office, on the base 1910=1,000, was 1,280 for November, which is 0.8 per cent higher than the October level.

#### United States

**WHOLESALE PRICES.**—*Bradstreet's* index number (continued by Dun and Bradstreet, Incorporated), which is the sum total of the prices per pound of 96 articles of common

consumption, was \$8.8329 at January 1, a rise of 0.2 per cent over the previous month's level and of 30.1 per cent over January 1, 1933. Textiles and oils were the only groups to show declines from the December 1 level. The coal and coke group was unchanged for the month, but all other groups were higher.

*Dun's* index number (continued by Dun and Bradstreet, Incorporated), which is based on the cost *per capita* of a year's supply of commodities was \$162.309 at January 1, a gain of 1.77 per cent for the month. Increases were recorded in all of the seven groups.

**COST OF LIVING.**—The index number of the National Industrial Conference Board, on the base 1923=100, was 77.3 for December, a decrease of 0.6 per cent for the month, the change being due chiefly to lower food prices.

## FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1933

**T**HE number of fatal industrial accidents (including fatalities from industrial diseases reported with fatal accidents by workmen's compensation boards, etc., as well as fatalities to persons incidental to the pursuit of their occupations) which were recorded in the Department as occurring during the fourth quarter of 1933, was 187, there being 79 in October, 66 in November and 42 in December.

The report for the third quarter of 1933, showing 189 fatalities, was given in the *LABOUR GAZETTE*, November, 1933, page 1139. In the fourth quarter of 1932, 229 fatal accidents were recorded (*LABOUR GAZETTE*, February, 1933 page 241). The supplementary lists of fatal accidents, not reported in time for inclusion, contain 24 fatalities for the first three quarters of 1933 and 2 fatalities for 1932.

In this series of reports it is the custom to record industrial accidents under the dates of their occurrence and fatal industrial diseases under the dates on which they prove fatal.

Reports were received from the Provincial Workmen's Compensation Boards, from the Board of Railway Commissioners of Canada from certain other official sources and from the correspondents of the *Labour Gazette*. Information as to accidents is also secured from newspapers.

Classified by groups of industries the fatalities occurring during the fourth quarter of 1933 were as follows: agriculture, 20; logging, 29; fishing and trapping, 9; mining, non-ferrous smelting and quarrying, 26; manufacturing, 12; construction, 23; electric light and power, 5; transportation and public utilities, 40; trade, 10; service, 13.

Of the mining accidents, 19 were in "metaliferous mining," and 7 in "coal mining."

Of the accidents in manufacturing, 1 was in "vegetable foods, drink and tobacco," 1 in "textiles and clothing," 4 in "saw and planing mill products," 1 in "pulp, paper and paper products," 3 in "iron, steel and products," 1 in "non-metallic mineral products," and 1 in "miscellaneous products."

In construction there were 8 fatalities in "buildings and structures," 1 in "shipbuilding," 11 in "highway and bridge," and 3 in "miscellaneous construction."

In transportation and public utilities there were 17 fatalities in "steam railways," 2 in "street and electric railways," 15 in "water transportation," and 6 in "local transportation."

In trade there were 5 fatalities in "wholesale," and 5 in "retail."

Of the fatalities in service, 4 were in "public administration," 3 in "recreational," 2 in custom and repair," 3 in "personal, domestic and business," and 1 in "professional establishments."

The most serious accident during the period under review occurred on the Salmon River, near St. Martins, New Brunswick, on October 26, when seven log drivers were trapped on a sand bar by rapidly rising waters following a very heavy rain storm and were drowned on attempting to cross the river. Other accidents involving the loss of two or more lives were as follows:—

On November 2, two pulpwood cutters were drowned when a row boat capsized near Hurket, Ontario.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1933.  
BY GROUPS OF INDUSTRIES AND CAUSES

On October 15, two fishermen were drowned at Retreat Cove, Nova Scotia, following an explosion on their boat; and two other fishermen were drowned when their heavy laden dory sank in a storm off Liverpool, Nova Scotia, on November 8.

Three plumbers lost their lives from burns received when a steam pipe exploded at Toronto, Ontario, on November 27.

Two gravel pit workers were killed by a cave-in of gravel near Sonora, Nova Scotia, on October 21.

On October 26, an engineer and his helper were burned when trapped in the flaming engine room of a gas schooner following an explosion, at Great Bear Lake, Northwest Territories.

Two workers on a sand boat were overcome by carbon-monoxide gas from a gasoline pump while pumping water from a hold of a ship, at Port Dalhousie, Ontario, on November 2.

An explosion of oil in an oil company's warehouse resulted in the loss of the lives of two workers, near Toronto, Ontario, on December 12.

*Supplementary Lists of Accidents.*—A supplementary list of accidents occurring during the first three quarters of 1933 has been compiled which contains 24 fatalities, of which 3 were in agriculture, 2 in fishing and trapping, 3 in mining, non-ferrous smelting and quarrying, 2 in manufacturing, 2 in construction, 9 in transportation and public utilities, 1 in trade, and 2 in service. Three of these fatalities occurred in January, 1 in March, 1 in April, 1 in June, 4 in July, 3 in August and 11 in September.

A further supplementary list of accidents occurring during 1932 has been made. This includes 2 fatalities of which 1 was in transportation and public utilities and 1 in service. One of these accidents occurred in September and 1 in October.

## IMMIGRATION TO CANADA DURING THE CALENDAR YEAR 1933

THE accompanying tables issued by the Department of Immigration and Colonization show the nature and extent of immigration into Canada during the calendar year 1933, with some comparative figures for 1932.

\* decrease. † increase.

The total number of immigrants entering the country during the year was 14,382, a decrease of 30·2 per cent from the total number of 20,591 during 1932. British immigrants numbered 2,304 in 1933 as compared with 3,327 the previous year, a decrease of 30·7 per cent. The number from the United States was down from 13,709 in 1932 to 8,500 in 1933, or a decrease of 38 per cent. Northern European immigration was down from 909 in 1932 to 670 in 1933. The number of other races was up from 2,646 in 1932 to 2,908 in 1933, or 9·9 per cent greater.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Time Limit for Action for Damages Resulting from Employer's Negligence

Action for damages resulting from her employer's negligence was brought by a female worker for alleged poisoning of her system contracted while in the employ of a firm of engravers and lithographers in Manitoba in 1927 and 1928. In the course of her work she was required to use a material known as gold dust, which, she alleged, caused her to be affected with an incurable rash or eczema on her face, neck and arms, her health being seriously and permanently affected. The employer, she claimed, had failed to provide a proper place or proper materials or apparatus for the work, including rubber gloves to protect her hands, masks, milk as an antidote, etc. The defence set forth, among other matters, that the action, which was instituted more than two years after the negligence complained of, was barred by the Limitations Act (an Act of James I), and in the alternative by the Limitation of Actions Act (Statutes of Manitoba, 1931, chapter 30, sections 3 (i) *d.*). This special

ground of defence, after hearing by His Honour Judge Adamson, was dismissed by him, but on appeal by the defendants the Manitoba Court of Appeal reversed that decision, and entered judgment that the right of action was barred, the appeal being allowed, with costs.

Chief Justice Prendergast, in the Manitoba Court of Appeal, dealt with the provision of the Limitation of Actions Act. The wording of the section which enumerates the kind of actions falling under the provision (and therefore barred), was susceptible of two interpretations, according as the words "or other injury" were held to be strictly governed by the words which preceded (actions for trespass to the person, assault, battery, etc.), or on the other hand were held to mean that all other classes of injury as well as acts of violence were included. Judge Adamson held the former view, having found for the plaintiff on the ground that the act complained of was not one of violence, and that therefore an action in regard thereto was not barred. The Chief Justice, on the other

hand, pointed out that the actions subject to the Act were stated later in the section to include actions "whether arising from an unlawful act or from negligence," and that therefore the present action was subject to the provision of the Act.

In regard to the further contention of the plaintiff that the action was for breach of contract, as well as in tort, and that therefore it did not come under the section of the Act, His Lordship reached the conclusion that the present action was not also on contract, but wholly in tort, and that it fell under the said section of the Limitation of Actions Act.

Justices Dennistoun, Trueman and Richards concurred with the Chief Justice.

Mr. Justice Robson, in a dissenting judgment, said in part: "The plaintiff's cause of action here is plainly put upon the obligations that arose in her favour from the contract of employment." Referring to Judge Adamson's opinion that the application of the act was limited to actions arising out of injuries wherein violence was a factor, His Lordship continued: "I would add by way of example that a failure of obligation to take care towards a servant cannot be put in the category of actions of negligence such as running-down cases. The term negligence does not strictly apply. It is a case of failure of duty. I agree with the learned Judge's view and merely say that I think the exclusion of this case from clause (d) can be put on either ground. The rule of construction is that statutes of limitation are to be strictly construed and therefore the expression 'other injury to the person. . . arising. . . from negligence' should be restricted to cases having the characteristic of those specifically enumerated in that they are wholly tortious. I think the appeal should be dismissed with costs in the cause to the plaintiff in any event."

*Puls versus Bulman Brothers Limited* (Manitoba) 1934 *Dominion Law Reports*, vol. 1, page 203.

### **Recipients of Unemployment Relief Ineligible for Civic Office**

Under the provisions of the Constitutional Questions Act (Revised Statutes of Alberta, 1922, chapter 89) reference to the Alberta Supreme Court was made by the Lieutenant-Governor in Council to determine the qualifications, as candidates for the offices of mayor and aldermen of the City of Calgary, of persons in receipt of relief under the conditions specified in the order of reference.

Chief Justice Harvey, in giving judgment, said in part as follows:—

"The world-wide unemployment situation, with the distress resulting or likely to result therefrom, is one known to all and of which the Courts will take judicial notice. This situation is being met in the City of Calgary by an arrangement between it and the Provincial and Dominion Governments under which each bears one-third of the burden, the administration of the scheme being conducted by the city.

"Before relief is granted an application in writing is made and in the application is the statement by the applicant that he is unable to pay for the relief. After investigation, if it is found that the applicant is deserving, he is given an order for supplies, etc., of a definite value. No further application is made but each month the applicant is required to make a declaration showing the continuance of his need and the orders are given as required.

"By another arrangement between the three contributing parties a work scheme was established in 1931 which apparently continues, under which 'the recipients of relief are required to work off by creative work the amount or value of the relief granted at a fixed rate of 50 cents an hour.' This requirement of the performance of labour is not applied to certain recipients of relief in special circumstances, nor is it applied to any recipient until he has received relief to the extent of \$30 or \$40 in value. It is stated that recipients are expected to do the work required, if physically able, and if they do not, the amount of relief is decreased but not completely cut off. . . .

"Section 4, (1) of the Charter of the City of Calgary provides *inter alia* that, 'Any person . . . having any unsettled or disputed account with or claim against the City . . . or any person having by himself or through his partner any contract whatsoever or any interest in any contract with or for the City, either directly or indirectly, shall not be capable of being elected or serving as Mayor or Alderman of the said City.'

"It is urged that, on the facts stated, a contract can be implied between the city and the recipients of relief to do the necessary work to repay the amount advanced, but I think this argument fails, for, though it appears that they are expected to work, an expectation by one party is quite different from an agreement by another and there is nothing to show that the recipients received the relief with such knowledge of the city's expectation as would justify the inference that they undertake and bind themselves to do the work. The fact also that all the city

does upon the failure or refusal to do the work after long continuance is only to reduce the amount of relief, seems to support that view. But the provision that a person is disqualified from becoming or being mayor or alderman if he has an unsettled account with or claim against the city seems to have an important bearing on the case. Both in this provision and in that respecting contracts the reason for disqualification is plainly seen to be in the fact that such a person may find his interest and duty in conflict if he should hold the office. Such being the case in other jurisdictions it has been held that the broadest meaning should be given to the word 'contract' in similar statutes for the purpose of giving effect to the evident purpose of the legislation. In Harrison's Municipal Manual, 5th ed., p. 63, it is stated that the object 'is clearly to prevent all dealings on the part of the council with any of its members in their private capacity, or, in other words, to prevent a member of the council, who stands in the situation of a trustee for the public, from taking any share or benefit out of the trust fund, or in any contract in the making of which he, as one of the council, ought to exercise a superintendence'....."

His Lordship cited various cases bearing upon the point at issue, and concluded as follows:

"The applicant for relief is making a claim against the city, if not a legal one certainly a moral one, if not of right, certainly an appeal to its humanity and charity. It is clear that if he were in the position of considering the merits of his application as an alderman he could not consider it apart from his own interest in it and he would be in a position in which his duty and interest came in conflict. It will be seen that it is not because he is a recipient of relief but because he is an applicant for relief that this situation would arise and it is quite apparent that at any time the question of revision of conditions and terms upon which relief may be granted may arise. As already stated the application is a continuing one and the claim under it is an unsettled one because it may be necessary to reconsider at any time the conditions upon which it may require to be dealt with.

"For the foregoing reasons and under the principles to be applied it seems that an applicant for relief is one who has a claim against the city within the meaning of the section respecting qualification. It will be seen that since it is the outstanding application for relief which disqualifies rather than the receipt of such relief and that the question of repayment in work has no bearing, no

categorical answers can be made to the questions submitted, but they are sufficiently answered in substance by what has been said."

Justices Clarke, Mitchell and Lunney concurred with the Chief Justice.

Mr. Justice McGillivray in the course of a dissenting judgment said:—

"This city contributes one-third of the monies expended for relief within its boundaries. It is therefore not difficult to understand the point of view of taxpayers who assert that those on relief should have no say as to the distribution of relief. On the other hand I experience no difficulty in understanding the point of view of those who state that men or women, who, through no fault of their own, have suffered the pangs of hunger and the pain of cold, are able to speak with the authority born of personal experience as to what are the actual needs of those who are in destitute and necessitous circumstances and so should be heard at the council table at which decisions as to relief are made. I repeat that it is easy to understand each of these points of view which I mention for the sole purpose of emphasizing at the outset that such considerations have no place in a Court of Law when the answers to the questions propounded by the Lieutenant-Governor-in-Council, depend solely upon the interpretation of one section of the statute known as the Charter of the City of Calgary. This Court is not concerned with the wisdom or lack of wisdom of those who enacted the Calgary City Charter. It is the simple duty of this Court to so interpret that Charter as to give effect to the intention of the Legislative Assembly that enacted it. . . ."

After a discussion of various precedents His Lordship said in conclusion:—"It may or may not be wise to have anyone on relief as mayor or member of the city council; I express no opinion as to this; this is wholly a matter for the consideration of the members of the Legislative Assembly. I do not think that when this section was passed the members of the Legislative Assembly could conceivably have had in mind moral claims arising out of a depression, not then in existence and which could not have been forecast; at any rate the words employed are clear and in my opinion incapable of supporting any other view than that the word 'claim' is used in its ordinary and natural legal sense. If I am right in the views expressed, it follows that persons on relief are eligible as candidates for the offices of mayor or alderman. I would so hold and I would answer the questions referred accordingly."

### Master may not retain Wages earned when Servant breaks Engagement

A maid servant, employed at a monthly salary of \$15, left her position six days before the first month had expired. She claimed \$11.50 as owing from her employer in respect to the portion of the month she worked. The employer refused payment on the ground that the plaintiff had left without notice or reason before the period of the contract had expired, and he submitted that she was not entitled to any wages. Chief District Magistrate Roy refused the claim on that ground, but on appeal the Superior Court at Quebec reversed that decision, holding that the master could not refuse to pay his domestic for the time she had actually worked under the pretext that she left without completing the period of her engagement. "No law or principle," the Court stated, "authorizes the master—who does not even allege that he sustained any damage—to derive a pecuniary profit from the domestic's leaving." The defendant was ordered to pay arrears of wages, with interest and costs.

*Mlle. Gauvin vs. Richard and Richard* (Quebec), 1933, *Rapports Judiciaires de Québec (Cour Supérieure)*, vol. 71, page 517.

### Public Interest and Private Undertakings in United States

The United States Department of Labor recently published Bulletin No. 592 in the "Labour Laws" series, containing Decisions of Courts and Opinions affecting Labour, 1931 and 1932. An important case outlined is one in which the United States Supreme Court, in March, 1932, declared unconstitutional a law passed by the State of Oklahoma to regulate the retail ice business so as to limit competition and production and thereby prevent as far as possible irregularity of employment. The main question at issue was whether the business in question was so charged with a public interest as to justify the restriction placed by the Statute. The majority of the Court held the Statute to be an unwarranted interference with private business, and affirmed the decision of the lower court declaring the Statute invalid.

Mr. Justice Brandeis delivered a dissenting opinion in which he was joined by Mr. Justice Stone. So far as concerned the power to regulate, the minority opinion contended that there is no difference "between a business

called private and one called a public utility or said to be affected with a public interest." The source in every case was the police power. "Increasingly, doubt is expressed whether it is economically wise or morally right that men should be permitted to add to the producing facilities of an industry which is already suffering from over-capacity. In justification of that doubt men point to the excess capacity of our productive facilities resulting from their vast expansion without corresponding increase in the consumptive capacity of the people. They assert that through improved methods of manufacture, made possible by advances in science and invention and vast accumulation of capital, our industries had become capable of producing from 30 to 100 per cent more than was consumed even in days of vaunted prosperity; and that the present capacity will, for a long time, exceed the needs of business." In the opinion of many economists, unless production and consumption are more nearly balanced, the evils of irregularity in employment cannot be overcome. While plans for proration and stabilization have been attempted, such as the La Follette proposal, the Swope plan, and the Davis-Kelly bill to regulate the soft-coal industry, it is the opinion of thoughtful men, Mr. Justice Brandeis said, "that all projects for stabilization and proration must prove futile unless, in some way, the equivalent of the certificate of public convenience and necessity is made a prerequisite to embarking new capital in an industry in which the capacity already exceeds the production schedules."

Mr. Justice Brandeis could not believe that "the framers of the fourteenth amendment, or the States which ratified it, intended to deprive us of the power to correct the evils of technological unemployment and excess productive capacity which have attended progress in the useful arts." There must be power, he said, "in the States and the nation to remould, through experimentation, our economic practices and institutions to meet changing social and economic needs."

Early in 1934 the United States Supreme Court affirmed the constitutionality of the Minnesota Moratorium law, upholding the power of the State to defer mortgage foreclosures on the theory that right of private individuals to contract is subject to power of government for "use of reasonable means to safeguard the economic structure upon which the good of all depends."

[NUMBER 3

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

A LARGE increase was noted in industrial employment in Canada at the beginning of February, according to returns received by the Dominion Bureau of Statistics from 8,463 firms, each with a minimum of fifteen employees. The staffs of these firms on February 1 aggregated 846,943 persons, as compared with 820,998 on January 1. This increase of 25,945 workers or 3.1 per cent was the largest noted on February 1 in the years of the record, which commenced with 1921; it compares favourably with the declines recorded at the beginning of February in the preceding three years. The index, based on the 1926 average as 100, rose from 88.6 on January 1 to 91.4 at the beginning of February, as compared with 77.0 at the same date in 1933. On February 1 in the previous twelve years it was as follows:—1932, 89.7; 1931, 100.7; 1930, 111.6; 1929, 110.5; 1928, 102.0; 1927, 96.6; 1926, 91.8; 1925, 87.1; 1924, 91.7; 1923, 90.6; 1922, 79.9; 1921, 91.2. The returns are representative of employment in all industries except agriculture, fishing, hunting and highly specialized business.

At the beginning of February, 1934, the percentage of idleness reported to the Department of Labour by local unions stood at 21.2 contrasted with 21.0 per cent at the beginning of January, 1934, and with 25.5 per cent at the beginning of February, 1933. The percentage was based on the reports compiled from 1,728 labour organizations, with a total of 149,630 members.

Reports received from the offices of the Employment Service of Canada indicated a decline in the volume of business transacted in January, 1934, when a comparison was made with the preceding month, but a gain over January a year ago, these comparisons being based on the average daily placements effected during the periods under review, the highway division of construction and maintenance being mainly responsible for the change in each case. Vacancies in January, 1934, numbered 37,856, applications 68,442, and placements in regular and casual employment 36,215.

In retail prices the cost per week of a family budget of staple foods, fuel and lighting and rent, contrary to the usual movement in recent years at this season, was higher in February at \$16.09 as compared with \$15.95 for January. The increase was due to the higher cost of foods, chiefly meats, butter and potatoes, which more than offset a seasonal fall in the cost of eggs. Some comparative figures for earlier dates are \$15.41 for June, 1933, which was the low point since 1916; \$15.61 for February, 1933; \$22.12 for February, 1930; \$21.87 for February, 1926; \$21.07 for February, 1922; \$26.92 for July, 1920 (the post war peak); and \$14.54 for February, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics continued to advance being up from 70.6 in January to 72.1 in February. Figures for certain earlier dates are 63.6 in February, 1933 (the low point); 93.9 in February, 1930; 102.2 in February, 1926; 98.3 in February, 1922; 164.3 in May, 1920 (the post war peak); and 64.8 in February, 1914. The advance in February this year as compared to the previous month was due mainly to higher prices for live stock, meats, butter, eggs, grains and certain milled products.

The table on page 216 gives the latest statistics available reflecting industrial conditions. The index of the physical volume of business was slightly higher in January than in the previous month. Of the main factors in this index mineral production, construction, electric power output, carloadings and exports were higher after the necessary adjustments for seasonal variations, while manufacturing, trade employment and imports were lower. As compared with a year ago all these factors were substantially higher. The production of flour, newsprint, footwear, and automobiles in January was higher than in the previous month and also higher than in January, 1933. Statistics available for February show a continuation of the upward movement of wholesale prices while employment also was at a higher level than in the previous month. Carloadings were higher both as compared with January and as

compared with one year ago. Sugar manufactured during the first two months of the present year was eleven per cent lower than for the corresponding period last year.

The time loss due to strikes and lockouts during February, as well as the number of disputes and the number of workers involved, showed decreases from the figures for January. A large part of the time loss in February was due to a strike of loggers in Vancouver Island, B.C., whereas most of the time loss in January was due to two strikes of cloak and suit makers and dressmakers in Toronto. As compared with February, 1933, a considerable increase in the number of disputes appears, with an appreciable increase in the number of workers involved but a reduction in time loss, strikes of cloak and suit makers in Toronto and Montreal and strikes of copper miners at Anyox, B.C., and coal miners at River Hebert, N.S., causing considerable time loss a year ago. There were in existence during the month twenty-one disputes, involving 5,462 workers, and resulting in a time loss of 30,690 working days, as compared with twenty-three disputes in January, 1934, involving 6,038 workers and resulting in a time loss of 47,968 working days. In February, 1933, there were on record eight disputes, involving 4,521 workers and resulting in a time loss of 54,730 working days. At the end of the month there were on record eight disputes, involving approximately 2,900 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected, but which had not been called off by the unions.

#### **Appeal from decision of Compensation Board in New Brunswick.**

Among the Legal Decisions Affecting Labour in this issue is the case in which the Supreme Court of Canada allowed an appeal from the judgment of the New Brunswick Supreme Court affirming a decision of the Workmen's Compensation Board. The Workmen's Compensation Act of New Brunswick provides in section 35, subsection (1): "An appeal shall lie to the Supreme Court, Appeal Division, from any final decision of the board upon any question as to its jurisdiction or upon any question of law, but such appeal can be taken only by permission of a judge of the Supreme Court, given upon a petition presented to him within fifteen days after the rendering of the decision, and upon such terms as said judge may determine."

In the present case the question at issue concerned the interpretation to be placed upon the expressions "mine rescue," "accident arising out of and in the course of their employment," and the effect of an emergency as enlarging the scope of "employment."

#### **Work of the National Research Council**

The activities of the National Research Council during the fiscal period 1932-33, are reviewed in its 16th annual report, submitted to the Committee of the Privy Council on Scientific and Industrial Research. The establishment of the National Research Laboratories at Ottawa was an event of unusual significance during this period. Notwithstanding the restrictions imposed by the condition of the national finances notable progress was made in a considerable number of investigations, many of these being directly in the industrial field. The major part of the work is now carried on in the Council's own laboratories, but many investigations are carried on under associated committees, assisted researches and scholarships. During the year the association of private enterprise with the Council was extended, and financial contributions to the support of the work of the Council were received from industries, including the laundry industry and the magnesian products industry. The report calls attention to the growing demand for the extension of the Council's services, and a program of research is being planned, to be undertaken when the finances permit. Particulars are given of the work carried on in the various laboratory divisions—biology and agriculture, chemistry, physics and engineering, and research information, and of the activities of the Associate Committee. The *Canadian Journal of Research*, established by the Council in 1929 as a medium for the publication of the results of Canadian research, was noted widely in the scientific press of other countries during the year.

The work of the Council is stated to be hampered to some extent by the problem of staff: "Without question, fifty additional investigators could be put to work in the Council's laboratories on investigations already undertaken. It has been one of the tragedies of the present depression that a method has not been found of meeting this need by the employment of the highly trained investigators whose services are now being lost to Canada. A distressing feature of the year under review has been the number of those who have unsuccessfully sought employment under the auspices of the Council."

#### **Resolution of Quebec Legislature on Old Age Pensions**

The Quebec Legislature, on February 15, rejected a resolution proposed by Mr. Guertin, of Hull, inviting the government to introduce, during the present session, legislation giving effect within the province to the federal Old

Age Pension system. As a substitute, the following resolution, proposed by Hon. Mr. David, seconded by Hon. Mr. Mercier, was adopted by 53 to 9 votes:—

"Whereas the majority report of the Quebec Social Insurance Commission recommends that the province, whenever it is possible, accept as a temporary and transitory measure, the putting into operation of the Federal Old Age Pension Act. This House, whereas it deems it inopportune to accept temporarily and in a transitory manner a legislation where perils, dangers and incertitudes are evident; whereas the Government on account of its financial position deems it unwise to assume and to force the municipalities to assume the extraordinary expenditures which would follow the acceptance of the federal law concerning the Old Age Pension; whereas the Government to-day more than ever must see that its legislation be characterized by an increased foresight and prudence; whereas homes for the aged and hostels have been encouraged through substantial subsidies of the Government and are developing so as to receive old married couples and allow them to continue their life in common; express the wish that the Government continue its encouragement by means of subsidies to homes for the aged and hostels and so acknowledge the services that have been rendered to the province by our charitable and religious institutions."

#### **Enforcement of Lord's Day Act in Quebec**

The Quebec Legislature adopted the following motion on February 22:—

"That this House, whereas on March 28, 1931, this House passed the following resolution:

"That this House expresses the opinion that the continued and general violation of the Lord's Day Act, besides causing overproduction, tends always to diminish respect for law and authority, civil as well as religious, and to favour the spread of Bolsheviki ideas; that this House thanks the Government for having adopted the request which was made to it to have the said law better observed, and for having appointed two inspectors for that purpose; that, moreover, it considers that the Government should appoint as many qualified inspectors reasonably remunerated, as required to have this fundamental law respected, and that it respectfully requests the government to prosecute the transgressors with more severity than ever."

"Whereas the Lord's Day Act is not yet observed as it should be; whereas, to secure the desirable results it would be necessary to appoint a sufficient number of competent and reasonably remunerated inspectors; whereas,

good inspectors of industrial establishments would be able to look after the security of the employees in factories and could give the necessary attention to the observance of the Lord's Day Act;

"Respectfully invites the Government to appoint a sufficient number of competent and remunerated inspectors, to exercise proper supervision, to secure the protection of the employees in factories, as well as insure the observance of the Lord's Day Act."

#### **Suggestions for maternal welfare in Canada**

"The Future of Maternal Welfare in Canada" is the subject of a paper by Dr. Grant Fleming, of McGill University, Montreal, appearing in the January issue of the *National Health Review*, the quarterly publication of the Department of Pensions and National Health. Dr. Fleming discusses the extent of the provisions which are now made for medical care, and finds that while valuable educational work is carried on by the various Health Departments, there is a marked deficiency in medical aid of a more direct and practical character. He concludes with the following suggestions:—

"Although the responsibilities of the public health authority may be limited in the actual carrying out of the maternal hygiene program, it does appear that the public health authority should give leadership in devising a plan suitable for cities, towns and rural areas. There is need in Canada for the establishment of standard methods, based on our own conditions, to serve as a guide for the establishment of sound and adequate public health programs and for a definition as to the responsibilities of the various governments. Provincial health departments should have a program of maternal hygiene to offer for rural areas in particular, and might there not be a common plan for all provinces established in joint conference with other bodies directly interested, such as the Canadian Medical Association and the Victorian Order of Nurses for Canada, under the leadership of the Department of Pensions and National Health? The future of maternal welfare in Canada depends upon our ability to devise a plan which will secure medical and nursing care for all mothers, under our present system of medical practice or under any new system."

#### **Proposed measures for farm relief in Saskatchewan**

The Speech from the Throne at the opening of the Saskatchewan Legislature on February 15 referred to the general difficulties of the time and continued: "Our province, in addition, has had to face more than its fair

(2) For group figures, see articles elsewhere in this issue.

(3) Figures for end of previous month.

(4) Figures for four weeks ending February 24 1934, and corresponding previous periods.

(5) Sugar production given in periods of four weeks ending February 24 and January 27, 1934; December 30, February 25 and January 28, 1933, and December 31, 1932.

share of adversity owing to another disastrous crop failure covering a large area and affecting nearly 40,000 of our farmers and arising from drought along with serious inroads of insect pests, with the result that to-day approximately 180,000 men, women and children on our farms have been and are being provided with assistance by my Government acting through the Provincial Relief Commission. In order to meet this situation, my Government considered it advisable to retain the services of this Commission which was set up in the fall of 1931 and which has functioned continuously since that time. . . .

"During the past year a considerable number of new settlers have been assisted in becoming established on land in the northern part of our Province and this policy will be continued during the present year. Some 4,000 settlers with their families have gone into our great north land during the past four years, thereby increasing the population of that section of the Province by at least 20,000. Believing that there are many occupied farm lands in the Province which are not capable of yielding a reasonable return to farmers, and that lands which should be used only for range purposes have been turned into farms during wet years, with the result that during dry years numerous farm families have been struggling against hopeless obstacles, my Government proposes to continue its program of investigation in order to ascertain the possibilities of land in the different areas of the Province, for crop, pasture or forest purposes, with a view to directing the expansion of agriculture in those areas best suited for farming purposes and encouraging the abandonment of economically unproductive lands, to the end that agriculture may be established on a sounder economic basis." It was intimated that "operations in the construction and maintenance of highways will be undertaken during the coming season in order to provide employment for many of our farmers and others in need of assistance."

Reference was made in the Speech to the efforts made by the Government to develop the growth of fruit in the province, and to a definite forestry policy, to be spread over a sixty to seventy-five year period, which is to be studied by a permanent Forestry Commission. The government, moreover, plans a survey of natural water basins and depressions on rivers and water courses in the drought areas, and will submit, as part of a national public works program during the current year, the construction of dams where possible.

### **Medical aid for sailors in merchant service**

A new International Code of Signals, compiled in seven languages (English, French, German, Italian, Japanese, Norwegian and Spanish) and covering both radio and visual signalling, came into force for ships of all nationalities on January 1, 1934. This Code, superseding one which has been in use for over thirty years and was devoted to flag signals only, is the work of an international committee set up in 1928 under the auspices of the British Government, in pursuance of recommendations of the International Radio-Telegraph Conference held in Washington in 1927.

A novel and important feature of the Code is that it contains a special medical section embodying a complete case-stating system for medical consultations at sea by radio signalling in cases of illness or injury on board ship, especially ships not carrying a ship's doctor, which constitute the great majority of the merchant vessels of the world. This section is designed to overcome the difficulties which have not infrequently been experienced in the past when, in a case of serious illness or injury occurring at sea in his ship, the master has sought advice by wireless from any ship within range carrying a doctor—difficulties due to the master's not being aware of the precise details required by the doctor to enable him to form a correct diagnosis and to give the proper advice, and to complications caused by language differences between ships of different nationality.

### **Milk as a public utility at Winnipeg**

The events leading to the placing of the milk business at Winnipeg under the control of the Public Utilities Board are outlined by Mr. Peter MacDonald in an article in the March issue of the *Country Guide* (formerly the *Grain Growers' Guide*). The Manitoba Legislature, in May, 1932, amended the Public Utilities Act by giving the Board authority to intervene in the event of an emergency arising in the milk market. This action was taken in consequence of the disturbed condition of the industry following the sudden fall in the price of milk. "In 1929," Mr. MacDonald states, "producers were getting \$2.45 per hundred pounds for milk. The price dropped first to \$2.15, then slipped down successively to \$1.80, \$1.40, \$1.20, on down to an even dollar, finally bogging down to a low of 93 cents. Part of this was no doubt inevitable. As the urban payroll shrank, milk prices were sure to skid some, but a new and violently disturbing factor

entered into the retail milk business. One of the large store chains announced its intention of selling milk a cent a quart cheaper than anyone else, and immediately the battle was joined. It was purely a price war between distributors, yet the producers paid the shot. . . .

"Finally on September 12, 1932, a date that may become historic in the history of agricultural marketing, the board took the plunge. Milk for the first time, took its place with gas, electricity, and transportation as a public utility. The board posted its retail and wholesale prices below which it might not be sold. The price set for payment to farmers was \$1.55 a hundred pounds. The wagon distributors were allowed 10 cents. Milk over the counter was to be sold for not less than eight cents. . . . The measures of regulation ordained that the distributors should keep a scrupulous record of all milk bought and sold in every price classification. Quotas were set for every producer. Virtually Winnipeg's supply of milk was handed over as a monopoly to those farmers then engaged in the business, the conditions imposed on that monopoly, as with every other public utility, being strict supervision of price."

"Winnipeg's experiment," the writer states, "has attracted attention far and wide. At least two other Canadian cities have already copied it. The Province of Quebec is interested and a continuous flow of inquiries comes from the States. The administrators in Winnipeg speak with considerable reserve as to what may be accomplished elsewhere. They point out that their success may perhaps be due to the isolation of Winnipeg in respect to fluid milk. . . . In a whole milk sense the Red River Valley of Manitoba is an island. If it can work out an equation between home supplies and consumption its dairymen can conduct their business in reasonable security, for there is small danger of an inrush of supplies from other sources."

#### **Relief Settlement Plan, 1932-3**

ment on relief land settlement during that period:

"In the course of settlement activities, it was the experience of the department, the provinces and the railways that there were many families in urban centres with previous farm experience but absolutely without personal funds, desirous of settling on land where they would have an opportunity of self-dependence. Having regard to this situation the federal Government early in May, 1932, offered to all provinces the Relief Settlement

Plan whereby public monies that would otherwise be spent in the form of direct relief to maintain families in comparative idleness in urban centres would be applied to assist selected families to settle on land where they could contribute to their own maintenance and eventually become self-supporting.

"Agreements have been entered into with all provinces with the exception of Prince Edward Island providing for a Dominion non-recoverable expenditure of one-third of an amount not to exceed \$600 per family for the purpose of providing modest equipment and subsistence for a two year period.

"Relief land settlement is essentially subsistence farming. It is primarily an unemployment relief measure—not a colonization scheme—but it is anticipated the plan will be so administered by the respective provinces that a reasonable measure of permanent settlement will result. Under the terms of the agreement the province is responsible for the administration of relief settlement, including selection of families and suitable lands and the settlement of families thereon.

"Advisory Committees have been appointed in all provinces participating in relief settlement, the members of the committee including a colonization representative of the department and a representative of the Colonization Department of the Canadian Pacific and the Canadian National Railways. During the past year, 1,563 families with 6,951 dependants and representing 25 nationalities were settled in the following provinces: Alberta, 51; Saskatchewan, 395; Manitoba, 207; Ontario, 210; Quebec, 523; and Nova Scotia, 177. Lands used for settlement are mainly of two classes—Provincial Crown lands and privately owned farms that may be acquired with no down payment and on long terms.

"Agreements between the Dominion and provinces are effective until March 31, 1934, and settlement is proceeding in the following seven provinces: British Columbia, Alberta, Saskatchewan, Manitoba, Ontario, Quebec, and Nova Scotia."

The month of February, with 3,930 accidents, shows the largest number of accidents reported to the Ontario Workmen's Compensation Board during any month since February of 1932, when there were 4,023 accidents. This compares with 3,807 accidents during January, and 2,733 during February, of 1933. The fatal cases reported during February numbered 17, as against 16 in January. The benefits awarded amounted to \$244,140.11, \$186,772.32 of this being for compensation and \$57,367.79 for medical aid. The benefits awarded during January amounted to \$346,370.01, and during February a year ago, \$295,771.11.

**Conditions of industrial home work in New York State**

A memorandum dealing with the conditions of industrial home work in New York State was submitted to the legislature recently by the Industrial Commissioner, Elmer F. Andrews, in support of an Industrial Home Work Bill now under consideration. The proposed law would provide (1) licensing of all homework manufacturers and contractors upon payment of fees to be used in defraying the expense of enforcing the law; (2) licensing without charge of places where homework is done; (3) Issuance without charge of certificates to all homeworkers. Under the terms of the bill, the regulation of sanitary conditions in places where homework is carried on would be in the hands of the local health authorities. The State Labour Department would be charged with safeguarding minimum wage and child labour standards, as required by the Labour Law.

The Industrial Commissioner said: "Passage of the bill is a necessary first step in the enforcement of the Minimum Fair Wage Law for the protection of more than 30,000 women and children employed in industrial homework in the State. Their weekly earnings, which averaged \$6.19 in the prosperous year of 1928, have been cut to as little as 25 cents a day for 14 hours work. Skilled embroidery workers are working long hours to earn from 50 to 75 cents a day. Under existing law, the Department of Labour has control over industrial homework only when it is performed in dwellings housing three or more families. Most of this work is now done in one and two family houses, many of which are in small towns and villages. Terms are dictated by the employer, often by mail, without any sort of regulation as to pay, hours or working conditions.

"Industrial homework will be either abolished or humanized by the payment of decent wages in the near future. In addition to its shameful exploitation of isolated and unorganized women and child workers at coolie wages, it constitutes a direct menace to the wages of factory workers, to industries operating in factories, to those homework manufacturers and contractors who pay fair wages, and to the industrial equilibrium of the State. Homeworkers employed by contractors paying decent wages are threatened by the helpless cut-throat competition of other workers, who, in many instances, are forced to apply for relief money to make up the difference between their pitiful earnings and the bare cost of food and shelter."

**Industrial accidents and physical condition of workers**

Increases in industrial accidents reported to the Ontario Workmen's Compensation Board in January as compared with the same month in 1933, are to be attributed mainly to increases in the number of workers in employment. While this is true, however, a recent bulletin of the Industrial Accident Prevention Association calls attention to a contributory cause of accidents under present conditions: "It is a fair statement that men now returning to industry have lost some of their former skill, that in many instances they are below par physically, and that industrial executives must recognize this condition and pay for it in one of two ways—either by permitting a certain slowness to exist while men are rehabilitated, or by paying an excessive accident cost."

The same bulletin points out that a large proportion of compensation claims arise from a limited number of plants which are deficient in safety provisions and therefore throw an unfair assessment burden on plants with a good record. To remedy this unsatisfactory situation a field force of the organization is now engaged in a survey of industry in the province, special attention being directed to the following points:—

(1) Every employer under compensation should have First Aid as required by Regulation 88 of the Workmen's Compensation Board and should provide First Aid service during all employment hours. There should be an enforced rule requiring the reporting of all injuries, including minor, for First Aid. There should be a proper record of First Aid treatments. Where injuries are sufficiently serious to warrant medical attention the employer should make certain that he is securing the services of a reliable physician, preferably one with surgical training. There should be follow-up of all accident cases to make certain that the injured worker is receiving proper medical attention, if any, and that he is returned to work as soon as fit.

(2) All mechanical hazards should be guarded.

(3) Superintendents and foremen should exercise close supervision of work methods to insure safe practices.

4. Managers should know something of the accident experience, including accident frequency, compensation assessments, and awards for compensation and medical aid.

Statistics of industrial accidents in Canada in 1933 are given in this issue.

### Governments and co-operation in Canada

Referring to the unfriendly attitude which, it is claimed, has been taken by various European governments towards the co-operative

movement, the *Canadian Co-operator*, February, 1934, pays tribute to the recognition that has been accorded to the movement by the various governments in Canada, as follows:—

"The Federal Parliament has given statutory recognition of the fact that the net revenues of co-operative societies in trading relations with their members are not profits or taxable income, but savings made on their behalf. Consumers' and producers' societies composed of farmers and fishermen doing business with non-members not in excess of twenty per cent of that done with members are exempt from income taxation. There seems no logical reason why the statutory exemption should not be applied to co-operative societies of working men and of people following other occupations than those above mentioned. This, no doubt, will be corrected in due course.

"Some provincial governments have gone further. They have provided facilities for the encouragement of co-operative practice. Credit therefor is not confined to any one political party. For many years under both Liberal and Conservative governments, the Saskatchewan Department of Agriculture, through its Co-operation and Markets Branch, has spent large sums annually in the encouragement and assistance of co-operative societies, and people interested in co-operative organization. The Co-operative Union of Canada has long maintained close co-operation with the branch, and is much indebted to its officers for their cordial and helpful assistance at all times.

"Under the Farmers' Government in Manitoba the Registrar of Co-operative Associations, who is also secretary of the Co-operative Marketing Board, has, for some years, given co-operators sympathetic and much-appreciated aid, and has co-operated with the Union in that province. In Alberta the Farmers' Government has an Adviser of Co-operative Activities, and in Quebec the Department of Agriculture, under a Liberal Government, has an Inspector of Co-operatives. Even in industrial Ontario, under a Conservative Government, a Co-operative and Markets Branch of the Department of Agriculture was maintained for many years, although its activities are now included in the work of the Crops, Co-operation and Markets Branch."

### Agricultural Co-operation in Quebec

The *Statistical Annual of Quebec* for 1933, recently published, gives the following account of agricultural co-operative societies in the

province:—

Legislation on agricultural co-operative societies dates from 1908. It was amended on several occasions, but the most important changes were made in 1930. The societies are composed of at least 25 members called "producer shareholders"; each member must subscribe a minimum of five or ten shares of a value of \$10, and he enters into a contract, for a period of at least three years, to sell or buy certain named products through the medium of the society. Ordinary shares of co-operative societies return no dividend. The surplus, less deduction made for reserves, is distributed among the member shareholders in proportion to the extent of their business with the society. The co-operatives may also have as "affiliated" members producers who pay an annual contribution of \$2. The duties and privileges of affiliated members are determined by the directors; they have not the right of voting at general meetings.

In 1932, the Department of Agriculture received reports from 135 such societies, including a provincial federation for the purchase and sale of all agricultural products, five provincial and thirty district societies with varied activities, the remainder being local and for special purposes. The total sales effected by the co-operatives in 1932 was \$7,093,305, those of the Co-operative Federation being over \$8,850,000. The provincial government makes societies complying with certain conditions a grant of 1½ per cent of their sales. In 1932, sixty-five co-operatives benefited by this grant, the central society receiving 1 per cent of its total sales. The number of members of co-operative societies in the province advanced steadily from 14,558 in 1929 to 19,492 in 1932.

The Saskatchewan Teachers' Alliance, the Saskatchewan Educational Association, and the Saskatchewan Rural Teachers' Association, professional organizations of educationists in Saskatchewan, now form one body, known as The Saskatchewan Teacher's Federation.

The Alberta School Trustees Association, at a convention held at Calgary in February, adopted a resolution asking the provincial government to establish a minimum salary for school teachers of \$600 a year. At present the minimum is \$540, but Boards of School Trustees may, with the permission of the Department of Education, pay less than that amount.

## RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

A BOARD of Conciliation and Investigation was established by the Honourable W. A. Gordon, Minister of Labour, on February 16, 1934, to deal with a dispute between the Canadian National Telegraphs and certain of its commercial telegraphers in the Maritime Provinces. Two groups of employees are concerned in the dispute, one group comprising a number of telegraphers commonly known as "the North Sydney Group of operators", and the other group comprising members of the Commercial Telegraphers Union of North America. When the Canadian National Telegraphs acquired the property of the Western Union Telegraph Company in the Maritime Provinces in July, 1929, certain cable operators employed by the Western Union Cable Company at North Sydney in connection with land line commercial telegraph

activities, were absorbed into the land line service of the Canadian National Telegraphs, and the present dispute relates to the matter of wages and seniority rights of this "North Sydney Group."

The Board was established by the Minister under Section 65 of the Industrial Disputes Investigation Act, on his own motion and without formal application. The personnel of the Board is as follows: His Honour Judge R. H. Murray, of Halifax, N.S., Chairman, appointed by the Minister in the absence of a joint recommendation from the other Board members; Mr. Hector McInnes, K.C., of Halifax, nominated by the company; and Mr. C. W. Lunn, of Truro, N.S., appointed by the Minister without recommendation, the two groups of employees having failed to agree upon a nominee.

## STRIKES AND LOCKOUTS IN CANADA DURING FEBRUARY, 1934

THE following table shows the number of disputes, workers involved and time loss for February, 1934, as compared with the previous months and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Feb., 1934.	21	5,463	30,690
*Jan., 1934...	23	6,038	47,968
Feb., 1933	8	4,521	54,730

\* Preliminary figures

The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

The number of strikes and lockouts during February, as well as the number of workers involved and the time loss incurred, showed decreases from the figures for January. A

large part of the time loss in February was due to a strike of loggers in Vancouver Island, B.C., whereas most of the time loss in January was due to two strikes of cloak and suit makers and dressmakers in Toronto, Ont. As compared with February, 1933, a considerable increase in the number of disputes appears, with an appreciable increase in the number of workers involved, but a reduction in time loss, strikes involving cloak and suit makers in Toronto and Montreal, copper miners at Anyox, B.C., and coal miners at River Herbert, N.S., causing considerable time loss a year ago.

Nine disputes, involving approximately 1,257 workers, were carried over from January, but one of these, involving broom factory workers in Vancouver, B.C., commencing January 27, 1934, was not reported in time for inclusion in the February issue of the LABOUR GAZETTE. Twelve disputes commenced during February. Of these twenty-one disputes, thirteen terminated during the month, seven in favour of the workers involved, two in favour of the employer concerned, and compromise settlements were reached in four cases. At the end of February, therefore, there were eight disputes in progress recorded as strikes or lockouts, namely: loggers, etc., Campbell River, B.C.; boys' clothing factory workers, Toronto, Ont.; knitting factory workers, Winnipeg, Man.; shingle weavers, Port Moody, B.C.; broom and brush factory workers, Vancouver, B.C.; coal miners, Stelarton, N.S.; shoe factory workers, Toronto,

Ont., and furniture factory workers, Kitchener, Ont.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information had been received indicating that employment conditions are no longer affected, but which the unions concerned have not declared terminated. Information is available as to four such disputes, namely: photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; lithographers, Toronto, Ont., April 15, 1932, one employer; and compositors, Winnipeg, Man., March 13, 1933, one employer.

Particulars have been received recently as to a strike of millinery workers in one establishment in Toronto, referred to in the February issue of the LABOUR GAZETTE as occurring in January. The strike involved fourteen employees from January 8 to January 28, the employer agreeing to recognize an agreement between the Cloth Hat, Cap and Millinery Workers' International Union and the previous proprietor.

A minor dispute involved twenty-two taxi drivers employed by one firm in Vancouver for two hours on February 4. The men were paid one-third of the receipts with a minimum of \$7.00 per week and demanded a minimum of \$10.00 per week, which was conceded.

A minor dispute involved four employees of a scrap metal and waste paper dealer at Windsor, Ont., for one day on February 6, demanding an increase in wages from 15 cents per hour to 35 cents. The employer agreed to increase the rate to 25 cents, which was accepted. The union reported that other workers in the establishment also received increases in wages but the employer stated that these were not involved in the dispute.

A minor strike involving four employees in one restaurant in Toronto for one-half day on February 17 resulted in wage increases of two dollars per week and an agreement with the Food Workers Industrial Union, similar to that summarized in LABOUR GAZETTE for February on page 194, following a strike involving several restaurants.

Disputes involving men on unemployment relief work, who are not paid wages but receive subsistence for which work is performed or may be required, are not included in the record, no relation of employer and employee being involved.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

LOGGERS, VANCOUVER ISLAND, B.C.—The strike of loggers and other lumber camp workers employed by one firm with 400 employees in the Campbell River district on Vancouver Island on January 27, spread during February to other parts of the island involving numbers reported as from 1,200 to 1,300 by February 22. In one camp involved on the latter date it was reported that the strike was settled within a few days on the basis of wage increases of twenty per cent. In certain other camps wage increases of ten per cent, stated to be the third such increase in the past year, were given without cessation of work. The strike was called by the Lumber Workers' Industrial Union demanding a wage scale ranging from \$3.20 per day to \$6.50 for lumber workers, shop and transportation employees, and \$2.00 to \$3.50 per day for camp workers, the latter with board, etc.; also time and one-half rates for overtime, the abolition of Sunday work except in emergencies at double time rates, recognition of camp committees, the abolition of black lists and discrimination, reinstatement of all men discharged or laid off and commissaries to be supplied at cost, including freight charges. The minimum rates previously paid in the various camps for lumber workers were from \$2.20 per day to \$2.65 per day while the top rates were from \$6 to \$6.20. The Deputy Minister of Labour for British Columbia interviewed the representatives of the employers and employees, and toward the end of February placed before both parties proposals for a wage scale ranging from \$2.75 per day to \$6.50 for lumber workers; no discrimination against men returning who had been employed before operations ceased; no Sunday work except for extreme emergency; no control by operators over purchasing of commissary by employees; arrangements to be made between employers and employees to settle difficulties arising. The employers agreed to these terms but the strikers' representatives insisted on compliance with their demands. At the end of the month, therefore, no settlement had been reached.

COAL MINERS, SYDNEY MINES, N.S.—Coal miners in one colliery were involved in a cessation of work on January 31, demanding that the wages of certain piece workers on longwall mining should be made up to \$3.05 per day for those days when earnings were low. This was granted and arrangements were made for the adjustment of the piece rates and the working conditions. Work was resumed on February 2.

SHOE FACTORY WORKERS, TORONTO, ONT.—Employees in one establishment ceased work on January 23, 1934, demanding union recognition, a fifteen per cent increase in wages

and the reinstatement of a discharged worker. On February 7, work was resumed under a signed agreement with the Shoe and Leather Workers' Industrial Union providing for an increase in wages of approximately eight per cent, closed union shop, and the reinstatement of the discharged worker, also provision for a further increase in wages for the next season.

**BOYS' CLOTHING FACTORY WORKERS, TORONTO, ONT.**—At the end of February no termination had been reported in this dispute, which commenced on November 3, 1933, to secure an increase in wages and recognition of the union, the Amalgamated Clothing Workers of America. On February 9 the employer involved pleaded guilty to breach of the Minimum Wage Act, as the result of action taken by the Minimum Wage Board on complaints of the striking employees. A fine was imposed and the firm was also ordered to turn over to the Board the difference between the wages

paid and the legal scale, the money to be distributed to workers entitled to it.

**SHIRT FACTORY WORKERS, TORONTO, ONT.**—The employees involved in this dispute, affecting one establishment, who had ceased work on January 23 demanding a fifteen per cent wage increase, resumed work of February 8, having secured a ten per cent increase in wages as a result of negotiations.

**FURNITURE FACTORY WORKERS, MONTREAL, P.Q.**—Twelve employees in one establishment ceased work on January 23 demanding an hourly rate of 40 cents instead of piece rates, and recognition of a shop committee. The employer is reported to have replaced the strikers during February and the dispute is, therefore, reported as lapsed.

**BROOM AND BRUSH FACTORY WORKERS, VANCOUVER, B.C.**—As stated elsewhere in this article, information as to this dispute, which commenced on January 27, was received in the Department too late for inclusion in the

#### STRIKES AND LOCKOUTS IN CANADA DURING FEBRUARY, 1934\*

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
<b>(a) Strikes and Lockouts in progress prior to February, 1934.</b>			
<b>LOGGING—</b> Loggers, etc., Campbell River, B.C. ....	1,300	20,000	Commenced Jan. 27, 1934; for increased wages and recognition of union; untermi- nated
<b>MINING, NON-FERROUS SMELTING AND QUARRYING—</b> Coal miners, Sydney Mines, N.S. ....	600	600	Commenced Jan. 31, 1934; for revision of piece rates with a minimum per day; terminated Feb. 1, 1934; in favour of workers.
<b>MANUFACTURING—</b> <i>Boots and Shoes (Leather)—</i> Shoe factory workers, Toronto, Ont. ....	52	312	Commenced Jan. 22, 1934; for union recognition, increase in wages and reinstatement of worker; terminated Feb. 7, 1934; in favour of workers.
<i>Textiles, Clothing, etc.—</i> Boys' clothing factory work- ers, Toronto, Ont. ....	128	3,000	Commencing Nov. 3, 1933; for recognition of union and increased wages; untermi- nated.
Shirt factory workers, Toronto, Ont. ....	10	60	Commenced Jan. 23, 1934; for increase in wages; terminated Feb. 7, 1934; in favour of workers.
Knitting factory workers, Win- nipeg, Man. ....	27	548	Commenced Jan. 23, 1934; against discharge of workers; untermi- nated.
<i>Other Wood Products—</i> Shingle weavers, Port Moody, B.C. ....	20	360	Commenced Jan. 2, 1934; against lower wages; untermi- nated.
Furniture factory workers, Montreal, P.Q. ....	12	144	Commenced Jan. 23, 1934; for increase in wages and recognition of union; lapsed by Feb. 15, 1934; in favour of employer.
<i>Miscellaneous—</i> Broom and Brush factory workers, Vancouver, B.C. ....	8	192	Commenced Jan. 27, 1934; for increased wages and reduced hours; untermi- nated.

STRIKES AND LOCKOUTS IN CANADA DURING FEBRUARY, 1934\*—*Concluded*

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
<b>(b) Strikes and Lockouts Commencing during February, 1934.</b>			
<b>MINING, NON-FERROUS SMELTING AND QUARRYING—</b>			
Coal miners, Glace Bay, N.S.....	750	750	Commenced Feb. 2, 1934; against suspension of worker; terminated Feb. 3, 1934; in favour of employer.
Coal miners (steam shovel operators, etc.) Coal Valley Alta. . .	65	130	Commenced Feb. 16, 1934; for renewal of union agreement; terminated Feb. 17, 1934; compromise.
Coal miners, Stellarton, N.S.....	1,300	650	Commenced Feb. 28, 1934; against reduction in wages; unternminated.
<b>MANUFACTURING—</b>			
Boots and Shoes (Leather)— Shoefactory workers, Toronto, Ont. ....	50	500	Commenced Feb. 9, 1934; for increase in wages and union agreement; terminated Feb. 20, 1934; in favour of workers.
Shoe factory workers, Toronto, Ont.....	10	20	Commenced Feb. 27, 1934; for increase in wages and improved working conditions; unternminated.
<i>Textiles, Clothing, etc.—</i>			
Women's clothing factory workers (cloakmakers), Winnipeg, Man. ....	60	180	Commenced Feb. 8, 1934; against discharge of workers and for recognition of union shop committee; terminated Feb. 10, 1934; in favour of workers.
Textile factory workers, (cotton), Trenton, Ont.....	23	69	Commenced Feb. 21, 1934; against piece work system and for reduction in hours; terminated Feb. 28, 1934; compromise.
Textile factory workers, (silk), Louisville, P.Q.....	800	800	Commenced Feb. 27, 1934; for increase in wages; terminated Feb. 27, 1934; in favour of workers.
<i>Other Wood Products—</i>			
Sawmill workers, Qualicum Beach, B.C.....	50	150	Commenced Feb. 9, 1934; for increase in wages; terminated Feb. 12, 1934; compromise.
Furniture factory workers, Kitchener, Ont.....	35	450	Commenced Feb. 7, 1934; for increase in wages, reduced hours and recognition of union; terminated Feb. 21, 1934; compromise.
Furniture factory workers, Kitchener, Ont.....	160	1,760	Commenced Feb. 16, 1934; alleged violation of agreement; unternminated.
<b>SERVICE—</b>			
<i>Recreational—</i>			
Motion picture projectionists, Windsor, Ont.....	3	15	Alleged lockout; commencing Feb. 2, 1934; <i>re</i> partial restoration of wage decrease; terminated Feb. 7, 1934; workers reinstated.

\*In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which working time was lost to an appreciable extent.

February issue of the LABOUR GAZETTE. The stoppage involved eight broom makers and sorters employed by one company in a demand for an increase in wages from \$9 per week to \$13 and a reduction in hours from 48 per week to 46. At the end of the month the dispute was reported as unternminated.

COAL MINERS, GLACE BAY, N.S.—A number of employees in one colliery ceased work on February 22 to secure the reinstatement of a

worker, suspended for occupying a company house illegally. The strikers complained of discrimination against members of their union, another organization having an agreement with the employer, and requested the intervention of the provincial government. The employer reinstated the worker when the house was vacated some days later, but operation of the mine for only one shift was lost as the mine was being worked part time.

**COAL MINERS (STEAM SHOVEL OPERATORS, ETC.), COAL VALLEY, ALTA.**—During negotiations between the employers and the International Union of Operating Engineers, representing steam shovel operators and other employees, in connection with the revision and renewal of an agreement which had expired on December 31, 1933, sixty-five steam shovel operators, dinky locomotive engineers, etc., employed in one colliery, ceased work on February 16. The union applied for conciliation by the Department of Labour and at the suggestion of the Department work was resumed on February 19 pending the results of the negotiations, and, if necessary, proceedings under the Industrial Disputes Investigation Act. Another mine in the district, not on strike, was involved in the dispute. The western representative of the Department met the parties to the dispute in conference at Coal Valley and at Edmonton and the agreement was renewed, with certain amendments. These were modifications of proposals of the employer, and provided for the recognition of seniority in the assignment of work and in filling positions of firemen and of dinky locomotive engineers, and also that all hours worked should be cumulative to the monthly guarantee.

**COAL MINERS, STELLARTON, N.S.**—Employees in the collieries of one company ceased work in the afternoon of February 28 when a reduced wage scale was to come into effect. The company had been for some time in the hands of receivers and in November the latter stated that the mines could no longer be operated unless the wage scale were reduced. As the miners refused to agree to a scale lower than in the other principal mines in the province, the mines were closed until the middle of December when the provincial government arranged for financial assistance to enable the mines to be operated without changes in wages until an investigation could be made. Representatives of the miners met with the receivers and the provincial government in Halifax on February 14 to consider the report of the investigator, but refused to agree to the reduced wage scale reported to be necessary. The receivers posted the new scale effective March 1, providing rates for men on day wages ranging from \$2.80 to \$3.83 instead of \$3.25 to \$5.10, and for reductions of twenty per cent to twenty-three per cent in piece rates. The mines had been operated for some time only two or three days per week and the receivers stated that the working time per week would be lengthened as much as possible and the wage reduction restored as soon as financial conditions permitted; also that no deductions from earnings would be made for back rent

or coal for one year and reductions in rates for rent and coal to miners would be considered. No settlement, however, was reached.

**WOMEN'S CLOTHING FACTORY WORKERS (CLOAKMAKERS), WINNIPEG, MAN.**—A number of employees in one establishment ceased work, demanding the reinstatement of certain workers and recognition of a union shop committee, on February 8. Work was resumed on February 12, the union reporting that their demands had been conceded.

**TEXTILE FACTORY WORKERS (COTTON), TRENTON, ONT.**—Protesting against the adoption of the piece work system of wage payment in one cotton yarn factory at Trenton, Ont., members of the night shift ceased work on February 21. Work was resumed the next night, however, but on February 26 operations were again suspended, the strikers demanding a minimum rate of 35 cents per hour, a fifty hour week and the abolition of the piece work system. A number of the strikers returned to work on February 28 when the employer agreed to restore the rate of 22 cents per hour in effect prior to the walkout, the sixty hour week also being retained. A number of workers who refused to accept less than 35 cents per hour were paid off.

**TEXTILE FACTORY WORKERS (SILK), LOUISEVILLE, P.Q.**—Employees in one textile mill at Louiseville, P.Q., were involved in a twenty-four hour strike on February 27, when twenty-eight employees in the silk-washing Department demanded an increase in wages from 19 cents per hour to 25 cents, the entire staff joining in the strike. Increases ranging from twelve and one-half per cent to fifteen per cent were conceded and work was resumed on February 28.

**SAWMILL WORKERS, QUALICUM BEACH, B.C.**—Employees in one establishment ceased work on February 9 demanding an increase in wages from 17½-50 cents per hour to 30-60 cents. The Deputy Minister of Labour for British Columbia and the western representative of the Federal Department of Labour acted as mediators in the dispute with the result that work was resumed on February 13, the employer having agreed to increase wages as from March 1.

**FURNITURE FACTORY WORKERS, KITCHENER, ONT.**—Two disputes were called during February by the Furniture and Woodworkers' Industrial Union of Canada against furniture manufacturers in Kitchener. The first dispute, commencing February 7, involved some thirty-five workers and one firm in a demand for a 25-45 per cent wage increase, a forty-four hour week and recognition of the union. The employer refused to deal with the union

and the plant was picketed by the strikers, a few non-union employees remaining at work. Negotiations between the shop committee and the plant manager, however, resulted in the signing of an agreement on February 21 providing for wage increases of 10-25 per cent, the forty-four hour week and the right of the employee to join individually any union he desires, the company, however, continuing to refuse recognition to the union. The agreement is summarized elsewhere in this issue.

In the second case, on February 16, one hundred employees of one firm ceased work

alleging the employer had failed to live up to the terms of the agreement signed in November, 1933. Sixty employees of a second firm associated with the first joined in the dispute. The factories attempted to operate with reduced staffs but were picketed by the strikers. Three pickets were arrested on February 20 on charges of obstructing the police and were remanded for trial on bail. The homes of employees who continued to work were damaged, it being alleged that the strikers were responsible. At the end of the month the strike had not been terminated.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue of February, 1934, in the review of Strikes and Lockouts in Canada and Other Countries, 1933. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Statistics given in the annual review and in this monthly article are taken as far as possible directly from the government publications of the various countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

### Great Britain

The number of disputes beginning in January was 32, and 9 were in effect from the previous month, making a total of 41 disputes in progress during the month, involving 8,700 workers with a time loss of 41,000 working days. Of the 32 disputes beginning in the month, 6 were over demands for increased wages, 9 over other wage questions, 2 over questions as to working hours, 6 over questions respecting the employment of particular classes or persons and 4 over questions of trade union principle; and 5 were over other questions. Settlements were reached during the month in 28 disputes, of which 9 were in favour of workers, 12 in favour of employers and 7 ended in compromises; in 2 other disputes, work was resumed pending negotiations.

A strike of coal miners near Pontefract was in progress from January 9 to January 22, over the transfer of a worker from piece work to

day work, and was settled by the reinstatement of the worker conditionally.

### France

A strike of taxi-cab drivers in Paris was in effect from February 1, to March 2, against increased taxes on gasoline and for other demands. Before the termination of the strike, certain reductions in gasoline and operating taxes were made and other concessions granted the strikers.

### Netherlands

Preliminary figures for the year 1933 give the number of disputes in existence during the year as 182, involving 850 establishments and 12,490 workers with a time loss of 500,900 working days for the year.

### United States

The number of disputes beginning in December was 41 and 40 were still in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 14,706, and the time loss 441,807 working days for the month.

The strike of several thousand anthracite coal miners in Pennsylvania, which began January 15, to secure recognition of their newly formed union and other demands, was mentioned in the last issue of the LABOUR GAZETTE. Although no report of a definite settlement has been noted, it was reported that by the end of January, employment conditions were no longer greatly affected and early in February that the dispute was likely to be abandoned.

A stoppage of work of 35,000 workers in the dyeing and cleaning industry in New York City, which number included proprietors of small establishments began February 19, to compel certain large chain store establishments to observe the code of the industry, especially

as to prices, and also for new agreements with increased wage rates.

A strike of about 30,000 taxi drivers in New York City began February 2, over the disposition of the money collected from a special

city tax which was subsequently declared to be illegal. The strikers also demanded recognition of their new union. A compromise settlement was reached February 8, through the intervention of the Mayor of the city.

## COMBINES INVESTIGATION ACT

### List of Principal Investigations since 1923

**I**NFORMATION concerning investigations under the Combines Investigation Act since this legislation was passed in 1923 was given by Honourable W. A. Gordon, Minister of Labour, in the House of Commons on March 7 in answer to a series of questions asked by J. R. Hurtubise, M.P. for Nipissing. The principal investigations conducted in the three periods indicated in the questions were as follows:

#### 1923-25

Distributors of fruits and vegetables in Western Canada;

Coal dealers at Winnipeg and other places in Western Canada;

Wholesale distributors of New Brunswick potatoes;

Over fifty other cases dealt with.

#### 1926-30

Bread bakeries in Montreal;

Distributors of fruits and vegetables produced in Ontario;

Wholesale and retail druggist and manufacturers (Proprietary Articles Trade Association);

Plumbing and heating contractors and others in Ontario (Amalgamated Builders' Council);

Electrical contractors in Toronto (Electrical Estimators' Association);

Over one hundred other cases dealt with.

#### 1931-33

Bread-making industry in Canada;

Motion picture industry in Canada;

Manufacturers of radio tubes and sets;

Manufacturers of fruit and meat baskets, Ontario (Canadian Basket Pool);

Canadian tobacco manufacturers and other buyers of Ontario tobacco;

Importers and distributors of British anthracite coal in Canada;

Over one hundred other cases dealt with.

In answer to the inquiry as to what fines had been imposed the following particulars were given:—

Western fruit combine case, 1926, 8 fines, \$25,000 each, \$200,000.

Amalgamated Builders' Council, 1930-31, 30 fines, ranging from \$100 to \$10,000, \$45,200.

Electrical Estimators' Association, 1932, 22 fines, ranging from \$100 to \$2,500, \$26,000.

Canadian Basket Pool, 1933, 15 fines, \$100 each, \$1,500.

Importers of British anthracite coal, 1933, 5 fines, ranging from \$5,000 to \$7,000, \$30,000.

The Winnipeg City Council, on February 13, authorized the Unemployment Committee to make arrangements for the provision for a period of three months, of medical relief on the lines of a tentative agreement with the doctors' committee. The unemployed may be attended by their own physicians, safeguards being provided as to the total cost. The resolution of the Council ordered that efforts should be continued to secure federal and provincial assistance for medical aid as part of unemployment relief.

The mayors of twenty-two municipalities in Ontario held a convention on February 15-16, at London, Ontario, the resolutions that

were adopted containing the following recommendations: Reduction of the age limit under the Dominion Old Age Pension system from 70 to 65 years; provincial legislation to permit municipalities to renovate old houses and charge the cost to the properties; appointment of commissions to bring into existence Dominion systems of unemployment insurance and minimum wages; extension by the Provincial Government of the residence clause in connection with unemployment relief, to twelve months; assumption by the Dominion Government of full responsibility for the cost of direct relief; and that the Provincial Government take responsibility for the relief of transients.

## UNEMPLOYMENT RELIEF CAMPS IN CANADA

Address delivered by the Hon. D. M. Sutherland, Minister of National Defence, over the Canadian Radio Commission's System on March 4, 1934

I AM to speak to you tonight for a few minutes on the camps for the care of single, homeless men which have been developed by the Department of National Defence in co-operation with the Department of Labour. This task has been undertaken in consequence of the unemployment situation which existed in Canada in the Autumn of 1932 due to world-wide depression. At that date over 70,000 single homeless men in Canada were unemployed and with no prospects of employment as the resources of all governments—Dominion, provincial and municipal—were strained in providing work for married and single men with dependents. Beside lacking prospects for employment, these single homeless men lacked proper shelter, food and clothing; consequently their morale was low, their physical condition was poor, and their outlook was gloomy to say the least. Therefore, in addition to providing a measure of relief it was urgently necessary to take action to restore the health and morale of these men.

The Department of National Defence possesses a Dominion wide organization which is able, in emergency, to feed, clothe and administer to the general requirements of large numbers of men. It also has its own engineering service. It was suggested, therefore, that this organization might be utilized for the care of single homeless men in need of relief in camps where their conditions could be improved by good food, adequate clothing, comfortable accommodation, proper medical care and by useful work on undertakings to the general advantage of Canada.

The proposal to utilize the Department of National Defence for this purpose was approved by the Government, and by Order in Council dated October 8, 1932, provision was made for the care of 2,000 single homeless men in need of relief to March 31, 1933. Expansion has progressed until the last Order in Council of October, 1933, provides for the care of 35,000 of these men during the period November 1, 1933, to March 31, 1934. At February 15, the authorized establishment was 24,697 and the actual strength in the camps was 19,725.

The works selected for execution under this scheme are located in every province of the Dominion except Prince Edward Island where, to date, the problem of the single homeless man has not been serious. They

comprise development of landing fields on the Trans-Canada Airway, municipal airports, forestry operations, clearing, highway construction, restoration of walls at the historic citadels of Halifax and Quebec, etc. They are mainly of the "primitive" type, that is, they absorb a large number of unskilled labour in proportion to the amount required for skilled labour, machinery and materials of construction. In our Canadian climate, grading and similar operations are usually not possible in the winter, and owing to the necessity of providing alternative work some of our projects then include a proportion of simple types of building construction. All the works undertaken anticipate the normal programs of the Department by a number of years, and in consequence their execution does not deprive anyone of work under normal conditions which he might otherwise have had either now or in the near future. In fact the projects have afforded opportunities of employment to married skilled mechanics resident in the vicinity that they would not have had if the projects had not been instituted. At February 15, 108 projects were in active operation, 2 had been completed and 13 were closed down for the winter.

The supervisory and administrative staffs are selected, for the most part, from married men with dependants who have the necessary qualifications and are in need of relief. Military personnel are in charge of projects only in a few cases where the administrative problems are such as to require an officer who is thoroughly familiar with departmental practice in matter of supplies, clothing, equipment, etc. Technical positions on the supervisory staffs are filled, to a considerable extent, by nominees of the Engineering Institute of Canada, whose Relief Committees bring to notice deserving cases of not only members of the Institute but also members of the Provincial Professional Engineers Association, and qualified engineers in need of relief who are non-members of either body.

Relief labourers are selected in consultation with the Employment Service of Canada or with municipal authorities in localities where no offices of the Employment Service exist. This ensures that personnel selected are really eligible for care under this scheme. The scheme is wholly non-sectarian, and non-political, and apart from being single, home-

less, and in need of relief, the only qualifications for admission to a project are that the applicant must be free from communicable disease and physically fit for ordinary manual labour.

When a man is selected and medical examination indicates that he is physically suitable, he is given free transportation to a project where he is comfortably housed in buildings, hutments or tents depending on the location of the project and the season of the year. Tents are normally used for accommodation at projects where only summer work is feasible.

The food supplied is the standard army ration but this may be varied at the discretion of the official in charge, provided that the medical officers are satisfied that it is not unbalanced by this variation and provided that the cost of the standard army ration at the location concerned is not exceeded. This ration has proved ample in the hands of competent cooks, and great care is taken to ensure that only capable cooks are retained. The authorized ration is also supplemented by produce from project vegetable gardens where the soil and other conditions permit.

Relief personnel are given a free issue of such articles of clothing as they actually require for the season. The articles issued include leather boots, rubber lumbermen's boots, trousers, shirts, socks, mackinaw, cap, sweater, etc., as well as necessities such as razors, towels, kit bags, etc. When a man leaves a project he is permitted to retain essential requirements, depending on the season of the year, but is obliged to turn in all other articles issued to him.

The health of the men is given careful attention, with the result that the incidence of sickness has been very small, and the death rate, even including deaths from accidents occurring outside the projects has been only approximately 3 per thousand of camp population per year, which is less than a third of the average death rate in Canada as a whole. The services of qualified doctors are provided for all projects, and serious cases of accident or illness are treated in the nearest civil hospital. The allowances of a man are continued while he is in hospital unless his admission has been necessitated through wilful neglect on his part.

Facilities for sports, recreation, education and spiritual welfare are provided in addition to good accommodation, wholesome food, adequate clothing and proper medical care. Sports equipment has been made available through the generosity of private individuals and organizations who have also supplied reading material, indoor games, gramophones

and radios. Any person having any spare equipment of this nature is cordially invited to send it to the nearest Military District Headquarters, from which it will be sent to the camps most in need of assistance of this nature. Instruction in elementary educational subjects is given by representatives of the Frontier College who work as labourers on the project during the day and hold classes in the evenings for those who desire to attend; vocational classes are held where the location of the project in proximity to Departmental workshops permits. The spiritual welfare of the men is provided for by permitting them to attend near-by churches or by arrangements for clergymen of various denominations to visit the camps and conduct services.

A free issue of smoking tobacco is made to each smoker.

In addition to transportation, accommodation, food, tobacco, clothing and medical care in kind, the relief labourers receive 20 cents per day for each day, or part of a day, actually worked.

No military discipline or drill is permitted, and no powers of compulsion or punishment have been taken by the Department of National Defence in respect of relief personnel. The rules prescribed are no more than will be found in any well conducted lumber or construction camp. The entire scheme is on a voluntary basis, and no man is forced either to join a project or remain if he wishes to leave. If he refuses to obey the simple rules laid down he is required to leave, but he is not subjected to any punishment unless his actions require his arrest and conviction in the ordinary process of law.

No tradesman among the relief personnel is forced to work at his trade, and if he prefers doing unskilled labourers' work he is allowed to do so. He is, however, encouraged to work at his trade as opportunities offer with a view to retaining his trade efficiency, and it is of interest to note that many prefer to work at their trades for this reason. Young men who have never had the opportunity of learning a trade are encouraged to work as tradesmen's helpers as opportunities occur in order that they may learn the rudiments of a trade and so be able to qualify for something more than jobs as "unskilled labourers" when they return to normal employment.

Men are encouraged to return to normal employment and if they secure jobs they are given free transportation for distances up to those of their incoming journeys in order to accept them. It is gratifying to note that there has been a steady flow from projects back to industry, and this will increase as

industry revives. Further, men are given leave to engage in seasonal employment, such as harvesting, and are taken back on the projects at the termination if they so desire.

I would particularly like to emphasize that the purpose of our work is to afford a measure of relief to single homeless unemployed men until they can be absorbed in industry. I do not claim that we have any final solution of our unemployment problem, neither do I say that the measures which have been developed can be applied to single or married men with dependants from whom they would be separated if accommodated in camps. I maintain, however, that single homeless men who are provided with good accommodation, wholesome and sufficient food, adequate clothing, proper medical care and hospital treatment, tobacco, educational and recreational facilities, opportunities to learn a trade, and a net cash allowance of about \$5 per month, in return for their work, are probably better off from a purely material point of view than many married men on direct relief in these times of depression.

At this point I would like to record our appreciation for the help and assistance which

has been freely given by many of our great Canadian religious, educational and charitable organizations, and to the multitude of private citizens who have helped us through the provision of radios, books, games and similar articles which would not otherwise have been made available.

The officers of the Department have thrown themselves whole-heartedly into the novel task which has been allotted to them; they take much satisfaction from the evident improvement in the health and spirits of the many thousands of men who have been temporarily entrusted to their care.

In conclusion it is satisfactory to record that there has been a steady flow of men from the camps back to industry, and it is confidently hoped that with the developing opportunities for regular employment this will continue and increase. The purpose has been to ensure that the efficiency—mental, physical and at their trades—of the men entrusted to the Department's care is improved, so that they may be returned to the economic life of the country well able to resume their usual work.

## **“ESSENTIALS OF A RELIEF PROGRAM FOR CANADA”**

### **Some Suggestions Offered by the Canadian Council on Child and Family Welfare**

THE Canadian Council on Child and Family Welfare recently published a statement, prepared by its Board of Governors, in which the “essentials of a relief program for Canada” are discussed, immediate action being recommended along three main lines: (1) the constructive re-organization of direct relief; (2) a co-ordinated plan of relief work; and (3) the initiation of an actuarially sound system of unemployment insurance. Accurate information as to the extent and incidence of destitution, and a definite plan—federal, provincial and municipal—for co-ordinating the whole relief problem, are considered as the prime needs of the situation today. The relief plan should include “measures of social insurance or assistance admittedly necessary in an industrialized civilization.”

*Unemployment Insurance.*—On the subject of unemployment insurance the statement says: “There would appear to be general agreement in Canada as to the desirability of some system of unemployment insurance on some contributory basis, but the more closely such a project is examined the more obvious it becomes that such a measure relieves but part of the economic and social dependency

that threatens the wageworker in modern civilization. There is now no serious questioning of the contention that any system of unemployment insurance projected for Canada should be actuarially sound and based on the contributory principle... Even in the best of times no such system of contributory assurance would provide full social protection for the casually employed—always and even at the present one of the heaviest items in our unemployment relief load. The decasualization of unskilled labour must depend on better organization of the employment market and so of the employment services. No actuarially sound system could possibly provide for the continuous burden of various forms of relief and social aid required in our present community life for the prevention and relief of dependency arising from various causes other than unemployment, and yet against which the security of the wage-working population requires protection. While it is possible to evolve an actuarially sound system to provide against ordinary unemployment and even to extend this to seasonal and a measure of cyclical unemployment of limited duration, it is highly doubtful whether any insurance sys-

tem could provide against the extreme and almost catastrophic contraction of employment of 1932 and 1933 arising from severe economic derangement of credit and finance. Unless a well-articulated system of relief administration works side by side with any unemployment insurance scheme, the danger of loading the latter with all sorts of charges which are really relief burdens, such as extended payments, extra grants, etc., becomes a very grave one and apt to undermine the actuarial basis of any sound insurance system."

Unemployment, therefore, in the opinion of the Council, must be supplemented by local relief services, health insurance, and provision against various types of dependency; and the functions of public and private services must be co-ordinated. Provision should also be made to organize and co-ordinate federal, provincial and municipal reserve funds to meet economic emergencies.

*An Unemployment Average.*—For the provision of accurate information the Council recommends that "action should be initiated at the earliest possible date to ascertain the incidence of unemployment in Canada which could be regarded as a fair average unemployment and the extent to which its costs could be met by each province, within provincial and municipal resources, on such basis as these respective authorities within each respective province might decide. Whenever and as long as unemployment conditions extended beyond these average conditions a condition of emergency need would be accepted as prevailing and as calling for treatment outside the limits even of extended unemployment insurance benefits and involving participation of special payments from public funds set aside specifically for exceptional unemployment conditions.

*Classification of Services.*—The Council proposes that the governments concerned should perfect a system for the registration of employment and unemployment, additional Employment Offices being created as required. Relief statistics should show the types of persons in receipt of relief, according to their chances of re-employment. Direct unemployment relief should be continued until the employment condition regarded as normal has been reached. The Council recommends, however, that "Dominion participation in these direct relief costs in future should be made subject to provincial and municipal establishment, within each province, of a definite system of relief organization and administration, the details of which should be submitted to the federal authority by each province and on the basis of which the federal

power should then decide whether or not it will participate in the plan, the Dominion Relief Act to be so re-cast in the present session of Parliament as to provide for federal contributory aid being made on such a conditional basis. This should involve a much more definite system of supervision and co-ordination of relief methods and the inclusion in the relief services of some of the best qualified and ablest people obtainable with a background and knowledge of social work. Such a development would bring about real economies, as the supplementing of the business administration of relief by a definitely socialized approach as well must come if relief lists are to be ultimately cleared by the readjustment of many families to positions of self-support."

*Return to the Land.*—Apart, however, from the organization of systems of relief, certain fundamental problems in social readjustment must be studied and solved: "Relief of itself over a long period of time carries", it is shown, "a vitiating influence which demands stimulation of any type of effort that will call into play individual initiative and independence. Any such channels of possible development must be explored. The Canadian picture presents certain special aspects in this regard. The rapid urbanization of population which has taken place in the last quarter century offers peculiar problems in the heavy preponderance of relief loads in the urban centres, particularly in the older centres of the country.

"Much of this drift of population developed following upon heavy construction works of a capital investment nature, and the secondary stimulation of industrial and manufacturing activity related thereto. Undoubtedly also, since 1920-30 there has been a heavy influx of rural dwellers to urban centres attracted by the relief scales and provisions offered there. It would therefore seem certain that even with substantial adjustments in industrial and agricultural management a definite percentage of our industrial population cannot be absorbed again within any reasonable time into ordinary industrial employment, or in related secondary services of urban occupation. Yet many of these unemployed urban dwellers, for whom no early return to industrial employment can be anticipated, until recent years were engaged in agriculture. Therefore, as part of the immediately possible measures of relieving the present relief and unemployment situation, the desirability of a better equilibrium between urban and rural population in Canada would seem to demand careful attention. A well developed relief plan should therefore include provisions

for seeking out among the unemployed those who are suited to life on the land and for assisting them in rehabilitating themselves in agricultural re-establishment. This would have the result of diminishing the number of those receiving direct relief within the urban centres, many of whom have little hope of reasonably early re-employment, and of putting them in a position to provide themselves in the

future with the essentials of food, fuel and clothing. A well constructed plan of so stimulating the individual's self-reliance and independence through a carefully organized return to the land of people capable and willing to cultivate it, would appear to be a necessary item in a comprehensive Canadian relief program today."

## DEPARTMENT OF PENSIONS AND NATIONAL HEALTH

### Report for the Fiscal Period Ending March 31, 1933

THE annual report of the Department of Pensions and National Health reviews the various administrative activities of the department during the fiscal year ending March 31, 1933. The report is divided into six sections, as follows: the Pensions Division, which deals with pensions of ex-service men; the War Veterans' Allowance Committee; the Board of Pension Commissioners for Canada; the Pension Tribunal; the Pension Appeal Court; and the National Health Division, which is concerned with matters affecting public health, child welfare, etc.

According to the information contained in the report of the Pensions Division the number of pensioners in hospitals on March 31, 1933, was 2,533, as compared with 2,626 in the previous year. The total number of war pensioners at the close of the year was 77,967, of whom 66,336 resided in Canada.

*Pensioners' Employment and Relief.*—The duty of securing employment for handicapped veterans is chiefly performed by two organizations—the Employment Service of Canada and the Montreal Rehabilitation Committee. A summary of the statistics indicated that the total placements during the fiscal year 1932-33 were 6,565, as compared with 7,451 in the previous year. During 1932-33, applications for assistance in obtaining employment numbered 16,623 as compared with 19,067 in 1931-32.

The expenditure on relief during 1932-33 was \$1,978,284.64, as compared with \$2,082,052.10 in the year previous. The number of men who obtained relief was 14,368, as compared with 12,303, in 1931-32. This relief was issued 103,714 times, or an average of 13.85 times per man.

Vetcraft industries operated by the department at Halifax, Montreal, Toronto and Hamilton, with a factory under the Red Cross Society at Halifax, continued to give sheltered employment. These shops manufacture juvenile furniture and toys, unfinished furniture

lines, porcelain table tops, poppy and wreath emblems. During the year, 31 men were admitted and 76 discharged, leaving 143 employed in these shops at March 31, 1933. There was one man undergoing vocational training on March 31, 1933, while under "industrial problem cases" none were receiving probational training, ten being struck off strength during the year.

The report of the War Veterans' Allowance Committee, which functions under legislation to relieve from necessity aged or totally incapacitated war veterans, indicate that the number of new applications dealt with was 2,746, and the number of cases reviewed was 5,312. The duty of the Veterans' Bureau, established under amendments to the Pensions' Act, is to represent the applicant for pension in the prosecution of his claim before the judicial bodies. Applications dealt with during the year numbered 22,146, leaving 14,853 outstanding at the close of the year.

*Pensioners' Workmen's Compensation.*—Under Order in Council of 1928 (LABOUR GAZETTE, December, 1928, page 1333) the Dominion Government assumes workmen's compensation liability for pensioners of 25 per cent disability rating or upwards who are suffering injury or disease as a result of an industrial accident. During the fiscal year under review the number of claims was 179, being 21 less than the previous year. No serious accident was reported during the year, so that the actual expenditure showed a marked decrease. It amounted to \$17,461, as against \$49,878 in 1931-32, and \$45,142 in 1930-31.

*Returned Soldiers' Insurance.*—The number of applications received for Returned Soldiers' Insurance was 1,642 as compared with 1,463 during the previous fiscal year. Policies in force at the end of the year numbered 27,536—a decrease of 890—and the amount of insurance carried was \$60,299,358.

*National Health Division.*—Under the Food and Drugs Act, designed for the protection of

the purchasing consumer, the Department, as in other years, carried on its strict inspection and examination of food and drug products imported into Canada. Statistics in the report indicate the extensive supervision exercised in this respect. The prosecutions also show the close check-up conducted. During the year there were 48 convictions, and in 28 other cases, all first offences, settlement was made out of court by the payment of the minimum penalty and costs. Similarly, the Narcotic Drug Division continued its vigilance in the curbing of illegal traffic in drugs. It is the considered opinion of the department that narcotic addiction in Canada is not on the increase. Of the 340 convictions obtained, 164 were federal prosecutions and 175 initiated by provincial and municipal police forces.

Other phases of activity included under the health section were those dealing with public health engineering, public water supplies, particularly in transportation systems on airways, rail and water; and the quarantine and immigration medical health service.

### The Dominion Government and National Health

A motion was made in the House of Commons on February 12 by Mr. H. E. Spencer (Battle River) to refer to the Committee on Industrial and International Relations the question whether the Government should adopt a definite health policy which could be carried out in co-operation with the provincial governments. Mr. Spencer recalled that the House in 1930, and later in 1931, had accepted a resolution asking the government to consider "the advisability of making grants to the provinces equal to one-third of the cost of establishing, and to cover permanently, such full-time health units as may be organized;" but that action on that resolution had been delayed by the financial crisis. "A medical service," he continued, "should provide scientific diagnosis and treatment if needed; it should provide adequate pay for doctors and nurses; it should encourage health education, and it should correlate the work of all health agencies." Mr. Spencer suggested in conclusion that public health should be put on a business basis; that the federal and provincial governments should increase expenditures for health; that the medical profession be asked to co-operate, and that the public should be educated in health matters.

The Hon. Murray MacLaren, Minister of Pensions and National Health, speaking on the motion, pointed out that the Dominion Government was already active in supplementing the work of the provincial governments in re-

*Marine Hospital Service.*—Also under jurisdiction of the department is the Marine Hospitals Service administered in conformity with the Canada Shipping Act. By the collection of dues at the rate of two cents per ton of registered tonnage from every vessel (with certain exceptions) medical aid and surgical attendance are provided to sick and injured mariners on vessels that call at Canadian ports. During the year, sick mariners' dues were collected from 2,650 vessels and the number of seamen on these vessels, eligible for treatment was 78,262. Hospital care, out-patient treatment or other medical services were furnished to 5,715. Three thousand four hundred and twenty-four of these were admitted to the various hospitals, 1,383 as out-patients and 2,041 as ward patients. The number of out-patient hospital treatments was 2,688 and the number of hospital days was 42,407. The number of treatments furnished by the doctors paid by the department aggregated 10,663.

gard to public health. He mentioned first the Dominion Council of Health: "This organization," he said, "meets in Ottawa twice yearly under arrangements made by the federal government. It is composed of fifteen members, and includes a health officer from each province, representatives of agriculture and women's organizations, as well as a specialist in public health. I direct the attention of the hon. member who moved this resolution to the existence of this organization. It represents an attempt on the part of the government to nationalize in a manner the care of the sick and to improve sanitation. It brings together representatives from all the provinces and I think provides an example of co-operation."

After an appreciative reference to the movement for health units in Quebec and the western provinces, the minister proceeded to outline the work of the Department of National Health in reference to drugs, proprietary and patent medicines and foods: "The Department which I have the honour of administering guards against exaggerated and false claims in regard to drugs that are on sale to the public. That comes under the federal Department of Health. . . . Proprietary and patent medicines and other medicines of that character must fulfil certain requirements. They must state on their labels the constituent or potent drugs which enter into their composition. It ensures that they do not exceed the proper dosage. It also prevents undue claims

being made to the public. It protects the public who are so prone to depend on something that holds out to them great hope—cures for tuberculosis, cures for cancer, and so forth. All that work is being quietly but effectively done under the federal Department of Health to safeguard the people of Canada." . . . "All radio broadcasting on the question of health and on cures and drugs must first be submitted to the Department of Health to be passed upon before it is broadcast. That has been found to be practical and successful. It is the means of preventing exaggerated advertisements being broadcast over the radio." The Federal government moreover actively supported organizations to combat tuberculosis, venereal and other diseases.

"In reference to child welfare, the Department of Health keeps in close touch with the Child Welfare Association. One of its aims is to further the care of maternity cases, of mothers, infants and children, and this co-operation has advanced in the last year so that there is now a special connection between the Department of National Health and the Child Welfare Organization."

The Minister, in conclusion, intimated that the government could not accept the motion as it would ask the committee to form a definite health policy for the government.

Other speakers on the resolution included Mr. E. F. Willis (Souris) and Mr. Humphrey Mitchell (East Hamilton).

### Investigation into Whitley Councils in Great Britain

The National Industrial Alliance (Great Britain) recently published a report received from a sub-committee appointed to examine the causes which hamper the growth of Whitley Councils and to recommend what steps the Alliance should take to remove those causes, to strengthen existing Councils and to help to set up new Councils. The hampering causes were found by the committee to lie (1) in the absence of legislation enabling a Joint Industrial Council to obtain power to make any of its decisions binding on the whole of the industry concerned, when so desired; (2) in the apparent lack of interest in the industrial council movement on the part of the Government, and, in particular, of the Ministry most directly concerned; (3) in the lack of organization on the part of employers, or workers, or both; (4) in the existence in certain large industries, as engineering and railways, of conciliation machinery different from that of Joint Industrial Councils; (5) in the self-imposed limitation of questions for decision, or even discussion; (6) in the absence of any arrangement for regular or frequent meetings of the Council.

The following conclusions were reached by the investigators:

1. The Whitley conception for the organization of industry is most valuable and should be strongly supported. It has been copied in Spain, the Netherlands and elsewhere.

2. The Councils which have been formed have done valuable service, not only to the industries concerned, but to the nation as a whole; they have brought a spirit of goodwill and a desire for co-operation on the part of both employers and workpeople.

3. In some notable cases the existence of a Whitley Council has led to freedom from strike or lockout for periods lasting over many years. Disputes have arisen, but the Joint Industrial

Council has settled them to the satisfaction and credit of both sides.

4. The benefits have not been confined to the settlement of wages questions and the like, but numerous other problems touching the welfare of the workpeople and of the industry itself have been discussed and settled. Two councils have organized successfully pension schemes for all employees in their respective industries.

5. The setting up of District Councils is infrequent at present and does not seem to be necessary in all cases. The complete machinery is probably not suited to every industry, and needs to be adapted.

6. There is no evidence to show that lack of District Councils and Works Committees, or the absence of representatives of salaried workers has actually hampered the growth of Whitley Councils.

The committee recommends the Alliance to accept the principle that Joint Industrial Councils should have statutory powers so that agreements made by them be legally binding on the trade or industry concerned, and to urge the government and the Ministry of Labour to enact legislation on these lines. Pending the passage of such legislation, the rates fixed by a Joint Industrial Council should be recognized as the "fair wages" for that industry; the Ministry of Labour should ascertain the views of the Joint Industrial Councils on matters of industrial importance as at present it ascertains those of the principal employers' and trade union organizations; the Ministry should actively encourage the establishment of Councils where they do not exist; provision should be made in the constitution of every Council for the settlement of disputes; and Councils should deal not only with wages and labour conditions, but with all questions affecting the industry.

## PROPOSED ENFORCEMENT OF LABOUR UNION AGREEMENTS

### Bill Introduced in Quebec Legislature by Provincial Minister of Labour

A PROPOSED Act respecting the extension of collective labour agreements was introduced in the Legislature of the province of Quebec by the Hon. C. J. Arcand, provincial Minister of Labour, receiving its first reading on January 30 and its second reading on February 8.

The bill, as introduced, was as follows:—

1. This act may be cited as the *Collective Labour Agreements Extension Act*.

2. The Lieutenant-Governor in Council may order that a collective labour agreement made between an association of employees and one or more employers or an association of employers shall also bind all the employees and employers in the same trade or industry; provided that such employees and employers carry on their activities within the territorial jurisdiction which he determines.

Whenever an order is made under the preceding paragraph, the only provisions of the collective labour agreement which thus become obligatory upon the classes of employees and employers concerned, are those respecting rates of wages, the duration of work and the regulating of apprenticeship.

Such order shall remain in force during the same period of time as the collective agreement.

3. Any association of employees or employers, whether a party or not to a collective labour agreement, may request the Lieutenant-Governor in Council to pass an Order in Council under the preceding section.

Such request shall be made by a petition addressed to the Minister of Labour.

When such petition is presented by one of the parties to the collective labour agreement, it must be accompanied by a duly certified copy of such agreement.

When the petition is presented by an association of employees or employers which is not a party to the agreement, the Minister may exact from one of the parties to such agreement a certified copy thereof.

Every association of employees and of employers and every officer or member of such association must comply with such demand of the Minister and furnish the document required.

4. Upon receipt of a petition, the Minister of Labour shall cause notice thereof to be given in the *Quebec Official Gazette* and, during the thirty days from the publishing of such notice, he shall receive the objections to the request contained in the petition.

At the expiration of such delay, the Minister, if he deems that the provisions of the collective labour agreement which is the object of such petition have acquired sufficient importance and meaning for the establishing of conditions of labour in a trade or industry in the region for which the agreement was entered into, may recommend the approval of the petition to the Lieutenant-Governor in Council.

The Order in Council establishing such approval shall come into force from and after its publication in the *Quebec Official Gazette*.

5. The provisions of a collective labour agreement made obligatory under this act shall, in

the region fixed, govern all the individual labour contracts in connection with the trade or industry contemplated by the agreement.

However, when they are to the advantage of the employed, the provisions of an individual labour contract shall have effect although they may be derogatory to those of a collective labour agreement which has been the object of an Order in Council under section 2.

6. The parties to a collective labour agreement made obligatory under this act must form a joint committee charged with supervising the carrying out of such agreement.

Such joint committee must create a board of examiners charged with determining the technical qualifications of workmen and apprentices who benefit from the extension of the collective labour agreement.

Subject to the approval of the Minister of Labour, the joint committee and the board of examiners may adopt by-laws for their internal government and for exercising the powers conferred upon them by this section.

7. Only the workmen and apprentices to whom such board of examiners shall have awarded a certificate of competency shall be entitled to exercise the civil claims which may appertain to them under a collective labour agreement made obligatory under this act.

8. The board of examiners provided for by section 6 shall be entitled to charge, as a fee, five dollars for the examination of a workman and one dollar for that of an apprentice.

The fees so collected shall be employed in defraying the expenses of the said board.

9. The members of a professional syndicate shall be exempted from the examination contemplated by section 6, if such syndicate has its members undergo such an examination or if the union or federation of which the syndicate forms part requires such an examination from those over whom it has jurisdiction.

10. Subject to the provisions of sections 7 and 9, any professional syndicate incorporated under the Professional Syndicates' Act (Revised Statutes, 1925, chapter 255), or any union or federation of professional syndicates organized under the same act, may exercise all actions arising, in favour of each of its members, from a collective labour agreement made obligatory under this act, without having to establish the assignment of the claim of the person concerned, provided that the latter has been advised and has not expressed his opposition thereto. The person concerned may intervene at any time in the suit taken by the syndicate, union or federation.

Whenever, under the preceding paragraph, an action has been brought by a professional syndicate, union or federation of professional syndicates, any other syndicate, union or federation organized under the said Professional Syndicates' Act, the members of which are bound by the collective labour agreement made obligatory, may intervene in the suit taken, on account of the collective interest entailed in the decision of the litigation.

11. This act shall come into force on the day of its sanction.

### Minister's Explanation

Hon. Mr. Arcand, explaining the bill in the Legislature, said that its object was to oblige all employers in the same region to observe the same conditions of labour, as agreed upon by collective contracts freely entered into by one or more labour organizations and an association of employers. Economic conditions, he said, had obliged employers to reduce the costs of production, their economies taking the form mainly of wage reductions—a measure which had a social as well as an economic aspect. Since he became Minister of Labour, Mr. Arcand said, he had received very many complaints as to the wages paid in most industries in the province. The government was faced with three choices: first, to do

nothing, which would be ignoring its responsibility for public order; second, to bring in a minimum wage law; this he considered “would mean a false direction to our social policy”: it would mean that the minimum would become the maximum, would introduce politics with economic questions, and would destroy labour unions by removing from them one of the chief reasons for their existence—moreover a general minimum wage law could not be enforced. What was required, he concluded, was to develop the sense of social responsibility amongst the employers and amongst the workmen, and this could only be done through employers' organizations and workmen's organizations coming together. It was for this reason that the Government had decided upon the present bill.

## SUPERVISION OF LUMBER CAMPS IN QUEBEC, ONTARIO AND NEW BRUNSWICK

DISCUSSIONS were held early in February between the Hon. Honoré Mercier and the Hon. William Finlayson, Ministers of Lands and Forests for Quebec and Ontario respectively, with a view to securing uniform labour conditions in the lumbering industry in the two provinces, thereby ending the unrest that has been evident in the lumber camps during the past two years. Following these conferences a bill was introduced in the Quebec Legislature, receiving its first reading on February 7, under the title “An Act respecting the Commission for the Supervision and Control of Forest Operations.” The Hon. L. A. Taschereau, provincial premier, referring to the bill said:—

“Mr. Finlayson had conferences with Mr. Mercier and myself, and we have agreed that as far as possible a uniform rate of wages in the two provinces should be drawn up. We consider two members will be enough for the commission. In Ontario they are going to name one man and the two commissions will endeavour to work hand in hand.”

In Ontario, the Speech from the Throne at the opening of the Legislature on January 31, as noted on page 99 of the last issue, contained the following paragraph: “Living conditions of men engaged in lumbering operations and boarding in camps in the North Country are such as to call for official investigation and supervision from time to time. It is hoped that proper guidance will serve to prevent the recurrence of disputes and strikes, and avoid the loss and inconvenience entailed upon all concerned.” Speaking of the conditions which would be

dealt with by the new legislation, Mr. Finlayson pointed out that in the old lumbering days little trouble was experienced because of the fact that the operators controlled practically everything about the camps, whereas companies now let bush work to jobbers who employ men on a piece-work basis and charge them for their board. As a result of the conflict of jurisdiction, he said, considerable dissatisfaction, resulting in strikes in many instances, has been evidenced.

The Speech from the Throne at the opening of the New Brunswick Legislature, on February 8, announced that the government would introduce “An Act to aid the settlement of disputes between employers and employees in the lumber industry.”

### Quebec Forest Operations Commissions Act

Some of the provisions of the Bill respecting the Commission for the Supervision and Control of Forest Operations, as it was introduced in the Legislature, are given below:—

“1. This Act may be cited as the *Quebec Forest Operations Commission Act*.

“2. In this Act, unless the context otherwise requires: (1) The word ‘Commission’ designates the Quebec Forest Operations Commission established under this Act; (2) The words ‘timber-limit holder’ mean and include every person, corporation, firm or association of persons holding a licence to cut timber issued under the Lands and Forests Act (Chap. 44), or any previous Act to the same effect, and they include the foreman employed by a timber-limit holder within the above meaning; (3) The word

'employees' means and includes any person who is in any manner whatsoever ordinarily employed to carry out forest operations within the meaning of this Act; (4) The word 'contractor' means and includes any person, corporation, firm or association of persons undertaking forest operations for a timber-limit holder; and it includes any person, corporation, firm or association of persons contracting with such contractor to carry out, in whole or in part, the forest operations which such contractor undertook to carry out; (5) The words 'forest operations' mean and include the cutting of timber on public lands under a licence to cut timber, the removal of such wood from the forest, its floating or rafting and its descent by way of rivers or water-courses, or any one whatsoever of such operations.

"3. The Lieutenant-Governor in Council may appoint a commission called the 'Quebec Forest Operations Commission,' consisting of two members, one of whom to be designated as president. The members of such Commission shall be appointed during pleasure and their remuneration shall be determined by the Lieutenant-Governor in Council.

(Sections 4-12 describe the constitution and duties of the commission.)

"13. Every timber-limit holder or contractor must, before starting forest operations, submit to the Commission all the details contemplated in section 14 respecting the forest operations he wishes to undertake.

"14. The details of the forest operations contemplated by section 13 are such as concern: (1) The wages or salaries of employees, the method used in calculating such wages or salaries, the hours and duration of work and the mode of payment of such wages or salaries; (2) The quantity and quality of the food to be supplied to employees, whether such food be supplied as part of the wages or salaries of the employees or be paid for by the latter, or whether it be deducted from their wages or salaries; (3) The price to be charged for meals, living comforts, clothing, footwear, supplies, tools, tobacco and other articles to be furnished or offered for sale to the employees; (4) The amount to be deducted from the wages or salaries of employees for medical and dental attendance, postage, transportation or other services of any kind whatsoever; (5) The charges, fines, penalties or other deductions to be taken from the wages or salaries of the employees; (6) The nature, dimensions and sanitary conditions of the camps, rooms, tents, cabins, houses or other places to be furnished as a habitation or place of work for the employees, and of the storerooms, kitchens and eating rooms

or other places employed in the preparation, storing and distributing of the food; (7) The details of every contract, sub-contract, arrangement or agreement, in writing or otherwise, effecting the hiring of employees for forest operations; (8) The conditions in which the employees will have to work and the methods to be employed in the forest operations; (9) All other information respecting the forest operations which the Commission may ask for.

"15. The Commission may of its own initiative and must, if thereunto requested by the Minister of Lands and Forests, make investigation into the forest operations carried on by a timber-limit holder or by a contractor. Such investigation shall bear on all the matters contemplated in section 14 and on all matters connected with or incidental to forest operations.

"16. The Commission may authorize one of its members or any other person whom it may designate, to hold any investigation which the Commission is authorized to make under section 15. For the purpose of such investigation, the Commission, a member of the Commission, or any other person thereunto authorized, shall possess and exercise all the powers conferred upon a commissioner appointed under the Public Inquiry Commission Act (Chap. 8).

"24. Every employee who receives lower wages or salary than those contemplated in the details respecting forest operations, submitted under section 13, shall be entitled to claim the difference before any court of competent jurisdiction."

The City Council of Toronto presented two petitions to the Ontario Legislature, on February 21, the first asking for the enactment of a minimum wage law applicable to male employees, and the second requesting the provincial government to join in a movement toward the establishment of a Civil Re-establishment Commission for the purpose of preparing unemployed citizens for a return to employment.

The Minimum Wage Board under the Minimum Wage for Women Act of Nova Scotia has been reconstituted to consist of the following members: Mr. George A. Redmond, of Halifax, chairman; Mrs. Marion Murphy, of Sydney; Miss Alice Hatfield, of Yarmouth; Mr. William H. Ross, of New Glasgow; and Mr. George A. Smith, of Halifax. The two last-named members will serve for a period of three years, and the others for two years from the date of their appointment.

## ALBERTA COAL MINERS' WAGES SECURITY ACT

**T**HE following information was supplied by the government in the Alberta Legislature on February 20, in regard to the administration of the Coal Miners' Wages Security Act since its enactment (This act was passed in 1928, its provisions being outlined in the *LABOUR GAZETTE*, June, 1928, page 582).

Twenty-nine mines have defaulted in payment of wages since the enactment of the Act.

A total of \$29,731.56 was secured in the payment of wages from bonds and other security, due to the operation of the Act.

The sum of \$2,400 in wages was lost through there being no bonds or other securities available to insure payment of these wages. This does not include wages of defaulting mines who had exemption certificates from the Board of Public Utility Commissioners.

Two mines which had exemption certificates from the Board of Public Utility Commissioners, have defaulted. The amount of wages in these cases has not been determined.

The Coal Miners' Wages Security Act provides that every mine owner shall, on the fifteenth day of May in each year, deliver to the minister a statement of the total amount of wages paid during the preceding twelve months. If and when required by the minister to do so a mine owner must also deliver to him a statement showing the assets of the mine owner and his liabilities, and setting out

in detail all mortgages or charges against his assets as at the last day of the month preceding that in which the statement is delivered. On or before the first day of June in each year every mine owner must furnish a bond or other security to the satisfaction of the Minister in an amount equal to the largest amount paid by him for wages in one month during the previous twelve months, to secure the due payment of all wages payable by him during the then current period of twelve months. In lieu of a bond the minister may accept a deposit of a sum in cash which is to be invested and held by him as security for the due payment of wages. A fine of not less than \$100 and not more than \$1,000 and costs is provided for a mine owner who makes default in delivering the required statement, and, in default of payment of the fine, a term of imprisonment not exceeding three months. A fine of not less than \$1,000 or more than \$2,500 and costs is provided for failure to furnish the required bond and continuing to operate his mine with hired employees after such default. In default of payment of the fine a term of imprisonment not exceeding three months may be imposed. A mine owner may, upon ten days' notice to the Minister, apply to the Board of Public Utility Commissioners for a certificate of exemption, which the Board is empowered to grant on being satisfied that the mine owner has sufficient resources to insure the due payment of wages to all coal miners in his employ.

## WORKMEN'S COMPENSATION IN ONTARIO

### Provision for Pneumoconiosis and Grinders' Phthisis

**B**Y a proclamation published in the *Ontario Gazette*, February 24, subsection 3 of section 4 of the Act of 1933, amending the Workmen's Compensation Act (*LABOUR GAZETTE*, 1933, page 598) was declared to be in force as from March 1, 1934. In the original act, section 113 contains the provisions made in regard to industrial diseases. The legislation of last year replaced the earlier sections dealing with silicosis by new provisions defining silicosis and tuberculosis. Workmen disabled from silicosis where no tuberculosis is present were to be compensated on the same basis as workmen suffering from other industrial diseases. Where silicosis is complicated by tuberculosis, however, the basis for total disability was fixed at 50 per cent of average earnings. A workman ceasing to be employed in an industry in which he was exposed to silica dust must, under the amending Act, establish his claim within two

years after leaving such employment or six months after the passing of the Act, whichever period is longer, after which time the claim is barred. The Board may, however, allow any case due to uncomplicated silicosis which it considers should in justice be allowed. The time limit for disposing of outstanding claims was fixed at two years from the date of filing claim or six months after the passing of the Act, whichever is the longer period.

The subsection added to the Act in 1933, and now proclaimed as being effective as from March 1, 1934, reads as follows:—

(3) The said section 113 is further amended by adding thereto the following subsection:—

(12) The provisions of this section relating to silicosis shall apply also to pneumoconiosis and stone worker's or grinder's phthisis contracted during the course of employment in any of the processes in which pneumoconiosis and stone worker's or grinder's phthisis is compensable as set forth in Schedule 3.

## WORKMEN'S COMPENSATION IN SASKATCHEWAN

THE *Saskatchewan Gazette*, February 15, 1934, contains the text of Regulation 55 of the Workmen's Compensation Board, issued under the provisions of the Workmen's Compensation Act (Revised Statutes of Saskatchewan, 1930, chapter 252). The new regulation amends certain of the regulations issued in March, 1930, which were reprinted in the *LABOUR GAZETTE*, April, 1930, page 392.

### REGULATION 55

Regulation five is amended by substituting "2%" for "5%" wherever the term "5%" appears in the said regulation, and is further amended by substituting the word "two" for the word "five" where the word "five" occurs in the second last line of the said regulation.

Regulation six is amended by substituting the words and figures "two (\$2.00) dollars" for the words and figures "five (\$5.00) dollars" where they occur in the second last line of regulation six.

Regulations eight, nine and ten are amended by substituting "2%" for "5%" wherever it occurs in the said regulations.

The references above to "lines" refer to the regulations as they appear in the *Saskatchewan Gazette*.

The effect of the new regulation is as follows:—

In Regulation 5, the additional assessment imposed on employers failing to make returns giving an estimate of payrolls, is reduced from 5 per cent to 2 per cent of the ordinary as-

essment. The minimum additional assessment in such cases is reduced from \$500 to \$200.

In Regulation 6, for an employer's failure to transmit to the Board a statement of his estimated payroll for the current year, or for furnishing a false statement, was subject to a minimum payment of \$5 in addition to interest charges. This minimum payment is now reduced to \$2.

In Regulation 8 a similar reduction from 5 per cent to 2 per cent is made in the amount of the penalty for failure to pay within one month after notice thereof.

In Regulation 9, dealing with cases in which the adjustment of assessments shows that the actual payroll the preceding year was more than double the estimated payroll, the rate of interest to be charged for the past year is reduced by the new order from 5 per cent to 2 per cent of the difference between the true assessment and that charged on the estimated payroll.

In Regulation 10, making provision for cases in which payrolls were underestimated, the Board will, under the new order, make an allowance of 2 per cent (instead of 5 per cent) on the difference between the assessment actually charged, and that which should have been charged on the actual payroll.

## WORKMEN'S COMPENSATION IN QUEBEC

THE Quebec Workmen's Compensation Commission adopted recently Regulation 11, which was approved by the Lieutenant-Governor and published in the *Quebec Gazette*, February 24. The new regulation amends Regulation 2 by omitting the occupation described as "the removal of garbage, street cleaning, or the removal of snow and ice" from the list of industries that are excluded from the operation of the Act when less than six workmen are generally employed therein. It also amends Regulation No. 6 by adding the "removal of garbage, street cleaning, or the removal of snow or ice," to the list of industries that are subject to the Act only when they employ four or more workmen.

### Commission Retains Right to Choose Physicians

The Quebec Legislature, on February 14, rejected a bill to repeal the amendment made last year to the Workmen's Compensation Act taking away an injured workman's privilege of choosing his own doctor. The Hon.

C. J. Arcand, Minister of Labour, in opposing the bill, pointed out that the matter of selection of the doctor was largely one of administration, and that there were a number of considerations to be taken into effect. The information he had obtained from the Compensation Commission showed that, due to the change of last year, a saving of \$10,000 had been made in expenses for medical treatment, and furthermore the commission had been able to make special arrangements for expert treatment in Montreal by employing salaried doctors. He pointed out that the commission had issued a circular to all concerned pointing out that the workman must have a doctor of his own language, and the law also provided that where possible he was to be consulted as to the doctor.

### Minimum Indemnity Unchanged

The Quebec Legislature, on February 7, rejected a bill to restore the former rate of \$12.50, instead of the present rate of \$10, as the weekly minimum indemnity that may be

paid under the Workmen's Compensation Act (LABOUR GAZETTE, July, 1933, page 695). The Hon. L. A. Taschereau, provincial premier, said it was imperative that the Workmen's Compensation Commission should be self-supporting, and that last year's reduction had been made in view of a deficit of eight million dollars at the end of the previous year.

### New Industries Coming under Factories Act of British Columbia

By a proclamation published in the *British Columbia Gazette*, February 8, 1934, the undermentioned premises are added to Schedule A of the Factories Act (Revised Statutes of British Columbia, chapter 84), which gives a

list of the types of factories regulated by the provisions of the Act or orders thereunder. The additions are as follows: Airplane factories; alabastine and lime factories; artificial-flower factories; automobile factories; awning factories; basket factories; battery factories; cap factories; carpet factories; cereal-food factories; chain-works; cordage factories; dry-cleaning factories; hat factories; lamp-goods factories; macaroni and spaghetti factories; necktie-works; pattern-works; peanut-butter factories; peat-works; polish factories; printing-ink factories; rice-mills; roofing factories; salt-works; structural-steel and bridge works; tin-stamping works; upholstering factories; wineries; wire-rope factories; wood-working plants.

## CHILD WELFARE AND MOTHERS' ALLOWANCES IN SASKATCHEWAN

THE annual report of the Bureau of Child Protection of Saskatchewan for the fiscal year ended April 30, 1933, reviews the activities of the Commissioner of Child Welfare and the Superintendent of Old Age Pensions during this period. The report of the former outlines the procedure and methods employed in child welfare work noting in particular the policy of the Department in insisting on the local social agencies and relatives looking after dependent children, as far as possible, and in not allowing many to become charges on the state. The total number of wards at the end of the fiscal year, including those of the five Children's Aid Societies, was 1210—a decrease of 155 as compared with the previous year. Of the 1210 wards, 537 had either or both parents living; 113 were full orphans and 560 were illegitimate. There were 259 children who ceased to be wards during the year; 146 of these were legally adopted, 85 attained the age of 21 years, 11 were married, 10 were discharged by order in council and 8 died. Since the Child Welfare Department has been in operation, 4,081 children have been made permanent wards, and it is estimated that approximately the same number were placed in homes by the department without the necessity or formality of commitment.

Other phases of child welfare activity dealt with juvenile delinquency, mental defectives, legal adoption of children, children of unmarried parents, blind children, and the work of the Children's Aid Societies.

*Mothers' Allowances.*—Included under the jurisdiction of the Bureau of Child Protection is the administration of mothers' allowances in Saskatchewan. By the provisions of the Mothers' Allowance Act of 1922 (since incorporated with the Child Welfare Act) the

Legislature makes an annual grant, expended in monthly payments, in order to provide support, or partial support, for the dependent children under sixteen years of any woman who by reason of poverty is unable to take proper care of her child or children.

The report of the superintendent showed that on April 30, 1932, there were 2,372 families receiving assistance while on April 30, 1933, this total had increased to 2,511. This was largely due to the increase in "dependent mothers." "Under this heading is included the families of men who have been committed to jail for a period of not less than six months, and during the last few years an increase has been noticeable in the number of applications received from mothers whose husbands have been committed to jail for breach of the Excise Act. It would appear from correspondence and from reports of our inspectors that in many cases the husband deliberately breaks the law, knowing that during his absence in jail his wife and children will be cared for by the Government and he, himself, will receive his board and lodging from the same source. It is difficult to effectively deal with these cases as while there is very little sympathy due to the adult members of the family, this is a child-caring agency and we cannot allow the children to suffer." The superintendent recommends that in the interests of the children the Act be amended giving authority for the appointment of a responsible trustee to whom the cheques could be made payable, and who would be responsible for using the money for the benefit of the children.

The statistics indicate the following situation regarding Mothers' Allowances as at April 30, 1933: number of widows, 1,766; number of dependents, 611; number of guardians, 71;

number of deserted wives, 63; number of families receiving allowance, 2,511; number of children under sixteen years, 6,733; average paid per recipient, \$13.666; average paid per child, \$5.097. During the year, the amount paid in allowances was \$403,915; as compared with \$483,618 in the year previous.

*Old Age Pensions.*—Included also in the report is the annual review of the Old Age Pensions Branch. Information respecting old age pensions in Saskatchewan as well as for the whole of Canada is given quarterly in the *LABOUR GAZETTE*. The latest of these quarterly summaries appeared in the *LABOUR GAZETTE* for February, 1934, page 143.

### The Italian Corporations Act

On January 18 the Italian Chamber of Deputies unanimously adopted the Corporations Act, establishing corporations, each of which will represent a single great branch of production. A full account of this measure appears in *Industrial and Labour Information* (Geneva), February 12, 1934.

The Act provides that "the president of a corporation shall be a minister or under-secretary of state or the secretary of the National Fascist Party; such president shall be nominated by the head of the government, president of the National Council of Corporations. The decree establishing a corporation shall determine the number of members to compose its Council and the number of members to be designated by each of the associations which are grouped in the corporation. These designations are subject to the approval of the head of the government, to be given in a decree on the recommendation of the Minister of Corporations."

A ministerial report to the Senate on the Bill explained that it was intended to give full effect to the principles of the Labour Charter system approved by an Act passed in 1926 (*LABOUR GAZETTE*, January, 1926, page 64). The corporations, as now constituted, are intended to avoid the disadvantages of the occupational and "product" type of organization, and are believed to unite the advantages of both systems. For example, a corporation might be established for the whole textile industry, an enormous branch of production. But it might then be found necessary to set up a separate body for each of the different products of the industry—linen, silk, artificial silk, etc. In the same way a special committee for sulphur might be set up within the mining corporation, and special committees for nitrogen, dyestuffs, etc., within the chemical industries corporation.

The head of the government may order the joint meeting of two or more corporations for the study of questions which concern several branches of economic activity. Corporations in joint session will have, as far as these questions are concerned, the powers given to each separate corporation. The system of

organization provided in the Act—corporations for the great branches of production, "horizontal" sections for occupational groups, "vertical" committees for specified products, and joint sessions—will enable the corporations, it is claimed, "to adapt themselves to economic reality."

Section 7 of the Act, dealing with trade unions, reads as follows:—

"The associations grouped in a corporation shall become self-governing in trade union matters but shall continue to belong to their respective confederations in conformity with provisions to be issued by the Minister of Corporations."

The ministerial report, above mentioned, interprets this section as follows: "Section 7 was not the starting point for the development of trade associations in a new direction, but a return to origins. The Act of 1926 had founded its system on the occupational group and on trade associations of the first degree, intending the higher trade associations to be no more than co-ordinating bodies. But in practice the system had developed on completely opposite lines; the trade union, the primary association, which ought to have remained in constant and intimate touch with the individual, had lost its importance bit by bit and gradually atrophied, while the higher associations had grown steadily stronger and more flourishing. Yet the trade union itself was the bearer of the revolutionary idea and spirit, while the higher associations were essentially administrative and bureaucratic. Thus, in proportion as the occupational group had lost its vitality and the confederations had become more powerful, trade unionism had lost its revolutionary impetus and taken on more and more bureaucratic conservatism. Section 7 was a reaction against this tendency; it would certainly result in the return of trade unionism to the proud revolutionary spirit of its origins."

The Act empowers a corporation to draft rules for the collective regulation of economic relations and for centralized discipline in production. The Council of Corporations (the central body) may exercise regulating func-

tions in the economic field in fulfilment of two conditions, namely (1) that the associations concerned were in agreement to confer such functions upon it, and (2) that the head of the government had also given his consent.

The Act further empowers a corporation to fix, within its competence, rates for public utility supplies and services, and for the

prices of commodities offered to the public under privileged conditions.

The report claims that under the Act, "production is regulated, not against its will by an outside force, but by the corporation, that is to say by its members, the productive groups themselves." The corporative system is finally defined as "the producers' instrument of organic self-control."

## TRADES AND LABOUR CONGRESS OF CANADA

### Legislative Program Presented to Dominion Government

**T**HE Executive Council of the Trades and Labour Congress of Canada, and an associated delegation of Canadian representatives of affiliated national and international unions, presented to the Prime Minister and members of the Dominion government, on February 13, a memorandum containing a program of legislation recommended by organized labour represented by these organizations. The delegates included Tom Moore (president), James Simpson (vice-president), and P. M. Draper (secretary-treasurer), and a large number of other labour representatives.

The recommendations on the subject of employment and unemployment relief were as follows:—

#### Employment and Unemployment Relief

The denial of the right to work to several hundred thousands constituting the unemployed army in Canada creates a condition serious enough to warrant the use of the residuary power given to the Federal Government by the British North America Act to ensure peace, order and good government.

The proposals which we herewith submit seek to secure action in three ways.

First: By provision of work to eliminate unemployment.

Second: To adequately provide for the needs of those in want through unemployment, and

Third: Measures to cope with future unemployment in an organized manner with the object of preventing to the greatest possible degree its recurrence.

*Provision of Work.*—This, we believe, can best be accomplished by the initiation, in co-operation with provincial governments and municipal authorities, of building projects financed in such manner as to avoid creating additional burdens on the tax payers. Such action would provide immediate employment on the work undertaken and because of the wide ramifications of the building industry provide a stimulus to industries generally,

thus giving additional employment for numerous other workers.

Without entering into detail as to the many classes of building and construction projects that could be included in such a national program, particular attention is directed to the advantage which would accrue by encouragement of the clearing of slum areas by public authorities along with the provision of facilities for the obtaining of mortgages at low rates of interest over a long period of years by individual home builders.

As a further means of providing employment as well as in the interest of public safety steps should be taken to eliminate grade railway crossings by constructing either subways or bridges.

*Reduction of hours.*—To bring about any permanent improvement in the employment situation it is obvious that the hours of labour should be reduced commensurate with the increased productivity of machinery. In doing so the purchasing power of the workers must be maintained, as it is only by mass consumption that mass production is possible, without creating recurring periods of intense unemployment. We submit the government has a responsibility to lead in this direction and thus set an example to privately owned industry and therefore ask that on all government works and, as far as may be practicable in the purchase of all government supplies, the six-hour day and five-day week should be established as the maximum hours of employment and the wages paid should be such as to entail no reduction in the aggregate earnings of those employed.

To further advance the reduction of hours, as a national policy, efforts should be put forth to secure similar action on the part of provincial legislatures, especially where federal government funds are being expended.

*Unemployment Insurance.*—The request for the enactment of a national scheme of unemployment insurance toward which employers,

workers and the State would contribute is again reiterated. Promises held out that this matter would be definitely dealt with have not, so far, been fulfilled, although two Federal-Provincial conferences, which workers were led to believe were called primarily for the discussion of this subject, have been held in the last two years. The volume of unemployment existing is not, in our opinion, a sound reason for further delay in the enactment of this much needed legislation.

*Temporary Relief.*—While recognizing that the payment of direct relief is no remedy for unemployment, but on the contrary does, in some instances, lead to an aggravation of the situation, nevertheless provision of this character has been, and still is, essential in every part of the Dominion. The action of your Government in co-operating with the provinces and municipalities in the payment of this "dole" has been appreciated though we have reason to know that in many quarters the relief provision has not been adequate and we believe that the Dominion Government should insist upon at least a minimum standard being observed. We note with commendation that agreement has been reached to continue participation with the provinces in the payment of direct relief in addition to the undertaking of a program of public works and we would urge that this policy be continued, so long as the need for direct relief exists.

*Relief Camps.*—At our last convention vigorous protests were made in respect to certain phases of relief camp activities. In some instances works are being undertaken of a permanent construction character on the plea that they would not otherwise have been carried out. All such works should, in our opinion, be constructed in conformity with the provisions of the Fair Wage Act, 1930.

One of the declared objects of the establishment of relief camps, namely to relieve job competition in industrial centres, is being defeated by camps being established in or adjacent to cities such as Kingston, Trenton, Toronto, etc. This policy has resulted in intensifying the unemployment problem for married resident workers who now find themselves in competition for the few available jobs with single men brought in to the district for camp employment.

The cash allowance given to these men over and above the cost of their maintenance in camp is totally inadequate and should be increased sufficiently to enable these workers to better prepare themselves to be self-sustaining while subsequently seeking employment in their respective occupations.

Under present conditions camp workers have no present or immediate prospective purchasing power and to that extent camp projects are of no assistance towards reducing the number of unemployed.

*Employment Service Council.*—Last year we directed attention that no meetings of the Employment Service Council had been held since August, 1930. We believe this Council, established under the provisions of the Employment Service Co-ordination Act of 1918, can be of great service in advising in respect to the many phases of the employment and unemployment problems and would therefore urge the calling together of the members of this Council at an early date.

*National Planning.*—The fact that so much poverty and misery exists in the midst of plenty is evidence that our present industrial and economic machinery is not functioning in a manner that best serves the interests of the people as a whole. Uncontrolled competition, as so ably stated recently in the Senate by Rt. Hon. Arthur Meighen, "when applied between gigantic units of capital in the form of machinery, only determines their destruction." The most serious ill effects of this falls upon the wage earner and the small investor. It is to avoid conditions of this kind and to build up a more ordered and beneficial economic and industrial structure that we urge steps be taken towards the establishment of codes of fair practices in industry. These to be along lines most suitable to conditions existing in Canada.

A necessary step in this direction is the establishment of an Economic Council whose main purpose would be to give constant study to the economic changes taking place in industry and agriculture, especially in respect to the questions of distribution, purchasing power, displacement of labour by machinery and similar matters.

#### British North America Act

With reference to the British North America Act, the memorandum called for a complete revision of this enactment "so as to bring its provisions into harmony with present day conditions." Continuing, the memorandum stated:

"The difficulties in reaching agreement for uniform legislation and simultaneous action to enforce the same in all provinces has been clearly demonstrated by the meagre results of interprovincial conferences held during the past two years. To overcome these difficulties and give undisputed authority to the Federal Government to deal with matters affecting the Dominion as a whole and particularly in

respect to such important subjects as unemployment insurance, minimum wage laws, regulation of hours of labour, etc., we again submit that this matter should be given immediate consideration."

### **Banking and Credit**

The section of the memorandum dealing with banking and credit and interest rates was a summary of the brief submitted by the Trades and Labour Congress to the Royal Commission on Banking, given in the *LABOUR GAZETTE* for October, 1933, page 1003.

### **Fair Wage Act**

The memorandum requested that the Fair Wages Act be amended by repealing Clause 2, Section 3, which exempts from its provisions certain classes of work formerly done on the job but now often carried out in established work-shops. It also asked that the Act be extended so as to cover all undertakings financed wholly or in part by Dominion Government funds, and to companies or commissions operated by or on behalf of the Government. In addition it was urged that effect be given to Section 5 which makes provision for regulations to govern many phases of enforcement and "which are essential to prevent abuses."

### **Road Transportation**

The memorandum noted that "some measure of agreement has been reached between the Federal and Provincial Governments for the more effective control of road transportation with the object of protecting the public who use the highways and eliminating the unfair competition with railway transportation systems." While it was recognized that the responsibility to give effect to such decisions rested with the respective provincial Legislatures, yet it was hoped that the Federal Government would continue its active interest and support "towards ensuring effective control over commercial road transportation throughout the Dominion."

### **Other Requests**

That provision be made for labour representation on national administrative boards.

That the Old Age Pension Act be amended to reduce the qualifying age from 70 to 65 years; and that the Federal Government assume the full cost of pensions.

That the Canada Copyright Act be amended to secure greater employment protection for printers.

That more stringent regulations be enforced governing the description of materials used in the manufacture of paints, etc.

That the salary deduction of civil servants be restored and that superannuation be established for "prevailing rate employees."

That provision be made under the Canada Shipping Act whereby "no ships other than a British ship of Canadian registry shall engage in the coastal trade of Canada."

That the provisions of the Criminal Code defining and legalizing peaceful picketing be restored, and that section 98 be repealed.

That in event of an outbreak of hostilities "there should be no declaration of war by Canada until a referendum of the people to sanction such action has been taken."

That there be no modification of the present immigration restrictions, and no encouragement be given to schemes of subsidized immigration.

That sweepstakes and lotteries be legalized under government control and supervision.

The Prime Minister assured the delegation that the majority of the proposals would be discussed in Council, pointing out however that in some matters, such as the amending of the British North America Act, provincial autonomy was involved, while in others, such as the Old Age Pension request, the economic condition of the country was an important factor.

The Vancouver and New Westminster District Trades and Labour Council, on February 6, adopted a resolution, submitted by Local 213, International Brotherhood of Electrical Workers, recommending that the Provincial Government adopt the Dominion Electrical Code as a standard for all electrical installation in British Columbia. The resolution opposed a proposal which had been submitted to the provincial government by contractors and others asking that the Electrical Energy Inspection Act be amended to require that electricians be licensed. The union held that the proposed amendment would place the control of all electrical work in fewer hands.

An association of employers of workers in the lumbering industry in the province of Quebec to be known as the Quebec Lumbermen's Accident Prevention Association, Incorporated, has been set up with head offices in Quebec, to carry on the work of accident prevention in lumber camps, saw, shingle and lath-mills, wood manufacturing plants, lumber yards and plants where the creosoting of timber is carried on.

## NEW BRUNSWICK FEDERATION OF LABOUR

The 21st annual convention of the New Brunswick Federation of Labour was held in Fredericton on February 13, 14 and 15 with an attendance of 36 representatives, including 4 fraternal delegates. In his annual report and address, President Jas. A. Whitebone referred to the "disgraceful conditions under which men are forced to work in the woods and sawmills of this province." Commending Premier Tilley for his effort to secure from the lumber operators information concerning wages paid and hours of labour, he urged that a searching investigation be instituted at once. The president recommended that the Federation should continue their efforts towards securing unemployment insurance, old age pensions, mothers' allowances, minimum wages, and child protection.

The report of the executive committee further touched on conditions in the lumber industry, claiming that it was impossible for the employees to earn more than 40 to 50 cents per day. It also recommended that the Federation continue its efforts toward a six-hour day and five-day week.

Hon. L. P. D. Tilley, provincial premier, and Hon. Dr. H. I. Taylor, Minister of Health and Labour, addressed the convention. The latter spoke of the successful efforts of his department to reduce the mortality rates of the province, but stated it was difficult to foresee what would be the result of present economic conditions with so many undernourished children.

Premier Tilley referred to the statement of the president on conditions in the lumber industry. He declared that the situation was due to the keen competition with Russian lumber in Great Britain, and also to the unfavourable rates of exchange in the money market. Another difficulty was that there were too many jobbers or middlemen in the pulpwood industry, with the result that the workers were not getting their fair share in wages. In his opinion about 75 per cent of the operators did the best they could for their workers, but the other 25 per cent did not. He had sent out a questionnaire seeking information on the conditions of the workers, and the Government had a Bill drafted which would be introduced in the Legislature next week, which he thought would meet the situation.\*

Other speakers at the convention were W. L. Best, Dominion Legislative representative of the B.L.F.E.; J. L. Labreche, Dominion

Legislative representative of the B. of R.T.; F. T. Caine, chairman, and S. H. Shaw, secretary of the Joint Provincial Legislative Board of the Running Trades; and E. R. Steeves, vice-chairman of the Workmen's Compensation Board. Dealing with unemployment on the railways, Mr. Best stated that in 1929 there were 189,600 men employed while in 1933 there were 105,000.

### Resolutions Adopted

The following resolutions were adopted:—  
That a housing program be made a part of the proposed national recovery plan.

Adoption of a uniform ballot in federal, provincial, and municipal elections.

Restoration of free school books.

That the federal government be urged to appoint a fair wage officer for the Maritime Provinces.

Federal Government operation and control of the Central Bank.

Legislation providing reduction of interest rates on mortgages.

Moratorium on mortgages on homes and farms.

Opposing St. Lawrence waterways project.

Against the issuance of licences to motor buses and trucks on routes paralleling railways.

Requesting the provincial government to endorse national unemployment insurance.

Enactment of minimum wage legislation for men, women, and children.

Redistribution of legislative representation according to population.

Establishment of a provincial Department of Labour.

That the Provincial Government inaugurate a scheme whereby a person in debt could pay a police magistrate a portion of his income which would be apportioned among his creditors, the debtor then not being liable to prosecution for debt.

Opposing legislation which if passed would give property owners owing up to two years' taxes the right to vote.

Repeal of a section of the Theatres Act which calls on moving picture machine operators to notify the Censor Board of films exhibited without the Board's approval.

Adoption by legislation of the six-hour work day and the five-day work week.

Requesting legislation which would provide a fair or minimum wage in the lumber industry.

Urging limitation of the power of the Senate to that of the House of Lords in Great Britain.

\* Reference to this bill is made on page 236 of this issue.

Requesting the Provincial Government to take steps to make it easier for small lumber operators in Northumberland County to secure cutting privileges on suitable Crown lands.

Amendments requested under the Workmen's Compensation Act included: Restoration of the old definition of "average earnings"; that strains and sprains be treated as accidents under the Act; compensation to injured workmen who have not made application to the Board until the 6 months' limit has expired; that the minimum compensation be increased from \$6 to \$12.50 per week; removal of the \$2,500 limit of the Board's liability in permanent partial disability cases.

The election of officers resulted as follows: President, J. E. Tighe, Saint John; first vice-president A. W. Jamieson, Moncton; second vice-president, J. B. Johnston, McAdam; third vice-president, J. H. Wallace, Reynolds; secretary-treasurer, Geo. R. Melvin, Saint John.

#### **Requests Presented to Provincial Government**

During the last day of the convention Federation representatives submitted to the Premier and members of the Executive Council its memorandum of requests for legislation. Many of the recommendations were based on

resolutions adopted at the convention and which are summarized above. Others were matters which had been presented at previous annual interviews. The additional requests, not included in the convention resolutions, were as follows:—The securing by the municipalities of the full benefits of the distribution of electric power from the provincial Hydro system; amendments to the Factories Act with a view to bringing it up to a standard comparable with similar Acts in the Dominion; appointment of a properly qualified boiler inspector, and more adequate boiler inspection; adoption of a Fair Wage Act; urging upon the Federal authorities as an employment measure the rebuilding of the shipping berths at Saint John; appointment of an examining board for the licensing of motion picture machine operators; proclamation and putting into force of the Electrical Energy Act, providing for regulation of wiring, etc.; amendment of the Schools Act to provide for compulsory school attendance up to sixteen years of age.

Dealing with the Old Age Pensions, Mothers' Allowance and Minimum Wage Acts, the memorandum stated that while the financial difficulties of the government were realized yet the need of putting such legislation into force was imperative.

### **Brotherhood of Railroad Trainmen**

A delegation representing the Brotherhood of Railroad Trainmen presented to the government of New Brunswick, on February 14, a memorandum of suggestions for legislation in the provincial field. The delegates included J. H. Cain, Moncton, chairman; S. H. Shaw, Saint John, secretary; J. L. Labrèche, Ottawa, and William L. Best, Ottawa. The Hon. L. P. D. Tilley, premier, with other members of the provincial government, received the delegates, promising consideration of their proposals, which were in part as follows:—

That all buses and trucks be placed under the control, administration and supervision of a transport commission, requiring operation under conditions similar to those imposed on the railways, especially with regard to the fixing of rates, tariff charges, accommodation and facilities for passengers and shippers;

That immediate measures be taken for the elimination of destructive competition caused by duplicating highway services;

That all common carriers using the highway for revenue purposes be on a basis commensurate with the use they made of the highways;

That no bus or truck be permitted to operate on the highway for revenue purposes where adequate transportation facilities already exist or where the railways can or are willing to provide these facilities;

That commercial motor vehicles be restricted to a reasonable maximum tonnage;

That uniform legislation be enacted to ensure reasonable standards in regard to working conditions, including wages and hours of labour in highway motor vehicle operation.

### **B. C. Executive of Trades and Labour Congress**

Members of the British Columbia executive of the Trades and Labour Congress of Canada recently submitted their requests for legislation before the Provincial Government. Prefacing their recommendations, the executive asked for the "discouragement of all efforts

put forward to reduce wages and salaries, and of policies of economies and retrenchment, as these only intensify the depression, being immediately passed on to the merchant and others whose lessened business results in more unemployment."

Among the objectives sought in legislation were the following:—

Establishment of the six-hour working day based on the five-day week;

Unemployment insurance on a contributory basis;

Restoration of wage cuts in the civil service;

Extensive public works with trade union wages, as a stimulus to employment;

Stricter enforcement of the Minimum Wage Act and the Hours of Work Act;

Moratorium legislation along the lines of the Manitoba Debt Adjustment and Orderly Payment Act, with more protection for the unemployed home owner;

Sickness insurance;

Increased wages for unemployed single men in relief camps;

Broadening, rather than curtailment, of educational opportunities;

Amendment of the income tax in the lower wage brackets, with exemptions up to \$3,000 per year;

Increasing the amount of workmen's compensation under the Act;

Prohibition of the imposition of tax penalties by municipalities and of interest or arrears of taxes at rates higher than that paid by them to banks;

Compulsory automobile insurance;

Strict regulation of truck and bus transportation;

Protective legislation for fishermen and a nominal figure for chauffeurs' licences.

The cabinet promised consideration of these requests. The executive comprised Messrs. Percy R. Bengough, C. E. Herrett, and R. W. Munn.

### Halifax District Trades and Labour Council

At a recent special meeting of the Halifax District Trades and Labour Council, the following program of proposed legislation was drafted for submission to the Nova Scotia Government:—

Increases under Compensation Act including raising of payments from 60 to 66 per cent of weekly wages.

Appointment of inspector to enforce Minimum Wage for Women Act regulations.

Enactment of provincial Fair Wage Act to insure fair standards of wages being paid on all government work and government subsidized projects in operations on land and water.

Immediate appointment of a commission under the provincial Housing Act, that a start might be made towards relieving distressing housing conditions in Halifax and other communities.

Appointment of representatives of organized labour on all boards and commissions dealing with matters affecting labour.

Re-enactment of the legislation to prevent foreclosure of mortgages of home owners during the industrial slump.

Amendment of Mothers' Allowances Act, to insure payment of allowances to mothers with dependent children under sixteen years of

age, irrespective of whether they have other children over that age.

Appointment of men with practical experience in the construction and repair of steam boilers, as steam boiler inspectors.

That the scope of the Labour Act be widened so as to take in an Operating Engineers Act, Building Trades Protection Act and Steam Boiler Act, including regulations for the protection of persons engaged in compressed air operations.

That a board of examiners be established in the Motor Vehicle Department to examine applicants thoroughly for drivers' and chauffeurs' licences as to their eyesight and physical and mental ability before permission is given for examinations as to their driving ability.

Enactment of special legislation to provide workmen's compensation to the widow of the late John Hughes, who died from an industrial disease. Through ignorance of the law, the widow had not made application for compensation until after the time limit for applications had expired.

Appointment of additional factory inspectors, one to be a woman. These inspectors to see to the more rigid enforcement of the act in Halifax and other centres.

### Imperial Service Medals for Canadian Employees

The Imperial Service Medal, bearing the inscription "For Faithful Service," is awarded to civil employees in the various parts of the Empire on their retirement after service of twenty-five years. The honour is restricted to those who are not eligible for companionships

in the Imperial Service Order, which was instituted by King Edward VII in 1902.

The following list of employees of the Dominion Government have recently been awarded Imperial Service Medals by His Majesty the King.

*Post Office Department—*

Letter Carriers: Pence Flaherty, London, Ontario; James Albert Wilson, Toronto, Ontario.

*Department of Railways and Canals—*

Car Inspector: Edmund Smith Allen, Halifax, N.S.

Painter: Melvin Stanfield Armour, Moncton, N.B.

Machinists: William H. A. J. B. Banks, Moncton, N.B.; Emile Dubé, Riviere du Loup, Quebec; Joseph Romuald Raymond, Riviere du Loup, Quebec.

Sectionmen: Joseph Biron, Manseau, Quebec; William Edgar Hicks, Sackville, N.B.; William Rafter, Windsor Junction, N.S.

Carpenters: Joseph Jacques Bourgeois, Moncton, N.B.; William Wilson, Halifax, N.S.

Pipefitter: Maurice Bourgeois, Moncton, N.B.

Constables: Frederick Ralph Brownell, Amherst, N.S.; George Walker Cameron, Halifax, N.S.

Section Foremen: Richard Burhoe, Boundary Creek, N.B.; Joseph Alphonse Ferland, Lemieux, Quebec; Arthur Albert Geizer, Rockingham, N.S.; George Hubbard, Derby Junction, N.B.; Philippe Lemay, Manseau, Quebec; Angus Miller, Richmond, N.S.; James Robert Weir Murdock, Truro, N.S.; Frank Power, Nelson, N.B.; Charles Henry Teed, Wentworth, N.S.; Sterling Trevors, Beaver Brook, N.B.

Conductors: Joseph Caron, Levis, Quebec; Harry Burton Hanes, Halifax, N.S.; James Henry Johnstone, Stellarton, N.S.; Francois Symphorien Lapointe, Riviere du Loup, Quebec; Walter Scott Long, South Devon, N.B.; Alphonse Martin, Riviere du Loup, Quebec; Hugh McDorman, Stellarton, N.S.

Second Cook: Heber Amasa Carson, Moncton, N.B.

Vatman: Michael Thomas Casey, Moncton, N.B.

Station Agents: Anselme Roméo Coté, St. Valier, Quebec; Theodore Porter Moffatt, North Sydney, N.S.; Alphonse Routhier, St. Alexis, Quebec; Joseph Charles Roy, Charny, Quebec; David Hibbert Webb, Oxford, N.S.

Foreman: Amasa Weldon, Moncton, N.B.

Assistant Foreman: Isaac Newton Coy, Moncton, N.B.

Carmen: James Merritt Crossman, Moncton, N.B.; James Arthur McGrath, Halifax, N.S.; Sterling Mitchell, Halifax, N.S.; Rupert Noble Smith, Moncton, N.B.

Carman's Helper: Philippe Melanson, Moncton, N.B.

Dining Car Steward: Edgar Flemming, Halifax, N.S.

Brakeman: James Joseph Hachey, Newcastle, N.B.

Enginemen: Richard Griffin Jefferson, Moncton, N.B.; William Stephen Matthews, Newcastle, N.B.; Edgar Thomas Mitchell, Joffre, Quebec; Luther Edward Starratt, Truro, N.S.; Harry Dixon Thompson, Stellarton, N.S.; James Albert Wiles, Truro, N.S.

Locomotive Foreman: John Adams Johnson, Sydney, N.S.

Locomotive Firemen: Patrick Keating, Newcastle, N.B.; Arthur Lamontagne, Joffre, Quebec.

Train Despatchers: John F. R. McMichael, Moncton, N.B.; James Joseph Trainor, Charlottetown, P.E.I.

Yardmaster: Angus Probert, Truro, N.S.

Boilermaker: Camille Dominique Sonier, Moncton, N.B.

Station Porter: Frank Taylor, Halifax, N.S.

Lampman: Edouard Telesphore Therrien, Charny, Quebec.

## **Grants to New Brunswick Fishermen to Meet Low Prices of Fish**

The Hon. L. P. D. Tilley, premier of New Brunswick, speaking in the provincial Legislature on February 14, stated that arrangements had been made as part of the relief expenditure shared in by the Dominion Government during the past year, to give direct to the fishermen in Charlotte and Gloucester counties a grant of 20 cents per hundred pounds of green hake caught. This was the result, he said, of representations being made that while there was a good supply of that fish the price was so low that fishermen could not live on the returns. An arrangement was made at the instance of the superintendent of fisheries at Campobello whereby each man's catch could be weighed and accurately recorded, the

dealers who bought them giving certificates which were subject to inspection by both Dominion and Provincial officers. The dealers paid twenty per hundred pounds to the fishermen and when the certificates were forwarded to the Department of Lands and Mines the bonus of twenty cents was paid. In this way \$13,000 was paid out in such bonuses.

In regard to colonization, the Premier stated that the Department of Lands and Mines had last year approved of six hundred and seventy-eight lots for new settlers and had helped to provide seed and roads for them. To enable these new settlers to develop their districts \$25,136.13 had been spent upon colonization roads, scattered through the North Shore counties.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### 65th Session of the Governing Body

The Sixty-fifth Session of the Governing Body of the International Labour Office was held in Geneva from January 22 to 24, Dr. W. A. Riddell, Canadian Advisory Officer accredited to the League of Nations, representing the Government of Canada.

*Maritime Conference in 1935.*—After discussing the report of the discussions of the Joint Maritime Commission, which had held its Tenth Session at Paris in December, the Governing Body decided to call a Special Maritime Session of the International Labour Conference immediately after the General Session in 1935, when the second discussion will be undertaken of the four questions relating to the work of seamen on which the first discussion took place at the Special Maritime Session in 1929. These four questions are:

(1) regulation of hours of work on board ship;

(2) Protection of seamen in case of sickness (including the treatment of seamen injured on board ship), i.e.; (a) the individual liability of the shipowners towards sick or injured seamen; and (b) sickness insurance for seamen;

(3) promotion of seamen's welfare in ports; and

(4) establishment by each maritime country of a minimum requirement of professional capacity in the case of captains, navigating and engineer officers in charge of watches on board merchant ships. The question of holidays with pay was also placed on the agenda of this special session.

*Agenda of 1935 Conference.*—The Governing Body decided that agricultural workers should not be included when the question of holidays with pay, which is an item on the agenda of the Nineteenth (1935) Session, is discussed by that meeting. Other items to be included in the agenda of the 1935 Session are: unemployment among young persons; and recruiting of native labour.

### "International Survey of Social Services"

The above is the title of the latest volume published this month, in *Studies and Reports* (Series M, Social Insurance, No. 11) issued by the International Labour Office. In it the facts relating to the organization of social services and their cost have been brought together for the first time on an international scale. An introductory chapter describes the steps which led up to the compilation of the volume and explains the methods adopted by the Office. This is followed by a series of

monographs on the work done in 1930 (the latest year for which it has been possible to collect the material) by social services in the following countries: Australia, Belgium, Bulgaria, Canada, Czechoslovakia, Denmark, Finland, France, Germany, Great Britain, Hungary, India, the Irish Free State, Italy, Japan, Luxembourg, the Netherlands, Poland, Rumania, Spain, Sweden, Switzerland, the Union of South Africa, and Yugoslavia.

Each monograph begins with population statistics drawn from the most recent census returns. Then comes a succinct account of the national legislation relating to social insurance, compulsory and voluntary, together with figures showing the number of persons insured, the income and expenditure of insurance institutions, their assets and their balance sheets. Next, a similar survey is made of the services responsible for social assistance. This is followed by an analysis of the national legislation relating to housing, with details showing the number of dwellings built with the help of the public authorities, the number of persons for whom accommodation was thus provided, and the grants made for this purpose. The last two parts of each monograph are devoted to family allowances and holidays with pay, and include an outline of the relevant legislation and a summary of the results achieved.

### Wages and Cost of Living Statistics

The first session of the new Committee of Statistical Experts was held at Geneva from December 12 to 15, under the chairmanship of Mr. Huber (France). This Committee was appointed by the Governing Body at the request of the last International Conference of Labour Statisticians, in order to help the Office in its work of developing and publishing wages and cost-of-living statistics.

The committee considered the following principal points: the best methods to be adopted in making international comparisons of the cost of food, of rents and of factors other than wages which may be considered as part of the worker's remuneration.

A bill to amend the Public Health Act, now before the Ontario Legislature, contains a section which would permit the establishment of health units without regard to municipal or county boundaries. The Hon. Dr. J. M. Robb, Minister of Health, explained that by the merging of units municipalities could prevent overlapping and effect economies, and that large units could more easily afford a full-time health officer.

## EMPLOYMENT CONDITIONS IN CANADA AT THE END OF FEBRUARY, 1934

### Reports of Superintendents of the Employment Service

THE employment situation at the end of February, 1934, was reported by the Superintendents of the Employment Service to be as follows:

There was little activity amongst farmers in the Maritime Provinces, except cutting of firewood but getting it out of the woods was rendered difficult owing to the depth of snow. Storms greatly lessened fish catches and many varieties were quoted at higher figures. Unsettled weather also retarded logging in some districts, although, where possible, much material was being moved, but portable sawmills were working early and late in the manufacture of spool rods and long lumber. The majority of coal mines in the New Glasgow area operated from four to six days per week, while those in Cape Breton and vicinity worked from two to four and a half days. Food, confectionery and textile manufacturers reported business as fair, but some slackness prevailed in sugar refineries and in the iron and steel industry, particularly at New Glasgow. At Sydney, some of the mills were working double shifts. Very few contracts were under way in building construction, but numerous men found employment on relief projects and in snow shovelling. Traffic by rail and water, both passenger and freight, was heavy, but many roads were blocked for auto transport, due to heavy snow. Trade showed some improvement. There was a steady demand for charworkers and domestics in the women's section.

Farming in the Province of Quebec was quiet, nor was there much activity reported in logging and mining. Manufacturing showed little change. In Montreal, the boot and shoe industry and rubber trades were less busy and clothing was only fair. In Quebec City and Three Rivers, some of the factories were working on reduced time, although paper at the latter point maintained its advance of the previous months. Hull also noted some improvement in paper and match factories. Construction remained quiet, except at Rouyn, where advance work for the erection of a transmission line was underway. Snow removal at all points provided the chief source of employment. Transportation and trade were quiet. There were many calls for domestics and charworkers in the women's sections and plenty of applicants were available.

Considering the recent severe weather conditions, the demand for experienced farm workers in the Province of Ontario was well main-

tained and prospects appeared brighter as enquiries came in from farmers requiring men for work at a later date. Orders in logging which consisted mostly of teamsters, loaders and general bushmen, were largely for replacement. The great depth of snow in the woods hindered operations to a certain extent, but it was expected that the spring drive would absorb many men and while this work would not continue throughout the summer, it would prove a buffer between the jobless and the unemployment situation at a time when new work is developing. Fishing in Ontario was reported as being fairly brisk, with a number of men employed on the various lakes in the Port Arthur district. Activity in the mining industry remained steady, only the temporary impassibility of roads preventing further development of mining property. On the whole, gradual improvement continued in manufacturing. Firms which have been busy maintained good production and staff levels and others were gradually re-hiring former employees. Textiles were particularly busy, while iron and steel companies, foundries and manufacturers of auto parts and accessories reported an advance. Boot and shoe factories were also working steadily and the rubber industry was holding its own. Railways showed decidedly better conditions with employees being taken back at several divisional points, some of these men having been laid off for three years. Building construction had been badly hampered by severe weather, but prospects for the near future were brighter. Highway construction continued where possible and furnished employment for a large number of men. A surplus of applicants for all domestic positions, other than cooks and cooks-general, was registered in the women's domestic section, but industrial orders for female help were somewhat greater.

There was no demand for farm help in the Prairie Provinces, outside of unemployment relief placements. Logging continued active with a scarcity of experienced men in some localities. The mining industry showed a slight improvement, but conditions were far from satisfactory. Little change was noted in manufacturing, quietness predominating. No new work of any importance was underway in building construction, but several undertakings were contemplated and if these materialized a better situation would result. Rotation of employment on the various relief jobs continued and was the chief source of work. Trade

was fair, with collections difficult. In the women's section conditions were somewhat brighter, a slight decrease in the number of applicants for work being recorded at Winnipeg, with a corresponding increase in the demand for help.

Quietness prevailed in farming in British Columbia. Work was still being carried on by growers in the orchards, but very little extra help was employed and packing houses only had small crews at work. Logging, but for one or two districts where a strike was in evidence, showed improvement and a number of sawmills and shingle mills were operating steadily. Min-

ing was active, except at Nanaimo. Manufacturers were very optimistic at Victoria about business prospects, although little change had been noted up to the present. Building construction was quiet, with only relief camps as an outlet for all surplus labour. The drydock and shipyard were busy at Prince Rupert, but quiet at Victoria. Casual work on the waterfronts at both these ports and also at Vancouver was fairly heavy. In the women's section the surplus of applicants continued with wages for domestic service for the most part, exceptionally low.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN JANUARY, 1934

THE following information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on February 1 was 8,463, the employees on their payrolls numbering 846,943 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for January was 1,728 having an aggregate membership of 149,630 persons. It should be

understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

### (1) Employment Situation at the Beginning of February, 1934, as Reported by Employers

Employment on February 1, 1934, showed decided recovery from the seasonal contractions indicated at the beginning of January, according to data tabulated by the Dominion Bureau of Statistics from 8,463 firms whose payrolls aggregated 846,943 persons, compared with 820,998 in the preceding month. This increase of 25,945 workers or 3.1 per cent since January 1, was the largest noted on February 1 in the years of the record, which commences with 1921; the greatest gains made by the firms reporting for February 1 in previous years were those of 25,204 and 16,821 in 1923 and 1925, respectively. The recovery on the latest date, therefore, was decidedly more than seasonal, so that both the crude and corrected indexes show an upward movement; the improvement compares favourably with the declines recorded at the beginning of February

in the preceding three years. The index, based on the 1926 average as 100, rose from 88.6 on January 1 to 91.4 at the beginning of February, as compared with 77.0 at the same date in 1933. On February 1 in the preceding twelve years of the record, the index was as follows: 1932, 89.7; 1931, 100.7; 1930, 111.6; 1929, 110.5; 1928, 162.0; 1927, 96.6; 1926, 91.8; 1925, 87.1; 1924, 91.7; 1923, 90.6; 1922, 79.9 and 1921, 91.2.

An analysis of the returns by industries shows that the most pronounced recovery on the date under review was that of a seasonal character in manufacturing, in which there was an increase of 20,875 workers, or 5.2 per cent; this improvement was greater than the average indicated on February 1 in the thirteen preceding years for which data are available. Within the group of factory employment, the

iron and steel, textile, leather and lumber industries showed the largest gains. Among the non-manufacturing industries, logging, coal and metallic ore mining, wholesale trade, highway and railway construction also recorded heightened activity. The increased employment in railway construction and maintenance was mainly caused by snow-clearing operations following severe storms; that on highways and streets also partly reflected this factor, particularly in the cities, but was due in greater degree to an increase in those working in the unemployment relief camps. The numbers added to staffs in construction

### Employment by Economic Areas

Improvement was recorded in all economic areas except the Prairie Provinces, that in Ontario being most pronounced.

*Maritime Provinces.*—The trend of employment in the Maritime Provinces has very frequently been downward at the beginning of February in the thirteen years for which employment data are available. On February 1 of the present year, however, activity showed a considerable increase, 2,943 persons having been added to the reported payrolls; this was the greatest gain yet indicated at the begin-

### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

amounted to 11,357 men, of whom nearly 70 per cent were taken on in the highway construction and maintenance group, including snow-sweeping in the municipalities and elsewhere.

Declines were indicated on the whole in the remaining groups; transportation, services and communications reported moderate reductions in personnel, while there were large seasonal losses in retail trade, succeeding the activity of the holiday season. The contraction in retail establishments on February 1, like the gain in the preceding month, exceeded the average.

ning of February. Statistics were received from 588 firms, employing 71,302 workers, compared with 68,359 at the beginning of January. Manufacturing, coal-mining and railway construction reported substantial improvement. Within the manufacturing group, pulp and paper, iron and steel and food factories showed large gains; those in the construction industry were due to snow-clearing operations necessitated by the severe storms. On the other hand, logging camps recorded pronounced curtailment of operations, and trade was seasonally slacker. A large falling-off had been recorded on the same date in

1933, when the level of employment was decidedly lower; in fact, the index on the date under review, at 101.3, was higher than in any other month since January 1, 1932.

*Quebec.*—Contrary to the unfavourable movement recorded in Quebec on February 1 in 1931, 1932 and 1933, there was an increase on the date under review, when the working forces of the 2,049 co-operating employers aggregated 240,295, as against 234,040 on January 1. Most of this gain occurred in manufacturing, largely in leather, textile and iron and steel factories; transportation and construction also afforded more employment, the gain in the latter being mainly due to track-clearing operations on the railways, following the heavy snow falls. Logging, communications, services and retail trade reported declines, of which those of a seasonal character in trading establishments were most pronounced. The general index on February 1, 1934, at 88.5, compared favourably with that of 75.7 indicated at the same date last year; considerable curtailment had then been reported.

*Ontario.*—Substantial improvement was shown in Ontario, where decided recovery was made in manufacturing, particularly in iron and steel, textile, lumber and leather factories; logging, mining, services, wholesale trade and construction also recorded con-

siderably greater employment. Part of the gain in construction represented the employment of extra forces in road and railway maintenance due to snow removal, while there were also important increases in the number of persons employed at the unemployment relief camps. Data were received from 3,737 firms employing 360,281 persons on the date under review, as compared with 344,412 at the beginning of the year. Of this increase of 15,869 workers, some 6,500 were reported as added to the forces in the highway construction group; while it is not possible to segregate those on relief works, it is likely that the majority of these additional workers were engaged on undertakings for the relief of unemployment, although extensive snow-cleaning operations also occasioned large extra staffs. Little change in the general situation had been noted on February 1, 1933, when the index, at 78.9, was considerably below that of 95.3 indicated on the date under review.

*Prairie Provinces.*—Employment in the Prairie Provinces has with few exceptions declined on February 1 in the thirteen years for which records are available. The tendency was also unfavourable on the date under review, when the 1,254 co-operating employers reduced their staffs by 2,207 persons to 105,850 on February 1. Manufacturing, particularly

Feb. 1.....	91.4	101.3	88.5	95.3	84.7	84.1
Relative Weight of Employment by Economic Areas as at Feb. 1, 1934.....	100.0	8.4	28.4	42.5	12.5	8.2

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada by the firms making returns for the date under review.

iron and steel, logging and highway construction showed heightened activity, but mining, communications, transportation, services and trade reported contractions, those in retail establishments and coal mines being greatest. Much larger losses had been indicated on February 1, 1933, when the index, at 80.4, was 4.3 points lower than at the date under review.

*British Columbia.*—There was a considerable increase in employment on February 1; this took place mainly in manufacturing (notably in lumber, iron and steel and non-ferrous metal works), but logging and mining also showed improvement. On the other hand, transportation, construction and services were slacker. The working forces of the 835 reporting firms aggregated 69,216, a gain of 3,086 persons as compared with their staffs in the preceding month. A reduction had been indicated on February 1, 1933, and the index, at 68.0, was then many points lower than at the beginning of February in the present year, when it was 84.1.

Index numbers of employment by economic areas are given in Table I.

### Employment by Cities

The trend of employment was downward in Toronto and Winnipeg, while in Montreal, Quebec City, Ottawa, Hamilton, Windsor and

the adjacent Border Cities and Vancouver the tendency was distinctly favourable.

*Montreal.*—Manufactures showed considerable recovery, especially in the footwear, textile and iron and steel groups, while transportation and road maintenance were also decidedly busier; on the other hand, tobacco and beverage factories and retail trade reported curtailment, that in the latter being seasonal in character. Data were received from 1,166 firms employing 119,550 workers, or 4,512 more than on January 1. This was the largest February 1 increase recorded in the years since 1923. A loss had been indicated on February 1, 1933, when the index, at 76.1, was five points lower.

*Quebec.*—Returns tabulated from 155 employers in Quebec City showed that they had enlarged their staffs from 11,154 on January 1 to 11,534 persons at the beginning of February, the index rising from 86.5 on the former to 89.6 on the date under review. Manufacturing afforded more employment, mainly in leather-using plants, and transportation was also busier. Trade, on the other hand, was seasonally dull. The index was fractionally higher than on the corresponding date of last year; employment had then declined from the preceding month.

*Toronto.*—Heavy seasonal losses took place in retail trade, but manufacturing, construc-

Feb. 1.....	81.1	89.6	89.7	98.4	80.7	90.9	79.5	83.9
Relative Weight of Employment by Cities as at Feb. 1, 1934.....	14.1	1.4	12.7	1.5	3.0	1.4	4.0	3.1

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated city to the total number of all employees reported in Canada by the firms making returns for the date under review.

tion and services reported improvement; the largest gains in manufacturing were in metal, textile, vegetable food and lumber plants. On the whole there was a decrease of 437 in the number employed by the 1,251 co-operating firms, who had 107,852 employees. This decline was decidedly smaller than that indicated on February 1 of a year ago, when the level of employment was lower than on the date under review.

*Ottawa.*—There were seasonal declines in retail trade, but manufacturing, transportation and construction were more active; the gains in the last-named were largely due to snow-clearing operations. One hundred and sixty-seven employers in Ottawa had 12,559 workers, or 391 more than on January 1. Employment was in greater volume than at the beginning of February, 1933, when a reduction had been noted.

*Hamilton.*—Employment in Hamilton showed an important increase, mainly in the

manufacturing group, in which large gains were shown by textile and iron and steel plants. There were, however, losses of a seasonal character in construction and trade. Statistics were tabulated from 253 firms employing 25,452 persons, compared with 24,294 in the preceding month. The index, at 80.7, was over ten points higher than on February 1 of a year ago; a smaller advance had then occurred.

*Windsor and the adjacent Border Cities.*—Considerable recovery was indicated in automobile factories, but there were slight declines in retail trade and other industries in the Border Cities. The 147 co-operating firms reported 11,951 workers, as against 10,030 on January 1. The situation was better than at the same date in 1933, when the trend had also been upward, although the advance was on a smaller scale; the index then stood at 76.2, compared with 90.9 at the beginning of February in the present year.

Relative Weight of Employment by Industries as at Jan. 1, 1934.....	100.0	49.5	5.7	5.9	2.4	10.6	13.5	2.6	9.8

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada by the firms making returns for the date under review.

**Winnipeg.**—The number employed in Winnipeg showed a contraction, mainly in retail trade, while manufacturing reported considerable improvement, and there were minor gains in transportation, construction and services. Returns were compiled from 412 firms with 33,501 employees, compared with 34,172 in the preceding month. Employment was rather more active than on February 1 last year, the curtailment then indicated having been greater.

**Vancouver.**—Manufacturing reported heightened employment, particularly in the lumber, food and metal groups, but transportation and construction were slacker. The 360 reporting firms employed 26,192 persons, as against 25,634 on January 1. The index was nearly three points higher than at the same date in 1933, when losses had been reported.

Index numbers of employment by cities are given in Table II.

## Manufacturing

A considerable revival in factory employment took place on February 1, 1934, when the 5,093 manufacturers who furnished statements reported 419,122 operatives, compared with 398,247 in the preceding month. This was an increase of 20,875 or 5.2 per cent since January 1. Reflecting this gain, the index rose from 80.0 at the former date to 84.2 at the beginning of February, an increase that exceeded the average. Last month's survey of employment pointed out that the experience of the manufacturing industries in the thirteen years for which statistics are available has shown on February 1 an average recovery from the regular January losses equalling slightly more than 52 per cent of such declines; while the reductions on January 1, 1934, were considerably less than the average recorded in the years since 1920, the recovery noted on the date under review was

TABLE IV. INDEX NUMBERS OF EMPLOYMENT IN MANUFACTURING (AVERAGE, 1926=100)

Industries	Relative Weight	Feb. 1, 1934	Jan. 1, 1934	Feb. 1, 1933	Feb. 1, 1932	Feb. 1, 1931	Feb. 1, 1930	Feb. 1, 1929

The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

substantially greater, amounting to over 95 per cent of the decrease in the preceding month. This is the highest proportion of recovery on record in the years since 1920. The next largest proportionate increase between January 1 and February 1 was in 1929, when 25,564 persons were reinstated on the latter date, out of the 27,624 laid off at the first of the year, being a percentage of 92.5.

Very much smaller gains had been reported on February 1, 1933, when the indicated recovery had represented the re-absorption of only slightly more than 10 per cent of those laid off on January 1; the index then stood at 75.0, or over nine points lower than at the beginning of February in the present year. Employment, however, continues in smaller volume than at midwinter of most other years since 1920, the index being lower than on February 1 in any other of these years except 1933 and 1922.

The greatest improvement on the date under review as compared with the preceding month occurred in iron and steel plants, in which over 9,600 additional persons were reported by the firms furnishing data, this gain being larger than on February 1 in any other year since 1930. There were also important increases in textiles (amounting to over 4,100 operatives) and in leather, lumber, non-ferrous metal, vegetable food, pulp and paper and other industries. On the other hand, tobacco, musical instrument and electric currents plants were slacker.

The record for past years shows on March 1 a continuance of the upward movement indicated at the beginning of February.

*Animal Products—Edible.*—There was a minor increase in employment in this group at the beginning of February, comparing favourably with the reduction noted on the corresponding date last year, when the index at 88.1, was over seven points lower. Statements were tabulated from 230 firms employing 17,461 workers, as compared with 17,392 in the preceding month. Dairies reported losses, but fish-canning and preserving plants enlarged their personnel.

*Leather and Products.*—Employment in boot and shoe factories considerably increased, while other branches of the leather industry experienced only slight general changes. A combined working force of 18,101 persons was reported by the 261 co-operating manufacturers, who had 16,050 employees at the beginning of January. Most of the advance took place in Quebec and Ontario. Activity was greater than on February 1, of a year ago.

*Lumber and Products.*—Expansion was indicated in sawmills and in furniture, wood-

turning and carving and other lumber-using factories; 2,214 workers were taken on by the 780 firms making returns, who had 29,753 on their staffs. This increase was over five times as large as that registered at the beginning of February, 1933, when employment was in smaller volume. The gains in Ontario and British Columbia were most extensive.

*Plant Products—Edible.*—There was important improvement in the vegetable food group, according to the 396 reporting establishments, which employed 25,262 workers, compared with 24,281 in the preceding month. Canneries showed seasonal losses, while bread and bakery, flour and cereal and other plant food factories showed an increase in the number of their employees. A smaller gain had been reported on February 1 last year; the index then stood at 89.8, as compared with 89.1 on the date under review.

*Pulp and Paper.*—Pulp and paper mills were decidedly busier, and paper product factories reported moderate gains. The general index was nearly four points higher than on February 1, 1933, when additions to staffs on a smaller scale had been recorded. Data were received from 561 employers of 52,456 workers, as against 51,477 at the beginning of January, 1934; most of the improvement took place in the Maritime Provinces and Quebec.

*Rubber Products.*—The trend of employment in rubber factories was upward, 48 of these enlarging their payrolls from 10,798 persons on January 1 to 11,042 on February 1. The index, at 86.6 was over fourteen points higher than on the same date in 1933, when curtailment had been indicated.

*Textile Products.*—The advance in employment in the co-operating factories greatly exceeded that noted on February 1, 1933, when activity was at a distinctly lower level than at the date under review. Cotton, silk, woolen, headwear, garment and personal furnishing and knitting establishments registered important increases in personnel; the working force of the 870 co-operating firms aggregated 86,532 persons on February 1, 1934, as compared with 82,390 in their last report. Ontario and Quebec showed especially marked improvement.

*Tobacco, Distilled and Malt Liquors.*—There was a reduction in employment in this division, occurring mainly in tobacco works. Returns for the beginning of February were tabulated from 159 manufacturers with 15,428 employees, or 832 fewer than in their last report. Employment was brisker than on February 1 a year ago, when the same number of workers had been laid off.

*Chemicals and Allied Products.*—Statements were compiled from 167 firms in this group, whose staffs aggregated 8,465 as compared with 8,397 at the beginning of January. Employment was more active than in the winter of 1933.

*Clay, Glass and Stone Products.*—An upward movement was recorded in this group on the date under review, according to 183 manufacturers, whose labour forces included 6,058 workers, or 212 more than in the preceding month. Employment was better than on February 1, 1933; little general change had then been indicated.

*Electric Current.*—Curtailment was noted in electric current plants at the beginning of February; the 94 co-operating manufacturers reported 12,996 employees, compared with 13,156 at January 1. Activity was less than on February 1 last year, when rather greater declines had taken place.

*Electrical Appliances.*—Employment in electrical appliance works showed an advance, while the index was over seven points higher than on the same date a year ago; the tendency had then been unfavourable. Data were received from 103 establishments employing 10,758 operatives, as against 10,550 on January 1, 1934.

*Iron and Steel Products.*—There were particularly important increases in employment in iron and steel factories, where the gains were larger than on February 1 in any other year since 1930. The recovery was most noteworthy in automobile and other vehicle and crude, rolled and forged works, while the agricultural implement, machinery, heating appliance, wire, small hardware, tools, foundry and machine shop and some other groups were also busier. The improvement in Ontario was most pronounced, but the trend was generally upward. Statistics were tabulated from 794 firms, whose staffs stood at 89,436, compared with 79,794 on January 1. The index, at 68.2, was ten points higher than on the corresponding date last year, when very much smaller advances had been indicated.

*Non-ferrous Metal Products.*—Smelting and refining, lead, tin, zinc, copper and other works recorded heightened activity. The gain in the group as a whole was decidedly greater than on February 1, 1933, when the index was many points lower. The working force of the 145 co-operating manufacturers included 15,343 employees, or 1,078 more than at the beginning of January. The increase took place largely in Ontario and British Columbia.

*Mineral Products.*—One hundred and fifteen establishments in the mineral products group reported 12,748 workers, as compared with 12,771 in the preceding month. Employment on the whole was decidedly brisker than at mid-winter in 1933, when a moderate gain had been indicated.

### Logging

Further large increases were recorded in logging, in which employment was very substantially greater than on February 1 of 1933; the index was, indeed, higher than in any other month since March 1, 1930. Statements were received from 285 operators employing 47,867 workers, as against 46,735 on January 1. The trend of employment was downward in the Maritime Provinces and Quebec, but elsewhere the movement was favourable.

### Mining

Coal and metallic ore mining showed heightened employment, while quarries and other non-metallic mineral mines were slacker. On the whole, there was an increase of 1,274 persons in the forces of the operators furnishing returns, who numbered 253. Their staffs aggregated 49,952 employees, of whom 26,141 were engaged in the mining of coal, 19,005 in metallic ores and 4,806 in non-metallic minerals, other than coal. A loss had been indicated in the group as a whole on February 1, 1933, when the index was many points lower than on the date under review.

### Communications

The working force of the companies and branches reporting stood at 20,222 persons, compared with 20,617 in the preceding month, most of the reduction taking place on telephones. The number employed was not so great as on the same date in 1933, when declines were also recorded.

### Transportation

*Street Railways and Cartage.*—There was a downward trend in employment in this division on February 1; the losses were smaller than on the same date in 1933, but the index then was higher. The 192 co-operating employers had 23,806 persons on their payrolls, or 113 fewer than in the preceding month. There were small losses in all economic areas except Quebec.

*Steam Railways.*—Moderate improvement was noted at the beginning of February, when 104 persons were added to the operating staffs of the steam railways, mainly in the Maritime Provinces and Quebec. Returns were

compiled from 100 companies and branches in this group, whose staffs aggregated 55,647 persons, as compared with 55,543 on January 1. Large reductions had been noted on February 1 of last year, when the index stood at 68.5, as compared with 69.9 at the date under review.

*Shipping and Stevedoring.*—Employment in water transportation showed a small falling-off; 91 employers released 130 workers from their payrolls, bringing them to 10,307 on February 1 of the present year. The index was rather higher than on the same date in 1933; the losses then recorded had been very substantially larger.

### Construction and Maintenance

*Building.*—Employment in building construction advanced slightly on February 1; the index was higher than at the beginning of February a year ago, when losses had been recorded. Statistics were received from 643 contractors, with 13,950 persons in their employ on the date under review, as against 13,755 on January 1, 1934. There were fairly large gains in Ontario, and minor increases in Quebec, but elsewhere the tendency was unfavourable.

*Highway.*—The number of persons reported by 320 employers in the highway construction and maintenance group was 73,284, or 7,926 more than in the preceding month. While activity advanced in all five economic areas, the increases in Ontario were especially pronounced. Part of the improvement was caused by snow-cleaning operations following the severe storms, but there were also increases in the numbers at the unemployment relief camps.

*Railway.*—Considerable additions to staffs were noted in railway construction and maintenance, due to track-clearance after the

heavy snowfalls. A decline had been recorded on the same date in 1933, when the index was many points lower. Statements were tabulated from 34 employers in this group, with 26,960 persons on their payrolls, as compared with 23,724 in the last report. Increases in personnel were registered in all provinces except British Columbia, the greatest gain being in Quebec.

### Services

Employment in services was not so active as in the preceding month; 395 establishments had 22,450 employees, or 224 fewer than on January 1. The index was higher than on February 1 of last year, when a general increase had been noted in this group.

### Trade

Following the heightened activity resulting from the Christmas and holiday season, there was a considerable falling-off in the number employed in trade on February 1. The losses, like the gains in the preceding month, were on a larger scale than those noted on the same date in 1933, and other years of the record. The index of employment was slightly higher than on Feb. 1 of last year. The 975 trading establishments furnishing data reduced their payrolls from 91,311 employees on January 1, 1934, to 83,376 at the beginning of February. There were general decreases in retail stores, but wholesale establishments were busier.

### Tables

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area, or industry, is of the total number of employees reported in Canada by the firms making returns on February 1, 1934.

## (2) Unemployment in Trade Unions at the Close of January, 1934

The term unemployment as used in the following article refers to involuntary idleness due to economic causes. Persons who are occupied at work other than their own trades or who are idle due to illness are not considered as unemployed while unions which are involved in industrial disputes are excluded from these tabulations. As the number of unions reporting varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The volume of activity afforded local trade union members at the close of January, 1934, showed but slight change from the previous month, although the tendency was toward lessened employment. This was apparent from the returns tabulated from 1,728 labour organizations at the close of January, comprising a membership of 149,630 persons, 31,695 of whom were without work at the end of the month, a percentage of 21.2 contrasted with 21.0 per cent in December. The situation in British Columbia was a deciding factor in this less favourable movement noted from December, and was due almost entirely to quietness in

the navigation division. In Manitoba, Saskatchewan and Quebec also, there were contractions of activity of minor importance. On the other hand, the employment advances reflected by Nova Scotia, New Brunswick, Alberta, and Ontario unions were slight. Employment generally was on a higher level than in January, 1933, when 25.5 per cent of the members reported were idle. British Columbia unions registered a moderate drop in activity during the month reviewed caused, as in the previous comparison, by curtailment in navigation, while in the remaining provinces a better situation prevailed. Nova Scotia unions showed

John the trend was upward, though the change was quite small. On the contrary, there was some slight lessening of the employment volume available to Halifax, Montreal, Toronto, Winnipeg, Regina and Vancouver members. In all cities used for comparison more active conditions prevailed than in January, 1933, Edmonton and Saint John unions especially showing marked improvement. In Vancouver also, the gains recorded were noteworthy, Regina, Toronto and Montreal reporting more moderate advances, while in Winnipeg and Halifax the tendency was but slightly upward.

### PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADE UNIONS

pronounced employment expansion from January a year ago, which was, for the most part, centred in the manufacturing industries, particularly the iron and steel trades. In New Brunswick and Alberta also, noteworthy gains in employment occurred which were of rather general distribution throughout these provinces, and conditions for Saskatchewan, Ontario, Quebec, and Manitoba unions improved moderately.

Each month a tabulation is made separately of unemployment in the largest city in each province with the exception of Prince Edward Island. Of these, Edmonton unions during January reported a substantially better situation than in the preceding month, and in Saint

The chart which appears with this article traces the course of unemployment by months from January, 1928, to date. There was little change in the level of the curve during January from the previous month though the tendency was toward an unemployment rise. However, the point reached by the curve at the close of the month was below that of January, 1933, showing a considerably improved situation during the month reviewed.

In the manufacturing industries a better volume of work was available during January than in either the previous month or January, 1933, the gains in the latter comparison being substantial. This was noted by the returns received from a total of 468 organizations with

a membership aggregate of 42,455 persons, 9,301 or 21.9 per cent of whom were without work at the end of the month, contrasted with percentages of 23.4 in December and 29.6 in January a year ago. Employment increases involving the greatest number of members were recorded by leather workers, while cigarmakers, textile, and hat and cap workers registered noteworthy percentage gains though including few members. Moderate improvement in conditions was reflected by papermakers, garment workers and general labourers, and the trend of activity for brewery workers, printing tradesmen, and iron and steel workers was slightly better. Metal polishers,

wood, fur, and glass workers, on the contrary, were much slacker than in December, but as their combined membership was small they did not affect the situation in manufacturing, as a whole, to any great extent. Among bakers and confectioners, and jewellery workers fractional curtailment only was shown from December. Pronounced recovery from January a year ago was indicated in the iron and steel trades, and was a noteworthy factor in the better situation obtaining in the manufacturing industries. Improvement in large measure was also apparent among garment, wood and textile workers, and cigarmakers, and important employment advances occurred for papermakers. Heightened activity, though of considerably lesser degree, was indicated by printing tradesmen, bakers and confectioners, and brewery workers. Much quieter conditions than in January last year, however, prevailed for general labourers, hat, cap, leather and glass workers, and the declines in activity recorded by jewellery and fur workers were noteworthy.

Reports were tabulated at the close of January from 52 unions of coal miners, with 14,740 members, 1,146 or 7.8 per cent of whom were without work at the end of the month in contrast with 6.8 per cent in December and with 8.6 per cent in January, 1933. In the Nova Scotia mines the change recorded from December was very slight, though favourable, while in Alberta there was a 3 per cent drop in activity, and in British Columbia a fractional decline only. Both in the Alberta and British Columbia coal mines a better volume of work was afforded than in January a year ago, though in Nova Scotia activity was somewhat retarded. A number of miners, however, continued to work but a few days a week.

The situation in the building and construction trades as a whole changed but slightly during January from both the previous month and January, 1933, according to the returns compiled from 204 associations covering a membership of 16,455 persons. Of these, 11,386 or 69.2 per cent were unemployed at the end of the month, compared with 69.1 per cent in December and 69.4 per cent in January, 1933. Fluctuations, however, were apparent in various trades. Bridge and structural iron workers, granite and stonecutters, electrical workers, and plumbers and steamfitters all reported a somewhat higher level of activity than in December. Among steam shovelmen the same percentage of idleness was reported in both months compared, while of the contractions in employment among the remaining tradesmen the most appreciable was noted by painters, decorators and paper-

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

hangers. Among carpenters and joiners, and bricklayers, masons and plasterers, who together form a substantial share of the total membership in the building trades, activity was retarded by less than 1 per cent. Plumbers and steamfitters, and steam shovelmen were the only tradesmen to report a lowering of the employment volume from January, 1933, the change being rather slight. On the other hand, activity for granite and stonecutters showed marked improvement, and among tile layers, lathers and roofers, and hod carriers and building labourers the employment advances were noteworthy. Bridge and structural iron workers registered moderate increases in work available from January of last year, and slight gains only occurred for electrical workers, painters, decorators and paperhangers, bricklayers, masons and plasterers, and carpenters and joiners.

Employment in the transportation industries during January remained in much the same volume as in December, with a slight tendency towards lessened activity, as shown by the reports tabulated from 764 associations with 55,298 members. Of these, 7,646 or 13·8 per cent were idle on the last day of the month contrasted with 13·4 per cent of unemployment in December. Steam railway employees, whose returns constituted about 78 per cent of the entire group membership reported, were slightly better engaged than in December, and among teamsters and chauffeurs all members were registered at work, compared with a fractional percentage of unemployment in the previous month. Navigation workers, however, showed a large falling off in activity from December, particularly in British Columbia, while among street and electric railway employees the same situation obtained in both months under review. Conditions in the transportation industries were more favourable than in January a year ago when 15·6 per cent of the members reported were idle, steam railway employees showing a substantial rise in available work, which was in part offset by marked slackness in navigation. Among street and electric railway employees, and teamsters and chauffeurs nominal gains in activity only were recorded.

Retail clerks were all busily engaged during January as in the two previous months, while in January a year ago unemployment stood at 5·5. For the month under review reports were tabulated from 3 associations of these

workers, with a membership total of 1,006 persons.

From unions of civic employees 75 reports were received at the end of January, including 7,050 members, 149 of whom were idle on the last day of the month, a percentage of 2·1 compared with percentages of 2·8 in December and 9·0 in January, 1933.

The miscellaneous group of trades reported minor improvement in conditions during January from the preceding month, the 115 organizations reporting with an aggregate of 4,087 members showing that 759 or 18·6 per cent were without work on the last day of the month contrasted with 19·8 per cent in December. In January, 1933, unemployment had also stood at 18·6 per cent. Theatre and stage employees were afforded a considerably better volume of work than in December, as were stationary engineers and firemen. On the contrary, hotel and restaurant employees, and unclassified workers showed noteworthy declines in activity, and barbers fractional recessions only. An upward employment tendency was noted by theatre and stage employees, stationary engineers and firemen, and barbers from January, 1933, which was offset by the curtailment evident among hotel and restaurant employees, and unclassified workers.

Slightly less activity was reflected by fishermen during January from the preceding month, the 2 unions from which reports were received with 705 members showing that 190 or 27·0 per cent were unemployed on the last day of the month contrasted with 25 per cent in December. Employment was at a considerably lower level than in January, 1933, when 13·7 per cent of the members reported were without work.

Returns were received from 4 unions of lumber workers and loggers during January, embracing a membership of 661 persons, 144 or 21·8 per cent of whom were idle at the end of the month contrasted with 19·0 per cent in December and with 22·9 per cent in January, 1933.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1933 inclusive, and also the percentage of unemployment by provinces for January of each year from 1919 to 1931 inclusive, and for each month from January, 1932, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

### (3) Employment Office Reports for January, 1934

The volume of business transacted by the offices of the Employment Service of Canada during the month of January, 1934, as indicated by the average daily placements effected, showed a decline of nearly 8 per cent from

the preceding month, but a gain of over 27 per cent when a comparison was made with the records of January a year ago. All groups, except logging, manufacturing, and services, showed losses in the first comparison, the

largest decrease being in construction and maintenance. This group was also largely responsible for the marked increase over January, 1933, although all other industries, except farming and trade, likewise recorded more placements effected than in January last year. A substantial gain reported in logging was almost entirely counteracted by a correspondingly heavy loss in farming.

The accompanying chart shows the trend of employment since January, 1932, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations be-

each 100 applications during the periods under review were 47.6 and 53.2, as compared with 45.3 and 50.3 during the corresponding month of 1933.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during January, 1934, was 1,456 as compared with 1,588 during the preceding month, and with 1,145 in January last year.

The average number of applications for employment received daily by the offices during the month under review was 2,633 as compared with 2,488 in December and with 2,275 during January, 1933.

#### POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o-o-o-o-o-o

ing made semi-monthly. It will be seen from the graph that the curve of vacancies and of placements in relation to applications showed a sharp downward trend during the first half of January, but during the latter half of the month under review made a marked recovery to nearly the same level shown at the close of December, 1933, thereby attaining a position about 8 points above the levels registered at the end of January a year ago. The ratio of vacancies to each 100 applications was 50.3 and 60.3 during the first and the second half of January, 1934, in comparison with ratios of 48.1 and 52.2 during the same periods of 1933. The ratios of placements to

The average number of placements made daily by the offices of the Service during January, 1934, was 1,393, of which 665 were in regular employment and 728 in work of one week's duration or less, as compared with a total daily average of 1,513 during the preceding month. Placements in January a year ago averaged 1,093 daily, consisting of 499 in regular and 594 in casual employment.

During the month of January, 1934, the offices of the Service referred 37,991 persons to vacancies and effected a total of 36,215 placements. Of these, the placements in regular employment were 17,292, of which 13,486 were of men and 3,806 of women, while place-

ments in casual work totalled 18,923. The number of vacancies reported by employers was 30,734 for men and 7,122 for women, a total of 37,856, while applications for work numbered 68,442, of which 54,824 were from men and 13,618 from women. Reports for December, 1933, showed 39,683 positions available, 62,193 applications made and 37,807 placements effected, while in January, 1933, there were recorded 28,602 vacancies, 56,873 applications for work, and 27,304 placements in regular and casual employment.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1924, to date:—

Year	Placements		
	Regular	Casual	Totals
1924.....	247,425	118,707	366,132
1925.....	306,804	106,021	412,825
1926.....	300,226	109,929	410,155
1927.....	302,723	112,046	414,769
1928.....	334,604	135,724	470,328
1929.....	260,747	137,620	398,367
1930.....	187,872	180,807	368,679
1931.....	175,632	295,876	471,508
1932.....	153,771	198,443	352,214
1933.....	170,576	181,521	352,097
1934 (1 month).....	17,292	18,923	36,215

#### NOVA SCOTIA

There was a gain of 10 per cent in the number of positions offered through employment offices in Nova Scotia during January when compared with the preceding month, but a decline of over 72 per cent in comparison with the corresponding month of last year. Similar percentages of change were recorded in placements under both comparisons. The decline in placements from January, 1933, was entirely due to fewer men being given relief work on road construction, as all other industrial divisions showed gains. None, however, were important. The largest increases were in logging and services. Placements by industrial divisions included manufacturing, 17; logging, 71; construction and maintenance, 829; trade, 23; and services, 285, of which 230 were of household workers. Placements in regular employment numbered 202 of men and 76 of women.

#### NEW BRUNSWICK

The demand for workers, as indicated by orders received at employment offices in New Brunswick during January, was over 14 per cent higher than in the preceding month, but over 22 per cent less than during the corresponding month of last year. Similar percentages of change were also reported in

placements under both comparisons. As in Nova Scotia, improvement was reported in all industrial divisions, except construction and maintenance, the decline in this group being due to fewer workers being provided with relief employment on road construction and accounted for the decrease in placements from January of last year for the province as a whole. The only gain of importance was in services. Industrial divisions in which most of the placements were effected during the month were manufacturing, 17; construction and maintenance, 649; and services, 522, of which 342 were of household workers. During the month 44 men and 59 women were placed in regular employment.

#### QUEBEC

During January, employment offices in the province of Quebec received orders for over 22 per cent more workers than in the preceding month and over 61 per cent more than during the corresponding month last year. There was a gain of 36 per cent in placements when compared with December, and of 77 per cent in comparison with January, 1933. All industrial divisions participated in the gain in placements over January of last year, the largest increases being in services, logging, construction and maintenance, and manufacturing. Placements by industrial divisions included manufacturing, 131; logging, 454; construction and maintenance, 230; trade, 101; and services, 1,680, of which 1,508 were of household workers. During the month 937 men and 1,366 women were placed in regular employment.

#### ONTARIO

Orders received at Ontario employment offices during January called for over 14 per cent less workers than in the preceding month, but over 113 per cent more than during the corresponding month last year. There was a decline of over 15 per cent in placements when compared with December, but a gain of over 113 per cent in comparison with January, 1933. The large increase in placements over January last year was due to relief work on road grading and snow removal, as the gains in groups other than construction and maintenance were not sufficient to completely offset declines in services and trade. Industrial divisions in which most of the placements were effected during the month were manufacturing, 442; logging, 902; farming, 320; construction and maintenance, 13,449; trade, 254; and services, 2,686, of which 1,580 were of household workers. There were 4,576 men and 1,142 women placed in regular employment during the month.

\* 1,497 Placements effected by offices since closed.

## MANITOBA

Opportunities for employment, as indicated by orders received at employment offices in Manitoba during January, were nearly 3 per cent less than in the preceding month, but nearly 12 per cent above the corresponding month of last year. There was a decline of less than 1 per cent in placements when compared with December, but a gain of over 22 per cent in comparison with January, 1933. Logging, construction and maintenance, and farming showed the largest increases in placements over January of last year and accounted for the gain under this comparison. Services showed the only loss of importance. Placements by industrial divisions included logging, 489; farming, 1,253; construction and maintenance, 1,108; and services, 615, of which 528 were of household workers. Placements in regular employment numbered 2,703 of men and 388 of women.

## SASKATCHEWAN

There was a decline of over 12 per cent in the number of positions offered through employment offices in Saskatchewan during January when compared with the preceding month and of nearly 36 per cent in comparison with the corresponding month of last year. Placements were nearly 7 per cent less than in December and over 36 per cent below January, 1933. The decline in placements from January last year was due to a substantial reduction in farm placements. Losses were, however, also reported in services and construction and maintenance, but were offset by gains in logging, mining, and transportation. Industrial divisions in which most of the placements were effected during the month were manufacturing, 56; logging, 94; farming, 741; construction and maintenance, 758; and services, 662, of which 488 were of household workers. During the month 1,331 men and 395 women were placed in regular employment.

## ALBERTA

Employment opportunities, as indicated by orders received at employment offices in Alberta during January, were over 48 per cent better than in the preceding month and 84 per cent above the corresponding month last year. There was a gain also in placements of nearly 44 per cent when compared with December and of over 78 per cent in comparison with January, 1933. All industrial divisions participated in the increase in placements over January last year, the largest gains being in construction and maintenance, logging, and farming. Placements by industrial divisions

included manufacturing, 56; logging, 263; farming, 618; mining, 62; construction and maintenance, 1,747; and services, 354, of which 283 were of household workers. There were 2,147 men and 211 women placed in regular employment during the month.

## BRITISH COLUMBIA

During January, positions offered through employment offices in British Columbia were 2 per cent less than in the preceding month, but over 39 per cent above the corresponding month of last year. There was a decline of less than 1 per cent in placements when compared with December, but a gain of 39 per cent in comparison with January, 1933. A gain in placements over January last year was almost entirely due to work provided in relief of unemployment on road construction and maintenance, as none of the increases, which were reported in nearly all other industrial groups, were large. Industrial divisions in which most of the placements were effected during the month were logging, 24; farming, 31; construction and maintenance, 3,163; and services, 594, of which 379 were of household workers. Placements in regular employment numbered 1,546 of men and 169 of women.

## Movement of Labour

During the month of January, 1934, the Offices of the Employment Service of Canada made 17,292 placements in regular employment, 7,355 of which were of persons for whom the employment found was outside the immediate vicinity of the offices at which they were registered. Of the latter, 1,220 were granted the Employment Service reduced transportation rate, 813 going to centres within the same province as the despatching office and 407 to other provinces. The reduced transportation rate, which is 2.7 cents per mile with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Quebec offices issued 258 certificates for reduced transportation during January, all to bushmen. Of these, 96 journeyed from Quebec city to employment within the same zone, while from Hull 162 were despatched to points in the Sudbury zone. Transfers at the reduced rate from Ontario centres during January were 515 in number, 514 of which were to points within the province. Included among these were 491 bushworkers, 224 going to the Timmins zone, 139 to Port Arthur, 53 to Port William and 75 to Sudbury, a number of offices assisting in the transfer of these workers.

In addition, the Fort William zone received 5 mine workers from Timmins and 1 agent from Fort William. Journeying from Port Arthur to points within its own zone were 4 fishermen, 2 mine workers, 4 cookees, 1 waitress and 1 housekeeper. From Timmins 1 mine solution man proceeded to Sault Ste. Marie, and 1 carpenter within the Timmins zone. Securing a certificate at Sudbury 1 miner was carried to a point within the same zone. The 2 remaining transfers were of a labourer journeying from Toronto to North Bay, and of a farm hand going from Brantford to Timmins. The one worker who travelled outside the province was a mine cook sent to Amos by the Timmins office. In Manitoba, 289 workers took advantage of the Employment Service reduced transportation rate during January, 47 going to employment within the province and 242 to other provinces. All of these secured their certificates for transportation at the Winnipeg office. The Winnipeg zone was the destination of all persons travelling to provincial employment, including 40 bushmen, 6 tractor drivers, and 1 blacksmith. The movement outside the province was mainly to the Port Arthur zone, which received 237 bushworkers, 1 timekeeper, 1 cook, and 1 housemaid. In addition, from Winnipeg 1 miner was carried at the special rate to Prince Albert, and 1 hotel cook to Regina. From the offices in Saskatchewan 42 persons secured certificates for reduced transportation during January, all of these proceeding to provincial

centres. For employment within their respective zones Prince Albert transferred 33 bushmen and Moose Jaw 1 farm hand. The Regina office was instrumental in the despatch of 1 teacher each to the Prince Albert and Moose Jaw zones, and of 4 teachers within its own zone. To the Prince Albert zone also were destined 2 bushmen travelling from Saskatoon. Business transacted by Alberta offices during January involved the issue of 99 reduced rate certificates, 97 provincial and 2 interprovincial. The latter were granted to farm hands bound from Edmonton to the North Battleford zone. Transfers within the province were also from Edmonton, 1 farm hand going to Drumheller, and 86 bushworkers, 3 farmhands, 2 domestics, 3 mine workers, 1 teamster, and 1 maid to various points within the Edmonton zone. The movement of labour from British Columbia centres during January was entirely to provincial situations and comprised the transfer of 17 persons. From Vancouver 3 miners journeyed to Kamloops and 6 mine workers, 2 cooks, 1 truck driver, and 1 labourer within the Vancouver zone. In addition, from Nelson 4 loggers were sent to Penticton.

Of the 1,220 workers who travelled at the Employment Service reduced rate during January, 685 were conveyed by the Canadian National Railways, 499 by the Canadian Pacific Railway, 26 by the Temiskaming and Northern Ontario Railway, and 10 by the Pacific Great Eastern Railway.

#### (4) Building Permits Issued in Canada in January, 1934

There was a seasonal decline in the value of the building permits issued by 61 cities during January as compared with the preceding month, and the total was also lower than in January, 1933; the co-operating municipalities reported permits for buildings estimated to cost \$693,962, compared with \$1,983,292<sup>1</sup> in December, 1933, and \$1,185,961<sup>1</sup> in January of last year. There was, therefore, a reduction of 65 per cent in the first and of 41·5 per cent in the second comparison.

Some 50 cities furnished detailed statements, showing that they had granted some 40 permits for dwellings valued at about \$136,000, and about 460 permits for other buildings estimated to cost approximately \$480,000. In December, authority was granted for the erection of some 60 dwellings and 400 other buildings, estimated to cost approximately \$305,000 and \$1,500,000, respectively.

Nova Scotia, Alberta and British Columbia reported increases in the value of the building

authorized during January as compared with December, 1933, the gain of \$26,628 or 61 per cent in British Columbia being most noteworthy. Of the declines elsewhere recorded, that of \$747,635 or 89·2 per cent in Quebec was greatest.

As compared with January, 1933, New Brunswick and Ontario showed increases of 22·7 per cent and 29·4 per cent respectively. Reductions were reported in the remaining provinces, that of \$243,476 or 98·5 per cent in Saskatchewan being most pronounced.

In Montreal and Winnipeg there were decreases in the value of the building permits granted as compared with either the preceding month or the same month of last year; in Toronto there was a decline in the former but an increase in the latter comparison, while in Vancouver the January total was higher than in December, but lower than in January, 1933. The following cities reported increases in both comparisons: Moncton, Saint John, Three Rivers, Chatham, Fort William, Galt, Kings-

<sup>1</sup> Revised figure.

ton, Kitchener, Ottawa, Peterborough, Port Arthur, St. Catharines, St. Boniface, Edmonton, Medicine Hat, Kamloops, Prince Rupert, and North Vancouver.

*Record for January in the Years 1920-1934.*

—The following table gives the value of the building authorized by 61 cities during January of each year since 1920. Index numbers of wholesale prices of building materials in January of the same years are also given (1926=100).

The 1934 figure for January was smaller than in any other year of this record, but it should also be noted that wholesale costs of building materials were lower in January than in the winter of most other years since 1920.

Year	Value of permits issued in January	Indexes of value of permits issued in January (1926=100)	Indexes of wholesale prices of building materials in January (1926 average = 100)
	\$		
1934.....	692,962	14.7	83.3
1933.....	1,185,961	25.1	75.8
1932.....	2,761,929	58.5	79.4
1931.....	8,401,456	178.0	84.0
1930.....	7,217,397	152.9	97.4
1929.....	8,416,880	178.3	98.0
1928.....	7,716,587	163.5	95.2
1927.....	5,676,537	120.3	96.8
1926.....	4,719,534	100.0	102.3
1925.....	5,447,270	115.4	101.9
1924.....	4,460,579	94.5	112.4
1923.....	4,139,498	87.7	109.8
1922.....	3,326,537	70.5	109.4
1921.....	2,595,564	55.0	143.0
1920.....	4,017,024	85.1	134.5

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

### Great Britain

THE British *Ministry of Labour Gazette*, February, 1934, summarized the employment situation as follows:—

Employment at January 22, 1934, showed a decline as compared with December 18, 1933; there was, however, a marked improvement as compared with January, 1933. A considerable part of the decline since December 18, occurred in certain industries which normally experience a seasonal set-back in January, including the distributive trades, the textile industries, the dress industries (except hat and cap manufacture), metal goods manufacture, the food and drink industries, wood-working and furniture manufacture, the paper, printing and leather industries, and hotel and boarding-house service. In addition there was some decline in the building industry, steel melting and rolling, tinplate manufacture, electrical and constructional engineering, and the transport services.

Only a small number of industries showed an improvement in employment during the month. Among these were iron and other metalliferous mining, pig iron manufacture, marine engineering, and the hat and cap industry.

Among the workpeople, numbering approximately 12,883,000, insured against unemployment in Great Britain and Northern Ireland and working in practically every industry except agriculture and private domestic service, the percentage unemployed at January 22, 1934 (including those temporarily stopped as

well as those wholly unemployed) was 18.7, as compared with 17.6 at December 18, 1933, and with 23.0 at January 23, 1933. The percentage wholly unemployed at January 22, 1934, was 15.9, as compared with 15.1 at December 18, 1933; while the percentage temporarily stopped was 2.8 as compared with 2.5. For males alone, the percentage at January, 22 1934, was 21.6, and for females, 11.0; at December 18, 1933, the corresponding percentages were 20.8 and 9.0.

At January 22, 1934, the number of persons on the Registers of Employment Exchanges in Great Britain was 1,944,026 wholly unemployed, 355,240 temporarily stopped and 89,802 normally in casual employment, making a total of 2,389,068. This was 164,989 more than a month before, but 513,997 less than a year before. The total included 1,934,828 men, 64,952 boys, 337,173 women, and 52,115 girls.

The increase over December 18, 1933, in the number of boys and girls registered as wholly unemployed was 41,822 as compared with 29,197 in the corresponding period a year ago. Such an increase due to children reaching the school-leaving age at the end of the Christmas term, is a normal feature of the January figures, and is usually quite temporary; it is larger than usual this year owing to the sharp rise in the birth rate in the latter part of 1919.

In Great Britain and Northern Ireland, the total number of persons on the Registers of Employment Exchanges at January 22, 1934, was 2,457,207.

### United States

*Manufacturing Industries.*—Index numbers showing the trend of employment and pay rolls in manufacturing industries are computed monthly by the Bureau of Labor Statistics of the U.S. Department of Labor from reports supplied by representative establishments in 89 of the principal manufacturing industries of the United States and covering the pay period ending nearest the 15th of the month. These indexes of employment and pay rolls are figures showing the percentage represented by the number of employees or weekly pay rolls in any month compared with employment and pay rolls in a selected base period. The year 1926 is the Bureau's index base year for manufacturing industries, and the average of the 12 monthly indexes of employment and pay rolls in that year is represented by 100 percent.

Employment in manufacturing industries decreased 1.1 percent in January 1934 as compared with December 1933 and pay rolls decreased 0.8 percent over the month interval. The index of factory employment in January 1934 was 69.3 compared with the index of 70.1 in the preceding month while the pay-roll index in January 1934 was 49.4 compared with 49.8 in December 1933.

A comparison of employment in January 1934 with January 1933 shows that the employment index in January of the current year is 22.4 percent above the level of the January 1933 employment index (56.6). A similar comparison of the January 1934 pay roll index with the January 1933 index (35.8) shows a gain of 38.0 percent in pay rolls over the year interval.

Decreases in employment between December and January have been reported each year since 1923 with the exception of one year, 1925, in which a slight increase was reported. Pay-roll totals have likewise decreased each year over this 10-year interval. The average change in employment in January over the 10-year period is a decrease of 1.4 percent and the average change in pay rolls over the same interval is a decrease of 4.6 percent.

The changes in employment and pay rolls in January 1934 are based on returns supplied by 17,805 establishments in 89 of the principal manufacturing industries of the United States. These establishments reported 3,077,478 workers in their employ during the pay period ending nearest January 15 with combined weekly pay rolls of \$55,610,749. The employment reports received from these co-operating establishments cover approximately 50 percent of the total wage earners in all manufacturing industries of the country.

Twenty-six of the 89 manufacturing industries surveyed reported increased employment in January 1934 compared with December 1933, and 33 industries reported increased pay-roll totals.

*Non-manufacturing industries.*—Six of the 16 non-manufacturing industries surveyed monthly by the Bureau of Labor Statistics reported increased employment in January 1934 as compared with December 1933, and 6 industries reported increased pay roll totals. The gains were not in identical industries in every instance, the power and light industry reporting a small gain in employment combined with a slight decline in earnings, and the banks, brokerage, insurance, and real estate group reporting a very small decrease in employment coupled with slightly increased pay rolls. The most pronounced gains in both employment and pay rolls over the month interval were in the anthracite mining industry. Employment in this industry increased 17.6 percent and pay rolls increased 65.2 per cent, reflecting sharply increased production over the month interval. The gain of 5 percent in employment in the hotel industry was due to the combined effect of several factors, i.e. NRA codes, repeal of national prohibition and the opening of winter resort hotels. The telephone and telegraph industry reported an increase of 1.1 percent in employment and the gains in the remaining 3 industries reporting increased employment (bituminous coal mining, power and light, and laundries) were five-tenths of one percent or less. The most pronounced declines in employment and pay rolls between December and January (19.7 percent and 14.3 percent, respectively) were shown in the retail trade group. This seasonal decline reflects to a large extent, the release from employment of those workers temporarily employed for Christmas trade. The group composed of department, variety, and general merchandise stores and mail order houses showed a decrease of 27.2 percent in employment between December and January. Retail food stores surveyed by the Bureau showed a decrease of 1.7 percent in employment over the month interval.

*Building permits.*—Reports received by the Bureau of Labor Statistics of the United States Department of Labor from 768 identical cities having a population of 10,000 or over show that there was an increase of 13.6 percent in the number of buildings but a decrease of 19.4 percent in the estimated cost of buildings for which permits were issued during January 1934 as compared with December 1933. These permit figures pertain

to building construction only and do not include other types of construction, such as road building, river and harbor work, reclamation projects, etc. The data as published by the Bureau of Labor Statistics include information concerning permits issued by local

building officials to which is added the number and cost of buildings for which contracts are awarded by Federal and State governments in cities having a population of 10,000 or over. In January the value of such public buildings was \$4,898,924.

## FAIR WAGE CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government with respect to contracts "for construction, remodelling, repair or demolition of any work" is set forth in an Act of Parliament adopted on May 30, 1930, entitled "The Fair Wages and Eight-Hour Day Act" (chapter 20-21, Geo. V). The full text of this measure appeared in the *LABOUR GAZETTE*, April 1930, page 383. The Fair Wages and Eight-Hour Day Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling repairs or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(a) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable.

(b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or, except in cases of emergency, as may be approved by the Minister.

(2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication or manufacture is carried on in any established plant or factory other than a plant or factory established for the purposes of the work contemplated.

The Fair Wages Policy was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by Order in Council of April 9, 1924. The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department

of Labour schedules setting forth the wages rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of contract.

In addition to the requirements of the Fair Wages and Eight-Hour Day Act, government contracts for the construction, remodelling, repair or demolition of any work, contain a number of other provisions for the protection of the workmen employed, which are sanctioned by the foregoing Orders in Council.

It is further provided in the foregoing Orders in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings; harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees; mail bags, letter boxes, and other postal stores; and any other articles and things hereinafter designated by the Governor in Council" must contain provisions for the observance of the current wages' rates and working hours in the district, or in the absence of any such current standards, fair and reasonable rates and working hours. These conditions, which are referred to in the Orders in Council as "B" conditions (the Conditions of the Fair Wages Orders in Council with reference to building and construction works being designated as "A" conditions), include the following Fair Wages Clause:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages

or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

Both in the case of contracts for building and construction work, and in the "B" conditions sanctioned by Orders in Council applicable to contracts for the manufacture of certain classes of supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates and working hours.

The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and address of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed claim therefor may be filed with the Minister of the Department with which the contract has been made and payment of such claim may be made by the latter.

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other

inspecting officers appointed by the Government to ensure the due observance of the contract are specially directed by the Fair Wages Orders in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of certain classes of supplies listed in the Fair Wages Orders in Council it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any disputes which may arise.

During the past month statements were received in the Department of Labour showing that the following contracts, containing fair wages conditions, have been recently executed by the Government of Canada:—

#### DEPARTMENT OF INDIAN AFFAIRS

##### *Contracts in Group "B" (Manufacture of Supplies)*

The following is a statement of contracts awarded by the Department of Indian Affairs during the month of February, 1934, for certain classes of manufactured goods, which contracts included in all cases the "B" labour conditions above referred to:—

Goods contracted for	Contractor
Blankets.....	The Horn Bros. Woollen Co., Lindsay, Ont.
Kersey cloth.....	Fairfield & Sons, Ltd., R.R. No. 1, Winnipeg, Man.
Kersey cloth.....	The Caldwell Woollen Co., Ltd., Appleton, Ont.
Kersey cloth.....	The Oxford Woollen Mills Ltd., Oxford, N.S.

#### DEPARTMENT OF NATIONAL DEFENCE

##### *Contracts in Group "B" (Manufacture of Supplies, etc.)*

The following is a statement of contracts awarded by the Department of National Defence during the month of February, 1934, for various classes of manufactured goods, which contracts included in all cases the "B" labour conditions above referred to:—

Goods contracted for	Contractor
Kitchen equipment.....	General Steel Wares Ltd., Montreal, P.Q.
Leather top lifts.....	Anglo Canadian Leather Co., Toronto, Ont.
Mackinaw coats.....	Grant-Holden-Graham Ltd., Ottawa, Ont.
Mattresses and pillows.....	Arrow Bedding Co., Ltd., Toronto, Ont.
Double tier bedsteads.....	Dominion Bedding Co., Ltd., Montreal, P.Q.
Mop cloths.....	Tarbox Bros., Ltd., Toronto, Ont.
Table oilcloth.....	Dominion Oilcloth & Linoleum Co., Ltd., Montreal, P.Q.
Cotton drawers and shirts....	Mercury Mills Ltd., Hamil- ton, Ont.
Whipcord jackets.....	Workman Uniform Co., Ltd., Montreal, P.Q.
Drill shirts.....	Empire Shirt Mfg. Co., Louise- ville, P.Q.
Woollen drawers and shirts...	Mercury Mills Ltd., Hamilton, Ont.
Canvas shoes.....	Great West Felt Co., Ltd., Elmira, Ont.
Felloes.....	Ottawa Car Mfg. Co., Ottawa, Ont.
Floats.....	Fairechild Aircraft Ltd., Long- ueuil, P.Q.
Tent pins.....	Canada Spool and Bobbin Co., Ltd., Walkerton, Ont.
Reinforcing steel.....	Burlington Steel Co., Hamil- ton, Ont.
Steelwire fabric.....	Truscon Steel Co., Montreal, P.Q.
Towing attachments.....	Mis-Canada Mfg. Co., Ottawa, Ont.
Mattresses.....	Simmons Ltd., Winnipeg, Man.
Double deck bedsteads.....	Western Steel Products, Ltd. Winnipeg, Man.
Enamelware, etc.....	General Steel Wares Ltd., Montreal, P.Q.

## DEPARTMENT OF PUBLIC WORKS

*Contracts in Group "A" (Construction, etc.)*

Construction of breakwater reinforcement and extension at Petit Cap, Gaspé County, P.Q. Name of contractor, Mr. Lewis Maloney, Barachois de Malbaie, P.Q. Date of contract, February 10, 1934. Amount of contract, \$28,253.25. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of Wages	Hours of Labour
	Not less than	Not more than
	per hour \$ cts.	per day
Blacksmith.....	0 45	8
Machinist (repair man).....	0 50	8
Carpenters and joiners.....	0 50	8
Timbermen and cribmen (using such tools as broad-axe, adze, saw, hammer, auger).....	0 37½	8
Teamsters, horse and cart.....	0 45	8
Teamsters, team and wagon.....	0 55	8
Drill runners.....	0 40	8
Boatmen.....	0 30	8
Firemen (stationary).....	0 35	8
Hoist operator (gasoline).....	0 45	8
Motor truck drivers.....	0 35	8
Compressor operator.....	0 40	8
Diver.....	1 00	8
Labourers.....	0 30	8

Construction of built-up steel land and pon-  
toon discharge pipes for Dredge P.W.D. No. 5  
(Northumberland). Name of contractors,  
Farand & Delorme Ltd., Montreal, P.Q. Date

of contract, February 19, 1934. Amount of  
contract, \$3,728. The General Fair Wages  
Clause was inserted in this contract.

## POST OFFICE DEPARTMENT

Following is a statement of payments made  
in February, 1934, for supplies ordered by the  
Post Office Department under contracts which  
were subject to regulations for the suppres-  
sion of the sweating system, the securing of  
the payment to the workers of fair wages, and  
the performance of the work under proper  
sanitary conditions:—

Nature of Orders	Amount
<i>Making metal dating stamps and type, brass crown seals, cancellers, etc.</i>	\$ cts.
Pritchard-Andrews Co. of Ottawa, Ltd.....	238 82
<i>Making and repairing rubber stamps, daters, etc.—</i>	
Pritchard-Andrews Co. of Ottawa, Ltd.....	239 90
<i>Making and supplying letter carriers' uniforms—</i>	
Paton Mfg. Co., Ltd., Montreal, P.Q.....	5,945 18
Wm. Scully, Ltd., Montreal, P.Q.....	336 57
Workman Uniform Co., Ltd., Montreal, P.Q..	586 27
<i>Mail Bag Fittings—</i>	
F. W. Carling, Ottawa, Ont.....	2,464 40
W. Wickware, Ottawa, Ont.....	86 80
C. Richardson & Co., St. Mary's, Ont.....	477 00
<i>Scales—</i>	
Pritchard-Andrews Co., of Ottawa, Ltd.....	629 05
<i>Letter Boxes—</i>	
Engine Works & Trading Inc., Montreal, P.Q.	834 96

## DEPARTMENT OF RAILWAYS AND CANALS

*(Contract in Group "A"—Construction, etc.)*

Construction of certain repairs to the upper  
entrances of North and South Locks No. 2,  
Lachine Canal, Montreal, P.Q. Name of con-  
tractors, Campbell Construction Co., Ltd.,  
Montreal, P.Q. Date of contract, February  
7, 1934. Amount of contract, approximately  
\$47,213.50. A fair wages schedule was inserted  
in the contract as follows:—

the working hours of any class of workers are less than 48  
per week, such lesser hours shall not be exceeded on this  
work.

Fair Wages Conditions in Harbour Commission Contracts

Under the Fair Wages Order in Council it is provided that certain conditions, referred to therein as "A" Conditions, shall, as far as practicable, be observed by the department or departments of the Government of Canada in connection with all agreements made by the Government involving the grant of Dominion public funds in the form of subsidy, advance, loan or guarantee for any of the purposes mentioned. Under this authority, fair wages conditions are prepared from time to time in the Department of Labour for insertion in contracts awarded by the Harbour Commissioners throughout Canada. The labour conditions in question are similar to those which are applicable to contracts awarded by the several departments of the Dominion Government and include either a fair wages schedule or the General Fair Wages Clause.

The Department of Labour has been notified that the following contracts have been awarded under the above-mentioned conditions:—

Montreal Harbour Commissioners.

Construction of an extension to wharf, Montreal, P.Q. Name of contractors, Atlas Construction Co., Ltd., Montreal, P.Q. Date of contract, September 11, 1933. Amount of contract, \$79,743.38. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rate of Wages	Hours of Labour
	Not less than	Not more than

The Nova Scotia Gazette, February 21, 1934, contained notice of the appointment of the Hon. Frank Roy Davis and the Hon. Michael Dwyer, members of the Executive Council, and Messrs. Gordon B. Isnor and George E. Hagen, members of the Legislature, to be members of the Legislature Internal Economy Board, the Hon. Mr. Davis to be chairman of the Board.

The Danish Government, according to a statement issued by the Ministry of Social Affairs in January, has instructed the Unemployment Council, among other proposed activities, to examine the possibility and practical effects of a more considerable reduction of hours than that proposed in the Bill at present before the legislature, which seeks to introduce the 40-hour week in public works and work subsidised out of public funds. It will devote special attention to the question of securing, especially for those whose wages are lowest, some direct or indirect compensation for the loss of earnings resulting from reduction of working hours. In this connection it will study the question of a minimum wage. The Unemployment Council will continue the task already entrusted to it of examining plans for public works and other measures intended to reduce unemployment. The membership of the Council has been increased by the inclusion of representatives of the Administration, the trade unions, commerce, agriculture and economic science.

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Manufacturing: Printing and Publishing

EDMONTON, ALBERTA.—TWO NEWSPAPER PUBLISHERS AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, LOCAL No. 255.

Agreement to be in effect from May 28, 1933 to May 27, 1934. If a renewal or a new agreement cannot be reached, it will be referred to arbitration.

Only union members to be employed as pressmen and foremen.

Hours: 45 per week.

Overtime: time and one-half for overtime and work on statutory holidays, except Sundays and Christmas day which shall be paid at double time rate.

Wages for journeymen pressmen: 85 cents per hour. (The previous rate was 96 cents for day work and \$1.02 for night work). Foremen at least \$5 per week extra.

Wages for apprentices: first year \$10 per week, second year 33½ per cent of journeymen's rate, third year 40 per cent, fourth year 55 per cent, fifth year 65 per cent.

Two weeks' notice to be given of dismissal or resignation.

Provision is made for the settlement of any disputes by arbitration.

EDMONTON, ALBERTA.—CERTAIN JOB PRINTING OFFICES AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, LOCAL No. 255.

Agreement to be in effect from May 16, 1933, to May 15, 1934.

Only union members to be employed.

The minimum number of pressmen and assistants required to work on each type of machine is specified.

Hours: 44 per week for day work, 42 for night work.

Overtime: time and one-half for first three hours, double time thereafter. Time and one-half for work on statutory holidays and double time for Sunday work.

76113-5

Wages for journeymen pressmen: 85 cents per hour for day work and 90 cents for night work (formerly 96 cents for day work and \$1.06 for night work). Offset pressmen 5 cents per hour extra. Wages for assistants: from \$10.25 per week during first six months to \$18 per week after three years.

Wages for apprentices: from 25 per cent of journeymen's rate during first year to 65 per cent during fifth year. Apprentices must pass quarterly examinations in order to qualify for the raise in pay.

Provision is made for arbitration in case of any disputes.

The union label to be used on all printing where a label is called for.

### Manufacturing: Wood Products

KITCHENER, ONTARIO.—A CERTAIN UPHOLSTERING COMPANY AND THE SHOP COMMITTEE OF THEIR EMPLOYEES.

Agreement reached following strike reported on page... of this issue.

Agreement to be in effect from February 21, 1934 to September 1, 1934.

The company recognizes the right of its employees to be members of the Furniture and Woodworkers Industrial Union or any union of their own choice, but no employee shall be compelled to belong to any union. No discrimination against employees on account of union activity.

Hours: 44 per week.

Overtime: all work over 49 hours per week to be paid at time and one-quarter.

Wage rates vary from 24 to 55 cents per hour for men and from 26 to 29 cents for women employees. Certain increases in piece work rates are provided for.

During slack periods, work in each department to be distributed as equally as possible.

The company recognizes the shop committee as the official representative of its employees, and all grievances to be settled between this committee and the management.

### Transportation and Public Utilities: Local Transportation

VANCOUVER AND NEW WESTMINSTER, B.C.—ASSOCIATED DAIRIES LIMITED OF B.C. AND THE INTERNATIONAL BROTHERHOOD OF TEAMSTERS, CHAUFFEURS, STABLEMEN AND HELPERS, LOCAL No. 464 (MILK DRIVERS AND DAIRY EMPLOYEES).

Agreement, reached following conciliation by an officer of the Federal Department of Labour, to be in effect from November 1, 1933, to November 1, 1934, and thereafter from year to year until notice.

This agreement is the same as the one previously in effect and summarized in the *LABOUR GAZETTE*, December, 1932, page 1337.

Wage rates are unchanged: a basic rate of \$79 per month with a commission on sales for retail salesmen, and for wholesalersmen, helpers and inside help from \$112.50 per month for helpers to \$140 for outside relief men.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, FEBRUARY, 1934

### Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month continued upward, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being higher, the former because of the higher cost of foods and the latter due mainly to higher prices for live stock, meats, butter, eggs, grains and certain milled products.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities in Canada was \$7.63 at the beginning of February as compared with \$7.50 for January; \$6.70 for February, 1933; \$11.83 for February, 1930; \$11.50 for February, 1926; \$10.61 for February, 1922; \$16.92 for June, 1920 (the post war peak); and \$7.75 for February, 1914. The advance during the month was due mainly to higher prices for meats, butter, cheese and potatoes. Eggs showed a substantial seasonal fall. Including the cost of fuel and rent with that of foods the total budget was \$16.09 at the beginning of February as compared with \$15.95 for January; \$15.61 for February, 1933; \$22.12 for February, 1930; \$21.87 for February, 1926; \$21.07 for February, 1922; \$26.92 for July, 1920 (the post war peak); and \$14.54 for February, 1914. Fuel and rent were unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics was again considerably higher at 72.1 for February as compared with 70.6 for January; and 63.6 for February, 1933. Some comparative figures for earlier dates are 93.9 for February, 1930; 102.2 for February, 1926; 98.3 for February, 1922; 164.3 for May, 1920 (the post war peak); and 64.8 for February, 1914. One hundred and seventy-nine prices quotations were higher, fifty-six were lower and three hundred and thirty-two were unchanged.

In the grouping according to chief component materials five of the eight main groups were higher, two were lower and one was unchanged. The groups which advanced were: the Vegetables and Vegetable Products group, owing mainly to higher prices for wheat, oats, rye, flax, bran, shorts and tea; the Animals and their Products group, because of higher prices for live stock, butter, eggs and meats which more than offset lower prices for furs and leather; the Fibres, Textiles and Textile Products group, due

mainly to higher quotations for raw cotton, raw silk, cotton knit goods and worsted cloth yarns; the Wood, Wood Products and Paper group, chiefly on account of increased quotations for lumber; and the Iron and its Products group, because of advanced prices for steel tank plates and galvanized wire. The Non-Ferrous Metals and their Products group and the Non-Metallic Minerals and their Products group declined, the former because of lower prices for tin, aluminium and zinc which more than offset higher prices for copper and silver, and the latter owing chiefly to lower prices for domestic coal. The Chemicals and Allied Products group was unchanged.

In the grouping according to purpose consumers' goods were higher, mainly because of advanced prices for foods, chiefly meats, milk and its products, eggs and certain milled products. Producers' goods were also higher, mainly because of higher prices for materials for the meat packing industries, for the textile industries and for the milling industries.

In the grouping according to origin raw and partly manufactured goods and fully and chiefly manufactured goods were both higher. Canadian farm products, articles of marine origin and articles of forest origin advanced while articles of mineral origin were slightly lower.

### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of February of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first-class is of houses in good condition, favourably located in such districts with good

(Continued on page 284)

**COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL, AND LIGHTING, AND RENT IN  
TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA**

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family

(Continued from page 276)

modern conveniences. The second-class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The figures as to rental are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amounts due.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which statistics were available when first published in the LABOUR GAZETTE in January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the

western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

## Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living, based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number for rent is calculated for each city

\*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18%; Clothing, 18%; Sundries, 20%.

from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and costs of the various items from 1913 to 1926, weighted according to the importance of each item in workingmen's family expenditure, and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

#### Retail Prices

Beef prices again advanced in most localities, sirloin steak being up from an average price of 20 cents per pound in January to 20.9 cents in February, round steak from 16 cents per pound to 17 cents and shoulder roast from 10.9 cents per pound to 11.4 cents. Veal was  $\frac{1}{2}$  cent per pound higher at 12.5 cents and mutton was up from 19 cents per pound to 19.9 cents. Pork prices were generally

higher, fresh averaging 16.6 cents per pound in January and 19.4 cents in February and salt pork averaging 15.7 cents per pound in January and 17.4 cents in February. Bacon was also substantially higher at an average price of 24.4 cents per pound as compared with 21.6 cents in January. The price in February, 1933, was 17.4 cents per pound.

Eggs showed a substantial seasonal fall in practically all localities, fresh being down from an average price of 40.7 cents per dozen in January to 35.3 cents in February and cooking from 30.2 cents per dozen to 28.4 cents. In February, 1933, the price of fresh eggs averaged 28.8 cents per dozen and cooking 22.5 cents. The price of creamery butter was up from an average of 28.4 cents per pound in January to 29.7 cents in February. Cheese was fractionally higher at 20.1 cents per pound.

The price of bread was fractionally lower at an average of 5.8 cents per pound. Potato prices were considerably higher in most localities in Ontario and the other eastern provinces but were little changed in the western provinces. The Dominion average for February was \$1.18 per ninety pounds as compared with \$1.09 in January and 95 cents in February, 1933. Granulated sugar was unchanged at an average price of 8 cents per pound. Tea was somewhat higher in most localities, the price averaging 47.4 cents per pound in February as compared with 45.7 cents in January and 42.2 cents in February, 1933. Few changes were reported in coal prices, United States anthracite averaging \$15.20 per ton and bituminous coal \$9.26 per ton. No changes were reported in rent.

Following are the prices reported for Welsh coal, domestic sizes: Halifax, \$16.50; Windsor, \$16.50; Charlottetown, \$14.40; Moncton, \$16; Saint John, \$14; Quebec, \$13.50; Three Rivers, \$15; Sherbrooke, \$16.25; St. Hyacinthe, \$14.75; Montreal, \$14.75; Ottawa, \$16.75; Kingston, \$15.50; Belleville, \$16; Peterborough, \$16.25; Oshawa, \$14.75; Toronto, \$14.75; St. Catharines, \$15.50; Hamilton, \$14.50; Galt, \$15.50-\$16; St. Thomas, \$15; Sudbury, \$17; Cobalt, \$17.75; Timmins, \$19; Port Arthur, \$16.50; Fort William, \$16; Winnipeg, \$19.50.

#### Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices during the month moved within narrow limits. No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, was up from an average price of 65 cents per bushel in January to 65.6 cents in February. During the first half of the month prices were somewhat lower but toward the end an advance occurred due it

was said in part to the unfavourable weather conditions in Europe and in the United States. In coarse grains western oats rose from 33·5 cents per bushel to 33·7 cents, flax from \$1·48 per bushel to \$1·506, rye from 45·8 cents per bushel to 46·6 cents and barley from 38·8 cents per bushel to 40 cents. Bran and shorts at Montreal were substantially higher, the former being up from \$20·05 per ton to \$23·75 and the latter from \$20·93 per ton to \$25·75. Raw sugar at New York was up from \$1·16 per hundred pounds to \$1·36, while granulated at Montreal was unchanged at \$6·37 per hundred pounds. Ceylon rubber at New York advanced from 9·3 cents per pound to 10·5 cents. Greatly increased consumption in the United States as compared with the previous year was mentioned as a factor in this advance. In live stock choice steers at Toronto were up from \$5·54 per hundred pounds to \$5·83 and at Winnipeg from \$4·15 to \$4·58. Bacon hogs at Toronto advanced from \$8·11 per hundred pounds to \$9·67 and at Winnipeg from \$7·63 per hundred pounds to \$8·76. Lambs at Toronto advanced from \$7·21 per hundred pounds to \$7·93. The price of eggs at Montreal was substantially higher at an average of 43·1

cents per dozen as compared with 31·9 cents in January. The price at Toronto was also considerably higher at 40·5 cents per dozen as compared with 29·8 cents the previous month. Stocks in cold storage at the beginning of February were very much lower than at the beginning of January and supplies of fresh eggs were considerably decreased from the previous month. Stocks of creamery butter in cold storage at the beginning of February were 13 per cent below holdings on the same date a year ago and 33 per cent lower than at the beginning of January of this year. Creamery butter at Montreal advanced from 27·2 cents per pound to 29·7 cents and at Toronto from 27·2 cents per pound to 28·9 cents. The price of raw cotton at New York was up from 11·3 cents per pound to 12·4 cents. The advance was said to be due to reports regarding the adoption by the United States government of measures to curtail acreage for the 1934 crop. Raw wool was down from 24·25 cents per pound in January to 22·5-24·5 cents in February. In lumber Canadian white pine was \$5 per thousand board feet higher at \$80. A grade of spruce was up from \$17 per thousand board feet to \$19.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes afford information as to significant changes in prices in Great Britain and certain other countries. The authorities for the wholesale prices index numbers are named in all cases. The latest table showing cost of living and wholesale prices index numbers for various countries appeared in "Prices in Canada and Other Countries, 1933," issued as a supplement to the LABOUR GAZETTE, January, 1934.

### Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1924=100, was 63·0 for January, an increase of 1·9 per cent for the month. This advance was general, as every one of the ten groups showed some increase. Textiles and coal showed the greatest increases for the month, with a rise of 7·8 per cent in wool prices and of 4·8 per cent in cotton.

The *Statist* index number, on the base 1867-1877=100, was 82·5 at the end of January, an increase of 3·1 per cent for the month. All of the six groups were included in the general rise, the "sugar, coffee and tea" group advancing 12·4 per cent and textiles 8 per cent over the previous month's level.

COST OF LIVING.—The Ministry of Labour index number, on the base July, 1914=100, was 141 at the beginning of February, a decline of one point for the month due to lower

food prices, chiefly eggs and butter, which was partly offset by an advance in bacon prices.

### France

WHOLESALE PRICES.—The General Statistical Office index number, on the base 1914=100 (gold index) was 79 for January, showing no change in the general level for December, nor was there any marked change in any of the groups for the month.

### Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100, was 96·3 for January, an increase of 0·1 per cent for the month. Except for an advance of 5·7 per cent in textiles, there were no marked changes in any of the different groups.

COST OF LIVING.—The official index number, on the base 1913-1914=100, was 120·9 for January, showing no change from the previous month. A slight advance in clothing prices was offset by small decreases in the food and sundries groups.

### South Africa

COST OF LIVING.—The index number of retail prices of the Census and Statistics Office, on the base 1910=1000, was 1282 for December, as compared with 1280 for November. A slight decrease in the food group was more than counteracted by increases in other groups.

### United States

**WHOLESALE PRICES.**—The Bureau of Labour Statistics index number, on the base 1926=100, was 72.2 for January, an increase of 2 per cent for the month. Slight decreases were noted in fuel and lighting materials and house-furnishing goods, but the other eight groups were all included in the general advance. The principal increases were in farm products and foods.

*Bradstreet's* index number (continued by Dun and Bradstreet, Incorporated) which is the sum total of the prices per pound of 96 commodities of common consumption, was \$9.0110 at February 1, an increase of 2 per cent for the month and of 38 per cent over the February 1, 1933, level.

*Dun's* index number (continued by Dun and Bradstreet, Incorporated) which is based on the cost *per capita* of a year's supply of commodities, was \$164.530 at February 1, the highest point reached since November, 1930, and a gain of 28.1 per cent over February 1,

1933. As compared with January 1, 1934, there were advances in breadstuffs, meat, "other food", clothing and miscellaneous commodities, and decreases in dairy and garden produce and metals.

**COST OF LIVING.**—The National Industrial Conference Board index number of the cost of living for industrial wage earners, on the base 1923=100, was 77.5 for January, an increase of 0.3 per cent for the month and of 5.2 per cent for the year. Compared with January, 1933, the principal increase was in clothing and food prices, with slight advances in fuel and light and sundries and a decrease in housing.

The index number of the Department of Labour and Industries, Massachusetts, on the base 1913=100, was 128.8 for January, an increase of 1.4 per cent for the month. Increases are noted for the month in clothing, shelter and sundries, while food was lower and the fuel and light group was unchanged.

## FATAL INDUSTRIAL ACCIDENTS IN CANADA IN 1933

### Analysed according to Industries, Causes, Localities and Months

THE accompanying tables provide an analysis of the fatal accidents to persons in gainful occupations in Canada in the course of their employment during the calendar year 1933, according to causes, provinces and months, as well as by industries. Quarterly statements giving a table of the accidents occurring during the period covered appeared in the LABOUR GAZETTE, May, August and November, 1933, and February, 1934. The table includes fatalities from industrial diseases reported by the provincial workmen's compensation boards.

The record is compiled from reports from the following government authorities: the Board of Railway Commissioners; the Explosives Division of the Department of Mines, Ottawa; the Workmen's Compensation Boards of Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia; the Ontario Factory Inspector; the Ontario Railway and Municipal Board; and the British Columbia Department of Mines. Reports were also received from the correspondents of the LABOUR GAZETTE, resident in the principal industrial centres throughout Canada.

Industrial accidents reported in the press are also included in the record after inquiry has been made to avoid duplication. Most of the accidents in agriculture are recorded from press reports, and while it is not known to what extent the accidents in this industry are covered, it is believed that in this respect the record is fairly complete. To a great extent, however, the information obtained

from press reports is used to supplement information received from official sources.

The table also includes summary figures for 1932, being a final revision of the figures published in the LABOUR GAZETTE, March, 1933, by the inclusion of accidents occurring in 1932 which were reported too late for incorporation into the annual statement. These accidents were included in the supplementary reports in the LABOUR GAZETTE, May, August and November, 1933, and February, 1934. The figures for 1933, being still incomplete, are accordingly to some extent not comparable with the completed figures for 1932.

In some industries where considerable changes in figures from year to year appear, these may be attributed to changes in industrial conditions or to particular occurrences in certain industries; for example, in agriculture, mining, manufacturing, construction, transportation and service, the decrease in the number of fatalities may be largely due to there being a reduction in the number of men engaged in these industries. As in 1932, the most marked decrease in any of these groups was in construction, due to the fact that this industry suffered the greatest reduction in its workers.

Two of the most serious accidents during the year were in logging, one of them occurring on Lac Creux, Quebec, on May 20, when several sticks of dynamite exploded on a craft on which a party of men had set out to blow up a pile of logs which was obstructing logging operations. Seven log drivers

(Continued from page 287)

were killed by the force of the explosion which resulted from a detonator cap dropping into the load of dynamite. The other major logging accident occurred on the Salmon River, near St. Martins, New Brunswick, on October 26, when seven log drivers were trapped on a sand bar by rapidly rising waters following heavy rains and were drowned on attempting to cross the river. Another serious accident was caused by a fire in a match factory at Hull, Quebec, on March 15, in which six employees lost their lives. Five female employees were burned to death and one man died from burns on April 14. Twenty-one other employees received injuries but not fatal. The coroner's report recommended that the proper authorities enforce stricter regulations respecting match factory buildings.

Three miners were crushed under a rock slide at Flin Flon, Manitoba, on February 27, and three trainmen were killed at Acadieville, New Brunswick, on January 29, when an engine collided with a snow plough. When a plane crashed into Emma Lake, Sas-

katchewan, on June 21, three airmen lost their lives while engaged in forestry patrol. Three workers in an explosives factory lost their lives following an explosion of nitroglycerine, at Beloeil, Quebec, on July 19. Three men were drowned from a boat while preparing a regatta course near St. Catharines, Ontario, on July 26. Three plumbers were burned to death when a steam pipe exploded at Toronto, Ontario, on November 27.

### Fatalities by Causes

The classification of fatal accidents according to causes shows that the largest number, 229, came under the category "by moving trains, vehicles, etc." This includes all accidents due to cars or engines, including mine and quarry cars, and to automobiles and other power vehicles and horse-drawn vehicles, as well as accidents caused by moving implements (both those impelled by power and those drawn by horses), by moving watercraft and by aircraft. The largest number of accidents thus caused, 62, appear under the heading, automobiles and other power vehicles and implements. Also 48 were

caused by persons being struck or run over by, or crushed by or between cars and engines, 26 of these being engaged in steam railways; 45 were in connection with water-craft (18 being in fishing and trapping, 9 in logging and 6 in water transportation); 25 were caused by animal drawn vehicles and implements (20 of which were in agriculture, accidents primarily caused by animals being classified elsewhere); 19 were due to derailments and collisions (17 in steam railways); 12 were caused by mine and quarry cars, 10 by persons falling from or in cars or engines, and 8 by aircraft.

"Falls of persons" caused 115 fatalities, including 42 falls into pits, shafts, harbours, rivers, etc. (some of which resulted in drowning), 26 falls from elevations, 13 falls from loads, etc., 11 due to collapse of support, 10 from ladders, 6 into holds of vessels, 2 due to falls on the level, 2 down stairs and inclines, 2 into tanks, vats, kilns, etc., and 1 on sharp objects.

Fatalities numbering 115 were also caused by "falling objects," of which 46 were due to falling trees and limbs, 32 to objects falling

in mines and quarries, 18 to objects falling from elevations, loads, piles, 12 to breaking or loosening of straps, cables, etc., 4 to other falling objects and 3 to collapse of structure.

Next in order as a cause came "dangerous substances," 107 in number, of which 44 were due to explosive substances, 19 to electric current, 18 to hot and inflammable substances and flames, 13 to gas fumes, etc., 7 to steam escapes, boiler explosions, compressed air, 5 to conflagrations, and 1 to mine explosions from gas, coal dust, etc.

Animals caused 29 fatalities, including 19 caused by horses. There were 26 fatalities caused by prime movers, 25 fatalities were caused by striking against or being struck by objects, of which 22 were due to being struck by objects and 3 to striking against objects. There were 21 fatalities caused by handling of heavy or sharp objects, 12 by hoisting apparatus, 9 by working machines, and 8 by tools.

The category "other causes" includes 77 fatalities, of which 2 deaths were following infection, 19 due to industrial disease, strains,

## Fatalities by Provinces

etc., 16 to drownings not elsewhere specified, 7 to shooting and violence, 18 to cave-ins, land slides, ice jams, etc., 14 to lightning, frost, storms, sunstroke and 1 accident as to which no particulars were available.

The classification of fatal accidents according to provinces shows that the largest number, 247, occurred in Ontario. There were 185 in Quebec, 113 in British Columbia, 67 in Nova Scotia, 48 in Saskatchewan, 46

in Alberta, 29 in New Brunswick, 24 in Manitoba, 7 in Prince Edward Island and 7 in the Yukon and North West Territories. In Ontario the largest proportion of fatalities occurred in transportation and public utilities, where there were 47, with 39 in agriculture, 39 in mining, non-ferrous smelting and quarrying, 28 in construction, 27 in manufacturing, 25 in service, 20 in trade, 10 in logging, 5 in fishing and trapping, 5 in electric light and power and 2 in finance. In Quebec, the largest number, 38, was in the manufacturing group, with 36 in transportation and public utilities, 30 in logging, 22 in agriculture, 16 in construction, 14 in service, 13 in mining, non-ferrous smelting and quarrying, 11 in trade and 5 in electric light and power. In Nova Scotia there were 19 mining fatalities and no other industry suffered so many fatalities in that province, while in Alberta and Saskatchewan the largest number was in agriculture, there being respectively 12 and 20 in this industry. In New Brunswick and Manitoba the largest number was in transportation and public utilities, there being 12 and 8 respectively in this group. In British Columbia there were 32 fatalities in logging, 23 in transportation and public utilities, 17 in mining, non-ferrous smelting and quarrying and 17 in manufacturing.

#### Fatalities by Industries

The total number of fatalities recorded for the year was 773, being classified under the various groups of industries as follows: transportation and public utilities, 154, or 19.92 per cent of the total; agriculture, 111, or 14.35 per cent; mining, non-ferrous smelting and quarrying, 107, or 13.84 per cent; manufacturing, 96, or 12.42 per cent; logging, 87, or 11.26 per cent; construction, 64, or 8.28

per cent; service, 57, or 7.38 per cent; trade, 48, or 6.21 per cent; fishing and trapping, 31, or 4.01 per cent; electric light and power, 15, or 1.94 per cent; and finance, 3, or 0.39 per cent.

The table of fatalities by months shows the highest point to have been reached in October, when there were 79, 73 in June and 73 in July, the average per month being 64.42. The low point for the year, 42, was reached in December. The table gives the number of persons gainfully employed in most of the industries, the latest census figures available being given in each case. For agriculture, logging, construction, trade, finance and service, etc., the figures were those of the decennial census of 1931, for manufacturing, from the annual census of industry for 1931, for mining, fishing, electric light and power, steam railways, street and electric railways, telegraphs and telephones, and express, from the annual census of industry 1932.

Prior to 1932 figures have been included showing for each industry the accident frequency, that is the number of fatalities per 1,000 persons employed. While the figures as to numbers employed were not in any instance those for the year under review, it was considered that they afforded a reasonably accurate estimate for this purpose, namely, to show the accident ratio in each industry as compared with the others. In the case of 1933 and 1932, however, the reduction in numbers employed has been so marked that figures for earlier years, though the latest available, do not afford even approximate estimates, and frequency rates based on them would be misleading and are therefore not given. The latest figures available as to numbers employed, however, are included for general comparative purposes.

### Fatal and Non-fatal Accidents in Canada recorded by Provincial Workmen's Compensation Boards

The Labour Department's records of industrial accidents include only fatal accidents and fatalities arising out of employment, that is from industrial diseases, etc. The only information of a comprehensive nature as to non-fatal accidents is from the records of the Workmen's Compensation Boards in the various provinces, except that in manufacturing, mining, and steam and electric railway operation accidents are dealt with by various governmental departments and commissions, and these are also covered by the Workmen's Compensation Boards.

The annual reports of the Workmen's Compensation Boards are reviewed from time to time in the *LABOUR GAZETTE*, information being

given as to accidents, amounts paid in compensation, etc. The annual reports of the several Workmen's Compensation Boards for 1932 were summarized in the following issues: New Brunswick, April 1933, page 398; Alberta, May 1933, pages 518-519; Ontario and Manitoba, June 1933, pages 604-607; Quebec, August 1933, pages 771-775; Saskatchewan, September 1933, page 919; Nova Scotia and British Columbia, October 1933, pages 993-995.

None of the provincial Boards have jurisdiction over all industries, so that the accidents recorded are those in certain industries only. Most of the Boards deal with accidents in logging, mining, manufacturing, construction, transportation and public utilities, ex-

(a) Accidents requiring medical treatment but not causing disability for a sufficient period to qualify for this compensation. The period varies in the several provinces; figures not reported by some Boards.

(b) The province of New Brunswick Board reports 1,774 minor accidents in 1929, 1,580 in 1930, and 442 in 1931, involving no compensation or medical aid.

(c) Saskatchewan from July 1, 1930.

(d) Cases of "medical aid only" included only after Sept. 1, 1931.

(e) Preliminary figures.

cluding agriculture, trapping, finance, domestic service, etc., but including to some extent fishing, trade and government service.

The accompanying table summarizes the figures as to fatal and non-fatal accidents recorded by the several Provincial Workmen's Compensation Boards for 1929, 1930, 1931, 1932 and also gives some preliminary figures for 1933. It may be observed that the Department of Labour's figures show 974 fatal industrial accidents as occurring during 1932, while the total number of fatal accidents which were included by the Provincial Work-

men's Compensation Boards for that year was 622, these figures including none for Prince Edward Island. This difference is largely accounted for by the fact that the Provincial Boards do not include accidents in all industries. In addition, however, the Board's records include only accidents to employees, while the labour Department's records include accidents to all persons when occupied in industry, including employers and workmen carrying on their own business, and there are many such, particularly in trucking, trade, etc., as well as in agriculture.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Scope of Employment Enlarged by Unforeseen Emergency

Two widows brought actions against the Workmen's Compensation Board of New Brunswick for payment of compensation for the deaths of their husbands, who lost their lives when overcome by gas in an abandoned mine into which they had gone to assist in an attempt to rescue children who had fallen into the mine. The two men were at the time engaged as miners in work for their employer. The circumstances were described by the Board as follows: "Some children were playing on the property of the Miramichi Lumber Company at Minto. Apparently four of them attempted to climb down the ladder of an abandoned mine and on reaching the bottom were overcome by gas. The alarm was given sometime between 11.30 or 12.00 o'clock a.m., when the miners of the working pits were at dinner. Immediately a number of miners went to their rescue. A Mr. Tooke and Mr. Bauer were the first two to go down the dis-used shaft to rescue the children. They were both overcome by gas, then a Mr. Betts and a Mr. Gallant went down to help. Mr. Gallant got to the bottom of the pit and was overcome by the gas and did not survive. Mr. Betts attempted to climb out of the pit, but before he got to the top, fell and was killed; there can be no doubt he was killed by the fall which was caused by his being overcome by the gas." The majority of the Board had disallowed the claims of the two widows, on the ground that the mine was not in actual operation, that the deceased were not engaged in "mine rescue" work on behalf of their fellow workmen, and that the accident did not arise out of their employment.

The Act allows an appeal from a decision of the Board on a question as to its jurisdiction, or on a question of law; and appeals being taken by the claimants, the Appeal Division of the Supreme Court of New Brunswick, by a majority decision (Chief Justice Hazen dissenting) dismissed the appeal from the Board's decision. On further appeal by the plaintiff the Supreme Court of Canada allowed the appeal and sent the case back to the Board for reconsideration.

Mr. Justice Crocket delivered the opinion of the Supreme Court of Canada. He held that the deceased miners were engaged in "mine rescue" work (which had been denied in the Board's decision) notwithstanding that the actual operation of the mine in question had ceased or been suspended; that as a matter of law their deaths might well have been

held to have been caused by an "accident arising out of and in the course of their employment" in the sense of arising out of or in the course of something reasonably incidental to the work they were employed to do.

"To limit 'employment' to the actual, particular work the workman is engaged to do, in this case, would be to limit it to the actual work of mining coal. Baxter, J., in his very exhaustive opinion in fact says:—'The work which all these men were employed to do was to mine coal,' but he adds:—'The orders, express or implied, of the employer must be in relation to that occupation or the things incidental to it,' thereby fully recognizing the principle that not only the usual work of the workman is to be regarded but anything he may do which is incidental thereto.' That learned Judge also quoted the dictum of Lord Atkinson in *St. Helens Colliery Co. v. Hewitson*, (1924) A.C. 59, at p. 71, regarding the test which the latter said he had been rash enough to suggest, *viz.*, 'that a workman is acting in the course of his employment when he is engaged in doing something he was employed to do. Or what is, in other and I think better words, in effect the same thing—namely, when he is doing something in discharge of a duty to his employer, directly or indirectly, imposed upon him by his contract of service.'

"With all deference, I venture to think that the learned Judge of the Appeal Division laid too much stress upon this dictum, and attached to it a narrower meaning than Lord Atkinson himself intended. The very illustrations the latter gives in the next following paragraph seem to me to show that when he spoke of 'duty' he had no thought of restricting its application to something the workman was actually obliged to do by his contract of service. 'For instance,' he said (p. 71), 'haymakers in a meadow on a very hot day are, I think, doing a thing in the course of their employment if they go for a short time to get some cool water to drink to enable them to continue the work they are bound to do, and without which they could not do that work, and workmen are doing something in the course of their employment when they cease working for the moment and sit down on their employer's premises to eat food to enable them to continue their labour.'

"Workmen stopping work for the moment and going to get some cool water to drink or sitting down on their employer's premises to eat food cannot surely be said to be doing

something in discharge of a duty to their employer either directly or indirectly imposed upon them by their contract of service, if the word 'duty' is to be read in its strict literal sense; yet Lord Atkinson himself gives these very instances as instances of cases which would fall within the terms of his test. . .

"It goes without saying that it would be quite impossible for any one to devise any test which would apply to all of the many and differing cases which are constantly arising under the Workmen's Compensation Acts.

"Baxter J., however, quotes in part a dictum from the opinion of Lord Macmillan in *Sparey v. Bath Rur. Dist. Council*, 48 T.L.R., at p. 91, which seems to me to define in the clearest possible way the real issue which the Compensation Board had to consider in the case at bar, namely:—'The question is whether the workman when he was injured in his capacity as an employee doing something referable to his employment or was in his capacity as a citizen doing something independent of his employment.'

"This helpful dictum, however, does not attempt to define the scope of the word 'employment' but the sentence immediately preceding it, with equal clearness, sheds valuable light upon the question of employment also. In this he says:—'The place where an accident occurs to a workman is not the determining element in deciding whether it occurred in the course of the employment, though it may be a very important element, *for the course of employment is not a matter of physical locality but of legal relationship.*'

"In this view and having regard to the special provisions of the New Brunswick Act already discussed, I cannot for my part appreciate upon what logical ground the word 'employment,' as used in this Act, can be said to be limited to the particular work described in his contract of service. That a workman may be impliedly authorized in an emergency to do something which does not fall within the scope of his ordinary duties under his contract of service must now, I think, be taken to be settled rule of law. . .

"Baxter, J., suggests that this principle applies only to emergencies in which the employer's property is involved. With every respect I think that the principle is not limited, and that it applies to any emergency in which the interests of the employer are in any manner involved. . .

"The clear result of the cases, in my opinion, is that the scope of a workman's employment, as indicated in his contract of service, whatever it is, may be impliedly enlarged by the occurrence of an emergency without any intervention on the part of the employer,

and that if the employment is thus enlarged, anything which the workman does in such an emergency is to be deemed quite as much a part of his employment as if it were comprehended in the contract of service itself. . .

"The vital question raised by the claims is not whether the act of Betts and Gallant in descending into the mine shaft was a duty which their contract of service as coal miners imposed upon them, as the Board manifestly assumed, or whether in going and participating in the work of rescue which the mine manager had undertaken at the shaft, they were doing something which they were either expressly or impliedly authorized to do.

"It is apparent that the proper solution of this question demands consideration of the entire evidence regarding the company's responsibility for the condition of the idle shaft and the presence in it of the noxious gas as well as its responsibility for the protection of that shaft as a source of danger; the giving of the alarm, the participation of the mine manager in the work of rescue, his bringing Bauer and other employees to the scene of the peril, and especially his directions as to the summoning of other employees from the neighbouring shafts. It is equally apparent from its decision that the Board ignored all such evidence, though it states that the evidence seemed to be clear and uncontradicted, and, we think also, from an examination of the entire evidence as contained in the appeal book, that the case was one in which the Board might well have found that the deaths of the applicants' husbands were caused by accident arising out of and in the course of their employment within the contemplation of the Act. . .

"I should have no hesitation in holding in the circumstances disclosed by the evidence that if the mine manager was responsible for the summoning of the unfortunate men from the scene of their work to help in the work of rescue, which he was directing as the manager of the mining company, their deaths while participating in the work of rescue were caused by accident arising out of and in the course of their employment within the contemplation of the Act. The difficulty is that this particular question as to their going to and participating in the rescue in consequence of orders or directions expressly given by the mine manager is entirely a question of fact, upon which, in the absence of a finding by the Board, we are precluded, we think, on such an appeal as this from ourselves making any such finding, notwithstanding the Board's statement that the evidence is uncontradicted.

"After much anxious consideration of this aspect of the case, I have concluded that all

we can do is to send the case back to the Board for reconsideration in the light of what we have here held to be the true construction of s. 7 of the statute.

"The appeal should be allowed with costs in this Court and in the Appeal Division."

*Betts and Gallant versus Workmen's Compensation Board of New Brunswick* (Supreme Court of Canada), 1934, *Dominion Law Reports*, vol. 1, page 438.

#### **Truck used in Debtor's Occupation exempted from Seizure under Execution**

The City Solicitor of Halifax asked for a statement of opinion by a judge in the Nova Scotia Supreme Court in the matter of a claim of a judgment debtor for exemption from certain executions in the City Civil Court. The judgment debtor was a truckman, and earned his living solely by the use of a single motor truck. This truck had been levied on by the City Marshall under the executions.

Mr. Justice Doull said: "The question then is whether the truck is exempt. If the truck is absolutely the only chattel of the debtor under the description of 'tools and implements ordinarily used in the debtor's occupation to the value of thirty dollars', I find that the question is covered by authority, *Lavell v. Ritchings* (1906), 75 L.J.K.B. 287, and that the article being indivisible is protected even if it is worth more than \$30.

"My greatest difficulty arises from the fact that the officer making the levy left on the premises a tarpaulin and a set of blocks of a greater value than \$30, which would in certain circumstances be used with the truck, but which would be useless to the debtor without it. If these are within the exempted category, the statutory exemption has been satisfied and the truck may be levied on.

"In 25 Corp. Jur. 51, under the title Exemptions, it is laid down that in exemptions of this kind the word 'necessary' for the debtor's trade or occupation usually appears, and where it does not appear it is understood and does not refer to tools merely convenient. If we apply this test we find that the truck is a necessary tool or implement or chattel, while the tarpaulin and blocks while under certain circumstances desirable are not within the definition.

"With some doubt therefore that the blocks and tarpaulin may be levied on, and deciding the matter on the basis that there is nothing else left on the premises to which this particular exemption can apply, I hold the truck exempt from seizure."

*Re Lyons* (Nova Scotia), 1934, *Dominion Law Reports*, vol. 1, page 432.

#### **Salary of Secretary-treasurer not Protected by Quebec Mining Act**

The secretary-treasurer of a mining company in the Province of Quebec which had made an authorized assignment under the Bankruptcy Act, instituted an action against the directors personally, to recover arrears of his salary to the amount of \$950. The plaintiff relied on section 10 of the Quebec Mining Act (Revised Statutes of Quebec, 1925, chapter 82), which provides as follows:—

Responsibility of directors for debts due labourers, etc.: Notwithstanding the provisions of this Act, the directors of the company shall be jointly and severally liable to the *labourers, servants and apprentices* of the company, for all debts, not exceeding one year's salary, due for services performed for the company whilst they are such directors, etc.

Mr. Justice McDougall, in the Superior Court, Montreal, dismissed the action, stating that in the opinion of the Court the plaintiff was not a "servant" in the sense contemplated by section 10. He considered that the omission of the word "clerk" in this section indicated that it was the intention of the Legislature to restrict the class of individuals who might invoke the section within narrower limits than in the case of the Companies Act. He cited the opinion of the late Mr. Justice Hall, in the case of *Fee versus Turner*, where his Lordship said:—

" . . . For lack of any other reason it occurs to me that what must have been had in view, was to protect to a limited extent those who were employed by such companies in positions which do not enable them to judge with any special intelligence what is the company's real financial position. The directors have personally this knowledge or should have it, and if, aware of the company's embarrassed affairs, and specially of the danger of a speedy collapse and insolvency, they continue to utilize the services of employees who have no means of securing this knowledge and who give their time and labour upon their sole reliance, often, on the good faith and respectability of the company's directors, it is not inequitable that such directors should be personally liable, within reasonable limits, for arrears of wages, thus given to their service. The Legislature has converted this equity into a law, but limited the application of it to arrears of wages for six months. . . For the contrary reason, the manager, the auditor and chief accountants, and general superintendent of a company, and similar employees, should not have a personal recourse against directors, because they know, or should know, whether the company's operations are being successfully carried on or not, and, in fact, it is upon their reports

and advice that the directors themselves generally decide upon the continuance or stoppage of the company's operations. . ."

In the present case, Judge McDougall continued, the plaintiff, as secretary-treasurer, had the means of knowing the financial condition of the company, and having failed to collect the arrears of his salary he could not seek the protection given by Section 10 to less highly placed employees.

*Jones versus Stadler et al* (Quebec) 1934, *Rapports Judiciaires de Québec (Cour Supérieure)* vol. 72.

### **Employee of Canadian National Railways not an Employee of the Crown**

An employee of the Canadian National Railways who had been in the employ of the C.N.R. or subsidiary companies, for 27 years, claimed that he was illegally dismissed, in October, 1932, without cause and without notice; that he had paid contributions to the fund established by the Intercolonial and Prince Edward Island Railways Employees' Provident Fund Act, and that he had a right to all the privileges and benefits provided by the Act. He therefore claimed that he was entitled to a settlement based on the amount of his annual earnings for the past eight years, or \$230 per month, and that the company should pay him a monthly allowance of \$113.13, or \$1,333.66 a year, representing a capital of at least \$15,000, together with \$230 in lieu of notice of dismissal.

The Company contended that in virtue of its rights under the Crown, it had the right to dismiss an employee at will, without cause or notice.

His Honour Judge Martineau, in the Superior Court, St. Hyacinthe, found that an employee of the Canadian National Railways in receipt of a monthly wage should be considered as being in the employ of the Company, and not of the Crown. He could be dismissed at will, but not without notice. A month's pay in lieu of notice was therefore allowed the plaintiff. On the other hand, the employee was not entitled to claim the amount of the capital represented by his interest in the Fund established by the Provident Fund Act.

*Kerouack versus Canadian National Railways* (Quebec), 1934 *Rapports Judiciaires de Québec, Cour Supérieure*, vol. 72, page 36.

### **Counselling an Offence distinguished from being Party to an Offence**

Two men, named Stewart and Irvine, charged with being members of an unlawful assembly in connection with a demonstration of unemployed at Edmonton on December 20, 1930,

were tried by Judge Ives, with a jury. The jury brought in a verdict of guilty, and the presiding judge sentenced Irvine to imprisonment at hard labour for two months, and sentenced Stewart (the appellant in this case) to imprisonment at hard labour for one year. Appeal was taken by Stewart in the Alberta Supreme Court against his conviction and sentence.

Mr. Justice McGillivray, in the Appellate Division of the Supreme Court, allowed the appeal, his judgment being in part as follows:—

"The evidence in this case discloses no justification for discrimination in the respective sentences. Aside from the somewhat defiant attitude of the appellant in addressing the Court before sentence, the only support for the imposition of such different sentences lies in the statement to the Court by Crown counsel after verdict concerning the previous convictions of the appellant. In this connection I think I should say it is unfortunate that in making this statement Crown counsel followed the wholly unwarranted course of telling the Court of the times that the accused had been previously tried for criminal offences although acquitted. I venture to remind those who are charged with the great responsibility of imposing sentences upon others of the warning sounded by the Lord Chief Justice of England in *Rex v. Durand* (1924), and approved by this Division in the *Scheer* case. The learned Chief Justice said: "In considering whether a sentence in such a case as this is proper, one has to beware of treating an offence as serious in itself because it has been committed by a man who previously has committed a series of offences."...

"The facts of the case upon which the Crown seeks to support the conviction of the appellant are stated by my brother Clarke. I only desire to add that it appears to be clear, as the learned trial Judge instructed the jury, that the appellant was not present at the assembly of people on December 20, certainly not at any time when that assembly could be said to be an unlawful assembly. I have no doubt that the accused could have been charged with counselling others to constitute an unlawful assembly, contrary to sec. 69 of the *Code*, and have been found guilty of the crime of counselling under that section, regardless of whether or not the persons counselled committed the offence which they were counselled to commit, (*Rex v. Brosseau* (1917) 56 S.C.R. 22) but the Crown did not see fit to charge the appellant and Irvine with the substantive offence of counselling, on the contrary they were specifically charged with being 'members of an unlawful assembly' (sec. 89). Now it is evi-

dent that a person cannot in fact be a member of an unlawful assembly at which he is not present and so on the facts of this case the Crown was driven to rely upon this sec. 69 of the *Code* which not only makes counselling a crime a substantive offence but also provides that every one is a party to and guilty of an offence who counsels or procures any person to commit that offence. Now there is a distinct difference between the charge of counselling others to commit an offence, and the charge of being party to an offence by virtue of having counselled someone to commit that offence. In the first case it is immaterial whether the offence is committed or not; in the second case the offence must be committed and it must be committed by the persons counselled ere the accused can be said to be a party to the offence committed. If this be so, as it unquestionably is, then the Crown must prove that the persons who were addressed by the appellant, and counselled to become members of an unlawful assembly, in fact did become members of such assembly before it can be held to be established that the appellant, who was not in fact present, was none the less a member of the assembly as charged...

"In the case at bar there is no evidence whatsoever that any person at any time addressed by the accused was a member of the unlawful assembly on December 20. It follows that the conviction cannot stand.

"It has been suggested that it would be strange justice if the agitator should escape whilst those to whom he appealed suffered the penalty. As to this I must say with great respect that it would seem to me much more strange and entirely contrary to well-established principles of our criminal law for the Court to countenance sustaining the conviction as an offence of counselling with which

the accused was not charged and on which he was not tried, or for the Court to supply an important link in the chain of proof which the Crown has through inability to provide it, or through carelessness, failed to supply. In the recent case of *Rex v. Lawrence* (1933) 3 Western Weekly Reports, page 102, Lord Atkin said in delivering the judgment of the Judicial Committee: 'Speaking generally, it has to be remembered that it is an essential principle of our criminal law that a criminal charge has got to be established by the prosecution beyond reasonable doubt; and it is essential that the tribunal of fact should understand this.'

"The rule thus restated is an axiom of our criminal law that has withstood the test of time. Applying it then to the proof adduced by the Crown in the case at bar, it seems to me abundantly clear that the Crown must fail for lack of proof of an essential ingredient of the offence charged and the circumstance, that the appellant might have been charged and convicted of another offence, is quite beside the point. I would allow the appeal and set aside the conviction.

Mr. Justice Clarke, in a dissenting judgment, pointed out that the assembly in question which, it was not disputed, was an unlawful assembly, was the very one counselled by the accused by his speech upon the previous day and it became unlawful in the very way contemplated by that speech. In view of the notoriety and of the large numbers at the previous meetings and of the surrounding circumstances the jury was justified in concluding that at least a considerable number of those who had heard the speeches by the accused responded to them and were present at the assembly in question.

*Rex versus Stewart* (Alberta) 1934, *Western Weekly Reports*, vol. 1, page 423.

### Social Policy of I. F. T. U.

The full text of the program of social policy which was adopted by the International Federation of Trade Unions at the 6th Congress held at Brussels last year (*LABOUR GAZETTE*, October, 1933, page 1006), was published in *Industrial and Labour Information* (Geneva), January 22, 1934.

The introduction sets forth the social principles which underlie the program. The main heads of the program are as follows:—

- (1) Liberty of Association.
- (2) Social insurance, to include compulsory systems in all countries of (a) sickness insurance; (b) invalidity, old age and survivors' insurance; (c) unemployment insurance; (d)

accident insurance or workmen's compensation. Social insurance, as a whole, must fulfil the following functions: the restoration of the health and earning capacity of the worker, the provision of the fullest possible compensation for the loss of wages or salary caused by the various evils covered by it, and the prevention of the onset of these evils by means of precautionary measures, chief among which are regulations for the prevention of industrial accidents and occupational disease.

- (3) Labour Protection, including the limitation of working hours, with 40 hours and 5 days per week as a maximum; universal prohibition of night work, etc.; provision for holidays and leisure; protection of children, young persons and women; limitation of home

work; collective agreements and trade union right of consultation.

(4) Adequate application and supervision of labour protection.

A pamphlet entitled "Agents of Revolution: a history of the Workers' Unity League, setting for its origin and aims" was published at Toronto recently by the direction of Hon. W. H. Price, K.C., Attorney General for Ontario.

The Department of Labour of Nova Scotia will conduct an investigation for the purpose of ascertaining in what industries of the Province legislation for an eight-hour working day may be enacted with a view to improving the working conditions of the people, without unduly injuring the industries affected.

A bill to restrict the hours of employment of young persons and to deal with other conditions in the distribution trades is now before the British Parliament. The measure will apply to a large number of young persons whose hours of work at present are either not regulated at all or are subject to the antiquated limit of 74, inclusive of meal times, contained in the Shops Act of 1912.

The Minimum Wage Board of Manitoba, at a meeting held at Winnipeg, on February 19, ruled that the 10 per cent reduction in the scale of minimum wages for female employees in the Province of Manitoba effected by the Board on March 1, 1933, shall continue and remain in force for a further period of six months, terminating September 1, 1934 (the text of last year's order was given in the LABOUR GAZETTE, March, 1933, page 280).

The Speech from the Throne at the opening of the Nova Scotia Legislature on March 1, contained the following statement:—"For some time past, conditions had been developing in the coal mining fields of Inverness and Pictou Counties, which were seriously impairing the productiveness of these coal areas, and causing severe loss to

provincial revenues. A better working arrangement has been arrived at in Inverness. By agreement among all parties, my Government employed an expert to investigate the conditions in Pictou County, guaranteeing the deficit resulting from the continuation of the former wage scale during the period of investigation. His report has been made, but unfortunately the expert was not able to find that the industry was capable of carrying a higher wage scale than that proposed by the operators. Taken as a whole, there has lately been a decided increase in the coal production of the Province."

Toronto Transportation Commission rolling stock and shops department has started a course of instructions for its repair employees, which includes the proper functioning and maintenance of all electrical and mechanical equipment with which equipment repairmen are called upon to deal. The first meeting in connection with the course, held at the Commission's school of instruction January 30, was attended by over 100 divisional and shop repairmen, car cleaners and other equipment maintenance employees. The officials conducting the course are using lantern slides, drawings and photographs in connection with the work. Instruction meetings are held each Tuesday evening, and the rolling stock and shops department has invited all employees to attend.

Testimony that one girl received \$2.70 for a week's work of 48 hours was presented in a Montreal court recently prior to conviction under the Quebec Women's Minimum Wage Act of the Joan Dress Company, operated by Moses Wilansky. A fine of \$50 was imposed. Another girl received \$4.40 for 48 hours work, according to the testimony presented by Minimum Wage Board officers. The minimum under the act is \$12.50 a week. Mr. Lucien Rodier, counsel for the board, said after the conviction yesterday that hereafter the board would lay a separate charge for every girl underpaid in a factory under investigation.

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

FURTHER improvement was recorded in employment at the beginning of March, according to returns received by the Dominion Bureau of Statistics from 8,499 employers of labour, each with a minimum of fifteen employees, and representing all industries except agriculture, fishing, hunting and highly specialized business. The working forces of these firms aggregated 861,044 persons, as compared with 849,056 in the preceding month. This increase was considerably above the average gain recorded in the thirteen years for which statistics are available; it also exceeded that noted on March 1 in any earlier year of the record except 1922, comparing favourably with the declines reported in the late winter of the last four years. The index number (based on the 1926 average as 100) stood at 92.7 as compared with 91.4 in the preceding month, while on March 1 in the last thirteen years it was as follows: 1933, 76.9; 1932, 88.7; 1931, 100.2; 1930, 110.2; 1929, 111.4; 1928, 102.6; 1927, 97.5; 1926, 92.6; 1925, 88.1; 1924, 91.8; 1923, 91.0; 1922, 82.9; 1921, 89.1.

At the beginning of March, 1934, the percentage of unemployed members registered by local trade unions stood at 20.0 in contrast with percentages of 21.2 at the beginning of February, 1934, and with 24.3 at the beginning of March, 1933. The percentage for March was based on the reports tabulated by the Department of Labour from 1,734 labour organizations with an aggregate membership of 148,048 persons.

Reports received from the offices of the Employment Service of Canada indicated a decline during February, 1934, in the average daily placements in employment as compared with those of the previous month, but an increase in comparison with February last year, the major change in each comparison taking place in the construction and maintenance group. Vacancies in February, 1934, numbered 29,972, applications 52,945, and placements in regular and casual employment 28,818.

In retail prices the cost per week of a family budget of staple foods, fuel and light-

ing, and rent at the beginning of March was again considerably higher due to advances in the cost of foods, chiefly meats, eggs, butter and potatoes. The cost of the budget for March was \$16.51 as compared with \$16.09 for February; \$15.59 for March, 1933; \$21.96 for March, 1930; \$21.77 for March, 1926; \$20.96 for March, 1922; \$26.92 for July, 1920 (the post war peak); and \$14.35 for March, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics was fractionally lower at 72 for March as compared with 72.1 the previous month, due mainly to lower prices for hogs, eggs, hides, leather and non-ferrous metals. Comparative figures for previous dates are 64.4 for March, 1933; 91.8 for March, 1930; 101.3 for March, 1926; 98.3 for March, 1922; 164.3 for May, 1920 (the post-war peak); and 64.7 for March, 1914.

The latest statistics available reflecting industrial conditions are given in the table on page 306. The index of the physical volume of business was slightly lower in February than in the previous month, but was 29 per cent higher than in February, 1933, the low point of the depression. Of the principal factors in the index, mineral production, construction, carloadings and exports were lower, after adjustment for seasonal variation, than in January, while manufacturing, electric power output, trade employment and imports were higher. All these factors were substantially higher than in February, 1933. The production of footwear and of automobiles was higher than in the previous month and also higher than for the corresponding period last year. Statistics available for March showed employment at a higher level than in February, while wholesale prices were fractionally lower. Car loadings and railroad earnings were higher both as compared with the previous month and with a year ago.

The time loss due to strikes and lockouts, as well as the number of disputes and the number of workers involved during March showed increases over the figures for February, and also over the figures for any month since 1925. Strikes of lumber workers in Vancouver

Island and coal miners in Nova Scotia accounted for most of the time loss in March and also for nearly one-half of the workers involved, while there were a considerable number of disputes involving relatively small numbers of workers for short periods of time. As compared with March, 1933, the numbers of disputes and workers involved and the time loss incurred show considerable increases. There were in existence during the month thirty-two disputes, involving 7,275 workers, and resulting in a time loss of 91,332 working days, as compared with twenty-three disputes, involving 5,481 workers and resulting in a time loss of 30,808 working days in February. In March, 1933, there were on record twelve disputes, involving 2,030 workers and resulting in a time loss of 15,692 working days. At the end of the month there were on record fourteen disputes, involving approximately 4,181 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected, but which had not been called off by the unions.

**Governor General commends unemployed service plans** Vancouver and elsewhere for the purpose of stimulating private efforts to provide employment were commended by the Earl of

Bessborough, Governor General of Canada, in a public address delivered at Vancouver on March 25. "I rejoice," His Excellency said, "in the knowledge that all over Canada, throughout this long and testing winter, voluntary workers from coast to coast have rallied to the cause with a whole-heartedness that can only be called magnificent. I hope most earnestly that a work so well begun may go on and prosper, with the full co-operation of all who are in a position to help, and that it may be the means of giving new strength and new faith to many who have so nearly lost both. Unemployment is a curse that, even if it were lifted here and now, would make its baleful effects felt for many years to come. It is sad enough to see those who have worked honourably all their lives, suddenly and through no fault of their own, deprived of their livelihood; but it is even sadder and more disheartening to all of us who have faith in the future of this great country to watch the havoc that unemployment is playing with the younger generation; to see young men and young women in the full vigour of their youth, who cannot even begin to find for themselves the sort of work for which they are fitted; to see energy, talent and even genius denied the chance to bear fruit because the soil is barren; and worse still to see

despair and bitterness sapping the strength of those who ought never to have felt the burden of either."

### **Natural Products Marketing Act, 1934**

On March 26 the Hon. Robert Weir, Minister of Agriculture, introduced in the House of Commons an "Act to improve the methods and practices of marketing of natural products in Canada and in export trade, and to make further provision in connection therewith." Under its provisions the Governor in Council may establish a Board, to be known as the Dominion Marketing Board, with the following powers: (a) to regulate the time and place of marketing the regulated product, and to determine the manner of distribution and the quantity and quality or grade of the regulated product that shall be marketed by any person at any time, and to prohibit the marketing of any of the regulated product of any grade or quality; (b) to exempt from any determination or order any person or class of persons engaged in the production or marketing of the regulated product or any class, variety or grade of such product; (c) to compensate any person for loss sustained by exporting, storing or withholding from the market any product pursuant to any determination or order of the Board; (d) to compensate any person in respect of any shipment made pursuant to any determination or order of the Board to a country whose currency is depreciated, in relation to Canadian currency, for loss due to such depreciation; (e) to assist by grant or loan the construction or operation of facilities for preserving, storing, or conditioning the regulated product and to assist research work relating to the marketing of such product; (f) to require any or all persons engaged in the production or marketing of the regulated product to register their names, addresses and occupations with the Board, or to obtain a licence from the Board, and such licence shall be subject to cancellation by the Board for violation of any provision of this Act or regulation made thereunder; (g) to require full information relating to the production and marketing of the natural product from all persons engaged therein and to require periodic returns to be made by such persons, and inspect the books and premises of such persons; (h) to pay the operating and necessary expenses of the Board; (i) to acquire, hold and alienate such real property as in the opinion of the Governor in Council may be necessary for the purposes of the Board; (j) to co-operate with any marketing board or agency established under the law of any province to regulate the marketing of any natural product of such province and to

act conjointly with any such provincial board or agency.

Provision is made for the establishment, subject to the approval of the Governor in Council, of marketing schemes, on the petition of a representative number of persons engaged in the production or marketing of a natural product, provided that the principal market for the product is outside the province of production, or that some part of the product may be exported. When no petition has been received the Minister may propose a marketing scheme for any product where he deems such a product to be injuriously affected by the lack of a local board. The Governor in Council may restrict the importation into Canada of any natural product which enters Canada in competition with a regulated product.

#### **Social Services and the B.N.A. Act.**

In the House of Commons on April 11, the Prime Minister referred to the various social services which may be rendered to the people of a country by its government, with particular reference to provision for the unemployed in Canada. "When you come to deal with the problem of the creation of facilities to meet that situation," Mr. Bennett said, "you are confronted at once with divided jurisdiction. The provinces have exclusive legislative control over the matters mentioned in section 92 of the British North America Act. Unless there is agreement by them all, you will have a situation such as you have to-day with respect to old age pensions.... There is not the slightest doubt in the world that unless there is a rearrangement of the powers of this Parliament and the legislatures of the provinces, in the very nature of things the problem cannot be dealt with.... I hold a very strong opinion as to the necessity of an early revision of the provisions of the British North America Act. I am not unmindful of the fact, and I trust the committee will always keep this in mind, that sometimes there is an inclination on the part of many of us to be intolerant because of the views expressed by those who do not agree with us as to the desirability or necessity of amending that statute. I should like to remind the committee of what I am sure is in its mind always, that the British North America Act represents a compromise, and compromises are always difficult to change without the consent of all those whose interests may be affected. Every member of this committee recognizes that difficulty. I need not go into it at any length, beyond stating that we recognize the difficulty and any steps we may take towards its solution will be taken in such a way as

not to strain the mechanism of our existing machinery. When we have accomplished that we will be enabled to embark upon those improvements in our legislation which the circumstances clearly necessitate.... We have not yet approached the problem of an amendment to the British North America Act. That is in the offing, and I suppose that in the course of human events, and when an indulgent and grateful electorate have honoured us with their support, we may be able to make such changes as may be necessary."

#### **Regulation of trade and industry in Alberta**

A bill is before the Alberta Legislature to establish a bureau of trade and industries, under a director. The proposed bureau would have power to conduct an inquiry at any time into any trade, business or industry where the director believes conditions are detrimental to the industry or to the public, to promote trade conferences and trade associations and establish codes to eliminate unfair competition, and to set fair prices. If 60 per cent of the persons engaged in any one industry agree on a code it will be binding for all members of that trade. If the trade cannot agree, the director and his advisory board are given power to draw up a code. The act would prohibit the sale of any commodity designated at a price less than the invoice cost plus cost of carrying on business. Formation of associations of employees of any trade or industry without interference by employers is provided for, and the director would have power to regulate workers' hours and wages. All industries or trades would be licensed, and penalties up to \$2,000 are provided for infraction of the act, which applies to both wholesale and retail trade. Special provisions are made in the Act for the coal mining industry, including the establishment of a common selling agency, the fixing of limits of production, and promotion of rationalization.

#### **Abuses aimed at by minimum wage legislation**

The Hon. Dr. J. M. Robb, Acting Minister of Labour of Ontario, speaking in the Legislature on March 22 on the operation of the Minimum Wage Act in the Province, stated that the Board was established with the object of correcting unsatisfactory features in the prevailing standards of wages paid to female workers. These "unsatisfactory features" had been outlined in 1928 by Dr. J. W. McMillan, then chairman of the Board, as follows:—

"First there is the shyster employer. He wants to sell his products to the workers in other plants, while these other plants can sell

## MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(Official statistics except where noted)

	1934			1933

(3) Figures for end of previous month.

(4) Figures for four weeks ending March 31, 1934, and corresponding previous periods.

(5) Sugar production given in periods of four weeks ending March 24, February 24 and January 27, 1934; March, February 25 and January 28, 1933.

little or none to his workers. He wants other industries to support him, as other members of the families to which his workers belong carry the burden of their homes. He is a parasite in the industrial organism, and should be compelled to play fair with his neighbours and competitors.

"Second, there is the indifferent employer. He is generally without much capital or business experience. His venture is often short-lived and ends in disaster. His most desperate efforts are directed toward lowering wage cost without assessing the relation between wages and production. There is a constant succession of these employers, for as one goes down another leaps in his place. One happy effect of minimum wage administration often is to improve this man's management of his business so that he has a better chance to succeed.

"Third, there are the wages which are inadvertently low. Especially in the large establishments individuals and groups of workers are often overlooked. It is not the purpose of the Minimum Wage Board to effect any general increase in wages. It is satisfied to heal the condition which both the public and the trades recognize as unhealthy."

It may be noted that the Ontario Minimum Wage Act was amended at the recent session to set the maximum number of working hours to which the minimum wages apply; to provide for overtime payment on a *pro rata* basis; to prevent the displacement of female by male labour at lower wages; and to extend the penalties provided for offences under the Act.

#### **Proposed Economic Council in British Columbia.**

A Bill has been introduced in the British Columbia Legislature by the Hon. George S. Pearson, Minister of Labour, "to provide for the investigation of matters of economic importance and for the creation of an Economic Council." The proposed Act would provide for the establishment in the Department of Labour of an Economic Council, consisting of not more than ten members, to be appointed by the Lieutenant Governor in Council and to hold office during pleasure. The powers, duties and functions of the Council would be as follows:—

(a) To provide for industrial research; to co-ordinate as far as possible all industrial investigation and research; and to collect and disseminate data emanating therefrom;

(b) To acquire and utilize in arts and manufactures the knowledge already existent in other countries;

(c) To carry out an economic survey of the natural resources of the Province, and to furnish advice with regard to the best methods of utilizing such resources;

(d) To furnish advice with regard to the best methods for attacking industrial problems, for inducing industrial improvements and for facilitating and encouraging manufacture in suitable localities;

(e) To co-ordinate various industries so as to obtain the best combined results and the exchange between user and manufacturer of manufacturing improvements and operating experience, and to bring together producer, manufacturer, and purchaser;

(f) To publish technical, scientific, and statistical information, and to encourage technical and industrial study by all possible means;

(g) To inquire and report on and aid in the establishment of any industries in British Columbia where it appears that such industries can profitably be carried on;

(h) To consider and initiate scientific researches in connection with or for the promotion of primary or secondary industries in the Province;

(i) Generally to make investigation of the possibilities of economic and industrial development in the Province of British Columbia with a view to making recommendations as to market extension, industrial expansion, increase of employment, and for any other purpose calculated to promote the economic development of the Province.

By an amendment to the Male Minimum Wage Act a Board of Industrial Relations has been established in British Columbia to administer that act and also to take over the administration of the Female Minimum Wage Act and the Hours of Work Act. The new Board held their first meeting at Victoria early in April, when they reviewed the wage situation in the logging industry, with particular reference to a dispute in the camps in Vancouver Island. The members of the Board are: Helen Gregory MacGill, Christopher John McDonald, and James Thompson.

#### **Death of J. T. Foster of Montreal**

The death occurred on April 2 of John T. Foster, prominent in the International Labour Movement in Canada as a former vice-president of the Trades and Labour Congress. The deceased was in his 60th year, and had a distinguished record of service on behalf of organized labour. For over 23 years he was president of the Montreal Trades and Labour Council, the largest of its kind in Canada. In this capacity his counsel was frequently sought by the Quebec Government on matters pertaining to labour legislation, and several years ago he was appointed a member of the Quebec Social Insurance Commission. The Trades and Labour Congress of Canada not only benefited by his service in an executive capacity as a vice-president for a number of

years, but he was also managing editor of the *Congress Journal*, the official publication of that organization. He was labour's representative on the National Research Council, and on three occasions he was official adviser to the Canadian labour delegate at conferences of the International Labour Organization at Geneva.

#### **Salmon fishermen co-operate in British Columbia**

The Kyuquot Trollers' Co-operative Association, which was recently admitted to the Co-operative Union of Canada, was organized in February, 1931, after a long

period interrupted by strikes and price disputes with private buyers. According to a report published in the *Canadian Co-operator*, March, 1934, the membership in the new Association has increased to 200 fully paid shareholders at \$25 a share, and well equipped stations have been established at Kyuquot, Quatsino, Nootka, Ucluelet and Bamfield, covering the fishing grounds of the west coast of Vancouver Island from Cape Beale to Cape Scott. President E. Larum reports as follows:—"We started chiefly as producers, but shortly after incorporation, on account of the prices charged by the local storekeepers, opened a general store on our Kyuquot and Nootka floats. We are this winter building a modern store and office at Kyuquot. Each of our members owns and operates his own boat and gear, with a value of from \$1,500 to \$3,000. The fishermen deliver their daily catches to the stations of the Association, where they are weighed, iced, and held until transferred to the Association's chartered Diesel fish-packers running on schedule to the markets at Victoria, Vancouver and Seattle, U.S. The fishermen receive at each delivery a statement of the weights, and on return of the packers each received his payment according to market prices. In the three years the Association has operated we have averaged a yearly production of 1,000,000 pounds of spring and coho salmon at an average yearly value of \$150,000, with operating expenses \$40,000 a year, much of which is duty on fish marketed in the United States and selling commission. The co-operative marketing of our fish proved a success right from the start, as well for the producers as the buyers. The fishermen have learnt to take better care of their fish, and have whole-heartedly given the management their support in putting a quality product on the market. Our fish is now known to be of the highest quality, and for that reason brings the highest prices.

The Prince Rupert Fishermen's Co-operative Association also has applied for admission to the Co-operative Union of Canada.

#### **Regulation of lumber camps in Ontario and Quebec.**

The agreement made recently between the Ontario and Quebec Governments to secure uniform labour conditions in the lumbering industry in the

two provinces was noted on page 236 of the last issue, where the provisions of the Quebec Forest Operations Commission Act were reproduced. A corresponding Act was subsequently passed by the Ontario Legislature under the title "The Woodmen's Employment Act, 1934." Its purpose, like that of the Quebec Act, is to provide machinery whereby labour difficulties in lumber camps may be avoided. It provides for the appointment of an inspector, who will be the administrative officer to carry out the Act, and for assistant inspectors. The duties of the Ontario inspector are practically identical with those of the two Quebec Forest Operations Commissioners. These duties are stated in section 4 as follows:—

"It shall be the duty of the inspector to investigate from time to time as may be directed by the Minister or Deputy Minister of the Department of Lands and Forests, the undertaking or operations of any operator or of any person carrying on work under a contract or sub-contract or other arrangement or agreement authorized by or relating back to the licence, permit, contract, agreement or other instrument granted or made by the Crown under which the operator enjoys the right to cut and remove Crown timber, and such investigation shall be made with reference to,—(a) the computation of the wages or earnings of employees, the hours and times of working, and the method of paying such wages or earnings; (b) the sufficient and wholesomeness of food supplied to employees whether such food is supplied as part of the wages or earnings of such employees or is paid for in cash by such employees, or is deducted from the wages or earnings of such employees; (c) the prices charged for meals, living accommodation, clothing, boots, supplies, tools, tobacco and any other article sold to, provided for or offered for sale to employees; (d) the amount charged against, or deducted from the wages or earnings of employees for medical, dental, transportation or other services or facilities of any nature whatsoever; (e) the assessments, levies, fines, penalties or other deductions charged against the wages or earnings of any employee; (f) the rooms, tents, cabins, houses, camps, or other places of accommodation provided for the living or working places of employees and the sanitary conditions thereof, or of any storehouse,

kitchen, dining room or other places used for the preparation, storing and serving of food; (g) the details of any contract, sub-contract, arrangement whether written or otherwise, the carrying out of which involves in any manner the employment of any person; (h) the conditions under which employees labour, the hazards to which employees are subjected in the course of work, and the methods employed in carrying out timbering and lumbering operations; (i) such other matters respecting woodmen's employment as may be directed by the Minister or Deputy Minister of the Department.

Regulations under the Act may be made by Order in Council.

#### **Subsistence homestead movement in U.S.A.**

Recent developments in the subsistence homestead movement in the United States are described in the *Monthly Labour Review* (Washington) for February. Up to the middle of January, federal loans had been authorized for eleven subsistence homestead communities which will provide for nearly 2,500 families, including over 10,000 persons. "A long range program," it is stated, "under which groups of industrial workers and farmers are to be relieved of complete dependence upon either factory work or agriculture is being worked out by the Subsistence Homesteads Division of the United States Department of the Interior through a series of demonstration projects. One phase of the program is to assist in the redistribution of surplus populations, groups left stranded by the shutdown or permanent closing of the industries in which they earned their livelihood, and populations dependent on part-time work. A second phase includes the transfer of farmers marooned on eroded and worn-out lands to good land. To do this it is forming new communities of garden homes which will afford a source of food supply as well as shelter. For the older worker who has small chance of industrial re-establishment such homesteads offer an opportunity to become self-sustaining. For the younger worker a garden home, acquired during his active years in industry, offers the prospect of a place of retirement when the period of maximum earning power has passed. The shorter workday with the resultant increase in leisure hours, the increase of technological unemployment cyclical unemployment, seasonality of employment, the move toward decentralization of industry, are all factors which it is believed make desirable some such movement as that toward subsistence gardening."

The homestead gardens are designed to provide part of the families' maintenance, while part-time employment in local industries to be established is expected to supply the remainder and to provide the cash required for the repayment of the loan. The loans to individual projects range from \$50,000 to \$1,000,000, and in most cases are repayable within a term of twenty years.

#### **Furniture manufacturers' plan for industrial organization.**

At their recent annual convention at Toronto the Furniture Manufacturers' Association of Canada adopted a plan for the organization of the industry, similar in some of its provisions to the "furniture code" for Ontario which was noted in the *LABOUR GAZETTE*, October, 1933, page 974. The Association proposed that the Dominion Parliament should enact legislation to control all furniture manufacturing in Canada "within limits defined by the Government and so designed as to protect the interests of employers, manufacturers and consumers." The plan contained the following provisions: (1) all furniture producers to become members of the association for the purpose of self-government under the suggested legislation; (2) minimum scales of wages for both male and female employees to be established; (3) No manufacturer shall sell furniture below cost, the cost to be defined by codes, except in special instances which would obtain in "clear out" sales of old stock, and then only under special methods provided in the code; (4) all furniture be graded and that it be an offence, subject to penalty, to infringe these grades; (5) all retailers to display prominently the grade tag; failure to do this would be an offence; (6) Any infringement of the code by a manufacturer should be considered an offence, punishable by fine, and the association would be the agent to bring offenders before the courts; (7) investigations of alleged infringements must be undertaken on complaints of employees or manufacturers, or might be undertaken by "properly appointed officials" at any time.

#### **Public works program in New Zealand.**

In his recent financial statement in the New Zealand House of Representatives the Hon. J. G. Coats, Minister of Finance, dealt with the suggestion that public works should be expanded as a means of stimulating industry and relieving unemployment. A large and relatively sudden expansion of public works, he said, would no doubt act as a stimulant; but in view of the great increase in the relative weight of all debt charges

caused by the fall in prices, it was obvious that any such expansion could not be maintained for long, and when the effect of the stimulant had worn off the community would be in a worse position than at present, apart from any improvement resulting from a rise in prices. The proposals made in Great Britain and elsewhere for putting in hand of extensive public works were intended only for creditor nations, the basic idea being that the expansion thus brought about would help to lift prices in markets absorbing primary products and thereby automatically aid debtor countries such as New Zealand. Under present circumstances the Government considered that loan expenditure should be restricted to necessities and works that would indirectly or directly earn sufficient to cover the debt charges involved. At the same time it recognized that with the much reduced construction costs the present was an opportune time to proceed with capital works.

#### **Need for vocational agricultural education.**

In the last annual report of the New Brunswick Vocational Education Board, Mr. R. W. Maxwell, of the Carleton County Vocational School at Woodstock, makes a plea for the provision of vocational education designed to meet the needs of pupils around sixteen years of age who intend to follow agricultural pursuits. He points out that, under the present system of training, "invariably, our brightest farm youths, imbued with the commendable desire to achieve the maximum of education available to them, originally, in many cases, with a view of equipping themselves properly to conduct their farm life and business, and pursuing it to the ultimate end, find themselves engaged in the professions and in the business life of the country. . . . Too long have held sway the practice and belief that the keenest boys should by all means be trained away from the farm. Too often the youth selected or encouraged to remain on the farm has been forced to sacrifice his own educational development to the advancement of the 'bright' member of the family. His education meagre, he has presumably been deemed fitted for farming. For too long have those on the farm pointed with pride, and perhaps with a certain consolation to the great number of leaders in the business and professional life of the country who were raised on the farm. Is it not to our discredit rather than to our credit that we have actually encouraged our best developed minds to quit the farm? Is it not astonishing to observe that we as a people, because of lack of vocational agricultural educational facilities, are found to be actually making a selection of our young

men for farm life based on a standard that cannot but eventually result in a group or class set apart, distinctly inferior in the general attributes that make for successful living?"

#### **An experiment in vocational guidance in Great Britain.**

In a recent address on Science and Industry, Professor Julian Huxley described an experiment recently made in England by the National Institute of Industrial Psychology in providing vocational guidance for boys and girls leaving school. The experiment was carried out by the Institute in conjunction with the education authorities at Birmingham. "Half of a group of children were advised in the ordinary way at the conferences on choice of employment attached to the school; the other half were in addition tested by specially trained workers. The tests concerned manual dexterity, mechanical ability, clerical ability, performance tests with concrete problems, and ordinary intelligence tests. In addition, special temperament charts were constructed for each child, to include estimates of such qualities as initiative, perseverance and so on. The type of jobs recommended varied from clerical posts to routine factory work, from page-boy to skilled apprentice. The results, as checked by a follow-up investigation, were pretty conclusive. The children who had been specially tested and had followed the tester's advice proved to have been much the most satisfactorily placed, as judged by the length of time the first job was held, by the proportion who continued in the same job throughout the period, by the opinion of the employers, and by the opinion of the children themselves. The tested children who took jobs against the tester's advice were the least satisfactorily placed, with the untested children intermediate. It is interesting to find that unsatisfactory results arise not only from round pegs in square holes—such as workers in clerical posts whose real gift is manual dexterity; not only from small pegs in big holes—children taking on jobs beyond their real powers; but also from big pegs in small holes—workers who get discontented because their job doesn't give scope for their abilities or their initiative."

#### **Manitoba employers and unemployment insurance.**

Mr. Robert H. Hamlin, president of the Employers' Association of Manitoba, submitted to the Right Hon. Sir Arthur Steel-Maitland, former Minister of Labour of Great Britain, on the occasion of his recent visit to Canada, a memorandum prepared last year by the Association on the subject of unemployment insurance asking his

opinion of the views it expressed. The memorandum opposed unemployment insurance on the grounds that it (1) would not solve the unemployment problem; (2) would increase unemployment; (3) would undermine the moral fibre of the workers; (4) would place a staggering financial burden upon industry, which would in turn cause unemployment; (5) would cause a financial drain on the public treasury.

Mr. Hamlin reported that "Sir Arthur suggested that a careful and fair-minded investigation should be made of the insurance system as it exists in Great Britain to-day before we definitely decided to oppose the introduction of unemployment insurance on the above-mentioned grounds. One would judge that he was of the opinion that our criticism based on what happened in Great Britain would have been justified in 1930 and 1931, but, under the Act as it now stands and is administered in Great Britain at the present time, we would not be justified in opposing it, and that the many abuses of the system two or three years ago have since been overcome. He distinguishes the dole from unemployment insurance and says that it has now been brought under control, with the result that the relief given in Great Britain is probably given more economically than under the various extemporized forms of relief in other countries.\*

In a paper read before the Association at its annual meeting at Winnipeg in February, Mr. C. C. Ferguson, general manager of the Great West Life Assurance Company, submitted a "broad plan" for unemployment insurance containing the following features:— (a) Contributions in the form of a wage tax of a small uniform percentage payable by all earners of income; (b) The proceeds of the tax to be kept in a special fund to be used for no purpose other than to pay insurance benefits; (c) Any citizen who cannot find employment, or whose employment does not provide him and his family with enough to live upon, to be entitled to benefits; (d) There would be quite severe regulations as to the amount of benefits payable, waiting periods, continuity of benefits, etc.

#### Aims and accomplishments of the I.L.O.

✂ The origin and accomplishments of the International Labour Organization were described in an article in a recent issue of *Saturday Night* (Toronto) by Mr. Paul Rives, formerly of the secretariat of the Organization, and member of the French Chamber of Deputies. "The principles behind the International La-

bour Organization," he points out, "were laid down by the preamble in the Versailles Treaty which reads as follows:—

"Whereas the League of Nations has for its object the establishment of universal peace, and such a peace can be established only if it is based upon social justice; and whereas conditions of labour exist involving such injustice, hardship and privations to such large numbers of people as to produce unrest so great that the peace and harmony of the world are imperilled and an improvement of those conditions is urgently required; as, for example, by the regulation of the hours of work, including the establishment of a maximum working day and week, the regulation of the labour supply, the provision of an adequate living wage, the protection of the worker against sickness, disease and injury arising out of his employment, the protection of children, young persons and women, provision for old age and injury, protection of the interests of the workers when employed in countries other than their own, recognition of the principle of freedom of association, the organization of vocational and technical education and other measures; whereas also the failure of any nation to adopt humane conditions of labour is an obstacle in the way of other nations which desire to improve the conditions in their own countries. . ."

"Herein," Mr. Rives continues, "is the whole of the I.L.O. program, which the staff of the office attempts to put into effect by technical and diplomatic means. There are 500 ratifications to the 40 international conventions which have been drafted in Geneva in the course of a dozen years. These cover such matters as the work of women, children, sailors and dockers; the eight-hour day; control of native labour in the colonies. These questions were studied somewhat at random according to the preparedness of international public opinion. As in so many other questions, actuality plays its important part. . .

"The I.L.O. has brought back human labour to its dignity of place and its former economic importance at a time when at any cost consumption must be adjusted to production. The Labour Office has laid the foundation of a new social order in which the worker becomes a man in every sense of the word."

#### Proposed strengthening of National Labour Board in U.S.A.

A bill has been introduced in the United States Senate by Senator Robert F. Wagner, which would constitute the National Labour Board, established last August, as an independent body, with powers to investigate all labour disputes.

\*The amending British Act was outlined in the LABOUR GAZETTE, December, 1933, page 1170.

The original functions of the Board were described in the *LABOUR GAZETTE*, September, 1934, page 874. The first step in the development of the Board after its formation under the chairmanship of Senator Wagner was to include in its functions the handling of problems arising under the collective bargaining sections of the National Recovery Act. An article in *Business Week*, March 10, 1934, states that the Board has settled a number of strikes and incipient strikes, and its present record is 2,012 cases, involving 1,061,000 employees handled and 88 per cent settled. It has grown by various executive orders, the last one providing that when any employer has failed to comply with the board's decisions the matter may be turned over forthwith to the Federal Trade Commission or the Attorney-General or to the Compliance Board of NRA for action.

The Wagner Bill, as introduced, is designed to remove all obstacles to labour organization, to give labour equal power with industry in bargaining over labour problems; it provides that employees, in their discussions with employers, shall have the right to hire independent experts (meaning union agents), that the word "employee" shall include those who have left due to strikes or lockouts resulting from the question at issue, but not the men who have succeeded them, and lists as "unfair labour practice" interference by employers with labour organizations, refusal to deal with representatives of employees, and aiding in forming or financing company unions. The National Labour Board is given official status in Title II of the bill, with 7 members, 3 from the general public paid \$10,000 a year, 2 from industry and 2 from labour paid on a \$25 *per diem* basis. The board may prevent any infringement of the bill's provisions, act on information from any source, and carry cases to the federal courts, where the facts established by evidence brought out by the Board investigations shall be undisputed. Prior to taking the matters to court, however, the Board may issue injunction orders, require damages, reinstatement of employees, etc., and books may be called for in the course of the investigations made. A third title of the bill sets up a United States Conciliation Bureau in the Department of Labour to handle mediation problems when invited to do so.

Senator Wagner states that his bill is the result of what he regards as the unjustified growth of company unions in American industry. These, he says, increased 189 per cent in 1933, having 1,164,000 members as against 432,000 in 1932. He adds that 69 per cent of the "employer-dominated unions" have been inaugurated since the passage of The National Recovery Act.

In April, 1932, basic alterations were effected in the New Zealand system of industrial arbitration and conciliation. The compulsory basis of the law was changed into one of an optional nature. Previous to the amending law of 1932, the Court of Arbitration had jurisdiction to make binding awards in case of industrial disputes not settled by agreement. Under the amending law of 1932, the jurisdiction of the Court can only be exercised with the consent of both parties to the disputes, except in disputes relating to female workers.

The Workmen's Compensation Boards of Ontario and Quebec recently considered the question whether shippers are liable for the Workmen's Compensation assessments payable by the trucking concerns employed by them, and held that the law when strictly interpreted, gives them power to hold shippers so liable. Hitherto this ruling has not been enforced, but it is recommended that shippers would be well advised to secure from any trucking concern employed by them a certificate showing that such a concern has paid its compensation assessments.

The Mexican Government's economic policy for 1934, as announced recently by the President, aims at the regulation of production in accordance with demand, higher and more uniform wages for skilled workers, more active commerce, standardized prices and increased consumption. New industrial undertakings are to be limited by a system of state authorization. The federal government is to co-operate with local governments in a general road building program, and will complete various works of public utility.

The Australian Commonwealth Court of Conciliation and Arbitration, on November 27, 1933, awarded extra rates of pay for waterside workers engaged in the loading of wheat. Judge Beeby said he had no hesitation in concluding that the nature of the work involved in bulk handling called for a substantial extra rate. Trimming bulk wheat in ships' holds, he said, if not definitely injurious to health, was accompanied by extreme discomfort. The prevalence of dust made the use of respirators necessary. The wearing of respirators in holds which at certain stages of loading were without ventilation was irksome and exhausting. The medical reports available were sufficient to support the claim that wheat trimming in holds was accompanied by unusual discomforts if not risks. The extent of the risks should, in his opinion, be further investigated by a committee of experts or by the Commonwealth Health Bureau.

## RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

A BOARD of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act was established by the Minister of Labour on March 20 to deal with a dispute between various firms, members of the Shipping Federation of British Columbia, Limited, and certain of their employees being members of the Vancouver and District Waterfront Workers' Association. The application in this matter was received from the employers. The dispute arose in connection with negotiations looking to a new working agreement, the points at issue involving wages and working conditions. Approximately 940 employees were stated to be directly affected by the dispute. The personnel of the Board is as follows: The Honourable Mr. Justice Harold B. Robertson, of Victoria, B.C., chairman, appointed by the Minister in the absence of a joint recommendation from the other Board members, Messrs. J. E. Hall and Charles McGregor Stewart, both of Vancouver, nominated by the employers and men, respectively.

An application for the establishment of a Board of Conciliation and Investigation was received in the Department of Labour on March 30 from employees of the Toronto Transportation Commissioners, being members of the Toronto Railway Employees' Union. A decrease in wage rates proposed by the employers was stated to be the cause of the dispute, approximately 2,000 employees being directly affected and 1,000 indirectly affected. The agreement under which the men had been working expired on March 31, on which date an assurance was given the union by the Toronto Transportation Commission that the same wage rates and conditions would be continued until the difficulties had been settled by a Conciliation Board or some other regularly constituted authority, or by negotiations. A Board of Conciliation and Investigation had not been yet established at the time of going to press, it being understood that direct negotiations were still in progress.

## CONCILIATION WORK OF THE DEPARTMENT OF LABOUR FROM DECEMBER 1, 1933, TO MARCH 31, 1934

CONCILIATION proceedings are carried on for the most part under the provisions of the Conciliation and Labour Act, which empowers the Minister to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or an arbitrator when requested by the parties concerned. In some disputes occurring in industries coming directly under the Industrial Disputes Investigation Act, namely, mines and public utilities, preliminary inquiries and mediation by officers of the Department result in the settlement of the matters in dispute without the necessity of the establishment of Boards of Conciliation and Investigation.

The Department of Labour has on its staff conciliators and mediators who are stationed at Vancouver, Toronto, Ottawa, and Montreal. The territory of the officer resident in Vancouver comprises the four western provinces. The conciliation officer resident in Toronto confines his activities to Ontario, while the officer in Montreal covers the province of Quebec and the Maritime Provinces. The headquarters of the Chief Conciliation officer are at Ottawa.

These officers are also charged with certain duties arising out of the administration of the Fair Wages Policy applying to contracts let by the Dominion Government and to works aided by federal funds.

The following statement covers the more important conciliation matters dealt with during the period from December 1, 1933, to March 31, 1934 (An article covering the period from April 1, 1933, to November 30, 1933, appeared in the LABOUR GAZETTE, December, 1933, page 1157).

*Milk Drivers, Vancouver, B.C.*—At the end of September, 1933, employees of the Associated Dairies, Limited, Vancouver, B.C., members of Local Union No. 189, International Brotherhood of Teamsters, Chauffeurs, Stablemen and Helpers, submitted to the employing company an amended agreement providing for certain advantages not covered in the existing agreement which would expire on November 1, 1933. Negotiations were carried on over a lengthy period, and toward the end of December it was agreed that the former agreement would be renewed for a period of twelve months from November 1. An officer of the Federal Department of Labour, in the capacity of mediator, assisted in this settlement.

*Lumber Workers, Kapuskasing, Ont.*—During the latter part of December, 1933, information reached the Department of Labour that there was likelihood of the wood cutters employed by the Spruce Falls Power and Paper Company, Kapuskasing, Ont., going on strike. An officer of the Department proceeded to Kapuskasing, visited certain of the camps and conferred with officers of the camp committee and company officials. It was found that the wood cutters were quite prepared to abide by the agreement entered into in November last. The company, however, voluntarily made certain concessions of considerable value to the cutters receiving low earnings.

*Commercial Telegraphers, etc., Canadian National and Canadian Pacific Systems.*—Direct negotiations between the interested parties having failed to solve a dispute relating to a further 5 per cent reduction in wages proposed by the Canadian Pacific and Canadian National Telegraphs, applications for the establishment of Boards of Conciliation and Investigation were received in the Department from both Companies on December 30, 1933. In the case of the Canadian Pacific Telegraph Company the application covered telegraphers and clerks; two applications were received from the Canadian National Telegraphs, one covering climbers, groundmen and cooks, and the other covering telegraphers, clerks and installers, all being members of the Commercial Telegraphers' Union of North America. It was stated that 2,325 employees were directly affected. Subsequently a referendum vote was taken by the employees which resulted in their refusal to accept the further reduction proposed by the employing Companies. At the invitation of the Department of Labour a joint conference of the interested parties was held in the office of the Department on February 2, at which were present officials of the two Telegraph Companies, representatives of the employees, and officers of the Department of Labour. A basis of settlement was reached which provided for a further 5 per cent reduction in the wages of the higher paid employees, but important modifications were made in the case of the lower paid men, and certain other concessions were granted. This arrangement has now been covered by signed agreements and the Board applications have been withdrawn.

*Waterfront Workers, Vancouver, B.C.*—For the past several months negotiations have been taking place between committees representing the Vancouver and District Waterfront Workers' Association and the Shipping Federation of British Columbia respecting wages and

working conditions. An officer of the Department of Labour who had been in touch with the interested parties during this period advised them that, should direct negotiations fail to solve the dispute, application should be made for the establishment of a Board of Conciliation and Investigation. A Board has now been established on the application of the Shipping Federation which reached the Department on March 14, 1934.

*Coal Miners, Coal Valley, Alta.*—The employees of the Coal Valley Mining Company, Limited, members of Local Union No. 46 of the International Union of Operating Engineers, and the Steam Shovel Auxiliary Local, went on strike on the morning of February 16, 1934, due to a disagreement with the management respecting wages and working conditions. In advising the Department of Labour of the situation the union representative requested the assistance of the Department of Labour. The Department replied by telegraph urging that the men should return to work at once, thereby affording a proper opportunity for conciliation. This request was immediately complied with and a telegraphic request was received for the establishment of a Board of Conciliation and Investigation. A conciliation officer was instructed to deal with this dispute and as a result a prompt settlement was reached, covered by a signed agreement, thus avoiding the necessity of Board procedure.

*Coal Miners, Sterco, Alta.*—The Department of Labour was informed on February 19, 1934, that a dispute respecting wages and working conditions existed between the management of the Sterling Collieries, Sterco, Alta., and its employees, members of Local Union No. 46, International Union of Operating Engineers and Steam Shovel Auxiliary Local. A conciliation officer proceeded to Sterco and a prompt settlement was reached and embodied in a signed agreement.

*Coal Miners, Nacmine, Alta.*—Early in March a conciliation officer of the Department of Labour visited Nacmine, Alta., and discussed with officials of the Thomas Coal Company, Limited, and officials of the United Mine Workers of America, certain matters in dispute, particularly the preference of employment clause as it related to long wall work. It was finally decided that this matter should be settled by arbitration and the representatives of the interested parties agreed upon Mr. L. Stevens, mining engineer of Edmonton, as arbitrator.

## PROVINCIAL INVESTIGATION INTO WAGE DISPUTE AFFECTING COAL MINERS AT STELLARTON, N.S.

THE Government of the Province of Nova Scotia has issued the report of Mr. Thomas Graham, mining engineer of British Columbia, appointed by the Honourable Michael Dwyer, Minister of Mines for Nova Scotia, on December 29, 1933, to make an investigation into a wage dispute between the receiver-liquidators of the Acadia Coal Company, Stellarton, N.S., and their employees represented by the United Mine Workers of America. The report was considered by members of the government, the receiver-liquidators and representatives of the coal miners on February 13. The investigator reported that wage reductions were necessary for the continuation of operations, and as the miners refused to accept the wage reductions, averaging twenty per cent, which the management put into effect on February 28, the miners ceased work (LABOUR GAZETTE, March, 1934, page 225).

The Acadia Coal Company, like other coal mining companies, subsidiaries of the Dominion Steel and Coal Corporation, was operated under the terms of an agreement with the United Mine Workers of America, District 26 (The clauses of the agreements' datal wage scales for the period March 15, 1932, to January 31, 1933, continued for another year, were given in the LABOUR GAZETTE for August, 1932, pages 913-921). In the meantime, two of the coal mining subsidiaries, the Nova Scotia Steel and Coal Company, Sydney Mines, and the Acadia Coal Company, Stellarton, went into the hands of receiver-liquidators. In April, 1933, the latter proposed wage reductions at Sydney Mines averaging twenty-five per cent, and the mines were closed pending negotiations for a settlement, which was reached June 20 as a result of conciliation by the provincial government, the reductions agreed upon being between ten per cent and twenty-five per cent for various classes (LABOUR GAZETTE, February, 1934, page 130, footnote). In the autumn the receiver-liquidators made a similar proposal for the Acadia Coal Company's mines at Stellarton and operations were suspended from November 1 to December 26. Work was then resumed under an arrangement that the provincial government would provide for financing the mining operations on the previous wage scale until an investigation had been made into the operation of the mines, including management and sales. In his examination of the mines and study of methods of operation, Mr. Graham was accompanied by officials of the company and representative of the miners.

The investigator reported that a loss of

\$200,000 had been experienced in the first ten months of 1933 and that the reduced wage scale proposed was graded to give favourable consideration to the low wage earner but averaged 17·8 per cent. The report deals in detail with the coal deposits mined by the company, outlining the difficulties of operations through gaseous conditions, the nature of the seams, and losses through fires and explosions. The methods of operation and the plans of the management for development were strongly commended but some of these required considerable expenditure for which capital was not available.

"The United Mine Workers presented a brief pointing out certain changes in plant equipment and mining methods which they deemed would do much to reduce the cost of production. Some of these were based more on general inference than on fact, others were well taken, but mostly were such as called for expenditure of money in new equipment and plant, or in extensive changes in the system now in use, and hence were not improvements capable of being made with the plant on hand, as per my initial reference. Generally the men observed at work in and around the mines impressed me as being capable and efficient in their calling."

The sale of the coal through the central sales organization of the Dominion Steel and Coal Corporation was approved, as having reduced the cost of sales for the constituent units, it being found also that there was no just basis for statements that the Dominion Coal Company were manipulating the sales to their own advantage and to the detriment of the smaller units, as this company had suffered a greater diminution than any of the other units during the period of declining markets; that no member of the merger had fared any better than the Acadia Coal Company, and that its sales had never fallen below its basic proportion except during the latter part of 1929 and early in 1930, following an explosion in one of its mines. Regarding possibilities for the future, having regard to the markets for coal, it was found that while the Acadia mines had a capacity for 500,000 tons per annum there was no prospect for sales of much over 200,000 tons and that on operations on this basis, at the reduced wage scale proposed, there would be a loss of 36·5 cents per ton, with no provision for depreciation, depletion or interest on capital. A proposal to close down two of the mines, operating the third, which could supply all the coal for which sales

were to be anticipated, would result in a surplus of only 19.7 cents per ton.

No settlement of the dispute having been reached as a result of conferences between members of the provincial government, the representatives of the miners, and the receiver-liquidators, the government was requested by

the miners to finance further the operations at the previous wage scale, but indicated its inability to do so. The receiver-liquidators applied to the Supreme Court of Nova Scotia for authority to abandon two of the three mines but it was reported in the press at the end of March that this had been refused.

## STRIKES AND LOCKOUTS IN CANADA DURING MARCH, 1934

THE following table shows the number of disputes, workers involved and time loss for March, 1934, as compared with the previous month and the same month a year ago:—

Date	Number of disputes	Number of employees involved	Time loss in working days
*Mar., 1934..	32	7,275	91,332
*Feb., 1934..	23	5,481	30,808
Mar., 1933..	12	2,030	15,692

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time is frequently not received until some time after its commencement.

The number of strikes and lockouts during March, as well as the numbers of workers involved and the time loss, showed an increase over the figures for February. Half of the increase in the number of workers involved was due to the extension of the strike of lumber workers on Vancouver Island to more of the camps. A number of strikes involving relatively small numbers of workers accounted for the balance of the increase in the number of employees involved. A strike of coal miners in Nova Scotia, beginning on the last day of February, with the lumber workers' strike in Vancouver Island accounted for most of the time loss for the month. As compared with March, 1933, there were considerable increases in all the figures, although at that time three strikes of clothing and textile

workers involved about 1,300 employees and caused 8,600 days' time loss.

Ten disputes, involving 2,977 workers, were carried over from February, but two of these, involving bakery employees in Winnipeg, Man., commencing February 15, 1934, and moulders, Peterborough, Ont., commencing February 27, 1934, were not reported in time for inclusion in the March issue of the LABOUR GAZETTE. Twenty-two disputes commenced during March. Of these thirty-two disputes, eighteen terminated during the month, eleven in favour of the workers involved, four in favour of the employers concerned, compromise settlements being reached in two cases, while the result of one dispute is recorded as indefinite. At the end of March, therefore, there were fourteen disputes in progress recorded as strikes or lockouts, namely: loggers, Vancouver Island, B.C.; coal miners, Stellarton, N.S.; two disputes of shoe factory workers, Toronto, Ont.; furniture factory workers, Kitchener, Ont.; moulders, Peterborough, Ont.; abattoir and meat packing workers, Winnipeg, Man.; two disputes of shoe factory workers at Kitchener, Ont.; women's clothing factory workers (cloakmakers), Toronto, Ont.; compositors, London, Ont.; plumbers, Saskatoon, Sask.; automobile washers, Toronto, Ont.; and restaurant employees, Toronto, Ont.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information had been received indicating that employment conditions are no longer affected, but which the unions concerned have not declared terminated. Information is available as to three such disputes, namely: photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; and lithographers, Toronto, Ont., April 15, 1932, one employer. The dispute involving compositors employed by one firm in Winnipeg, Man., commenced March 13, 1933, and carried in the above list for some months, was called off by the union on February 12,

1934, and has consequently been removed from the list.

A one-day strike of ninety employees in a boot and shoe factory in Toronto on February 27, the workers securing higher piece rates, was reported too late for inclusion in the March issue of the *LABOUR GAZETTE*.

Information has been received as to strikes in two dress manufacturing establishments in Toronto; apparently occurring in February, resulting from alleged violation by the employers of the terms of settlement of the strike of members of the Industrial Union of Needle Trades Workers terminated January 22. Full particulars have not been received but it is reported that twenty-nine employees were involved in one case and seven in the other and that at the end of March settlements had not been reached. A similar strike involving ten workers in a knitting mill in Toronto toward the end of March has also been reported but particulars have not yet been received.

Disputes involving men on unemployment relief work, who are not paid wages but receive subsistence for which work is performed or may be required are not included in the record, no relation of employer and employee being involved.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

**LOGGERS, ETC., VANCOUVER ISLAND, B.C.**—The dispute involving lumber workers in various camps, beginning in one on the Campbell River on January 27 affecting 400 employees, involved 1,200 to 1,300 employees by the end of February and continued to spread during March, involving about one thousand additional men. In some camps the workers struck in sympathy with others, not having any grievance themselves. A number of the camps were reported to be in operation to some extent but picketed by the strikers, and sawmills were working on logs imported. The Deputy Minister of Labour for British Columbia continued to attempt to arrange for negotiations for a settlement.

**COAL MINERS, STELLARTON, N.S.**—The dispute involving employees of one company from February 28, resulting from a wage reduction of about twenty per cent, remained unterminated at the end of the month. The report of the investigator, appointed by the Government of Nova Scotia, to inquire into the dispute, is reviewed elsewhere in this issue. As the mines had been operated only two or three days per week for some time, the time loss in working days is estimated on that basis.

**BAKERY EMPLOYEES, WINNIPEG, MAN.**—This dispute, commencing February 2, was reported too late for inclusion in the March issue of the *LABOUR GAZETTE*. It is reported that the new proprietor of the establishment refused to employ the employees of the previous owner and attempted to lower wages and increase hours. A settlement was reached and work was resumed on March 16, on the terms of the agreement prior to the dispute (*LABOUR GAZETTE*, October, 1933) also securing recognition of the shop committee and the re-instatement of the former employees.

**BOY'S CLOTHING FACTORY WORKERS, TORONTO, ONT.**—This strike, declared by the Amalgamated Clothing Workers of America on November 3, 1933, to secure union wages and working conditions, was terminated on March 6, by an agreement between the employer and the National Clothing Workers of Canada, affiliated with the All Canadian Congress of Labour, summarized elsewhere in this issue. A number of the employees had not ceased work and the strikers were replaced from time to time. These employees were organized in the other union and reached an agreement with the employer. The Amalgamated Clothing Workers of America, however, continued to picket the premises.

**KNITTING FACTORY WORKERS WINNIPEG, MAN.**—Commencing on January 23, to secure the reinstatement of two workers discharged for cause, this dispute was terminated on March 22 following a conference at which it was arranged that the strikers would be re-employed as required. Prior to the resumption of work one arrest was made in connection with picketing the establishment, the offender, charged with disorderly conduct, being remanded for trial.

**SHINGLE WEAVERS, PORT MOODY, B.C.**—Some of the strikers having resumed work and nearly all of the others having secured employment elsewhere by the end of March, this dispute is recorded as terminated.

**FURNITURE FACTORY WORKERS, KITCHENER, ONT.**—This dispute, involving employees in two factories under the same management, commencing February 16 following an alleged violation of the agreement, was unterminated at the end of March but early in April a settlement was reported, concessions being made by the employer.

**MOULDERS, PETERBOROUGH, ONT.**—Information as to the commencement of this dispute on February 27, 1934, was received too late for inclusion in the March issue of the *LABOUR GAZETTE*. Reductions in piece rates of wages were accepted by the employees but they

## STRIKES AND LOCKOUTS IN CANADA DURING MARCH, 1934\*

Industry occupation and locality	Number of employees involved	Time loss in working days	Remarks
<b>(a) Strikes and Lockouts in progress prior to March, 1934</b>			
LOGGING— Loggers, etc., Vancouver Island, B.C.....	2,300	59,000	Commenced Jan. 27, 1934; for increased wages and recognition of union; unternminated.
MINING, NON-FERROUS SMELTING AND QUARRYING— Coal miners, Stellarton, N.S....	1,300	15,000	Commenced Feb. 28, 1934; against reduction in wages; unternminated.
MANUFACTURING— <i>Vegetable Foods</i> — Bakery employees, Winnipeg, Man.....	7	105	Alleged lockout; commenced Feb. 15, 1934; of employees of previous proprietor; terminated Mar. 17, 1934; in favour of workers.
<i>Boots and Shoes (Leather)</i> — Shoe factory workers, Toronto Ont.....	10	260	Commenced Feb. 27, 1934; for increase in wages and improved working conditions; unternminated.
<i>Textiles, Clothing, etc.</i> — Boys' clothing factory workers Toronto, Ont.....	134	800	Commenced Nov. 3, 1933; for recognition of union and increased wages; terminated Mar. 6, 1934; in favour of employer.
Knitting factory workers, Winnipeg, Man.....	27	513	Commenced Jan. 23, 1934; against discharge of workers; terminated Mar. 22, 1934; in favour of employer.
<i>Other Wood Products</i> — Shingle weavers, etc., Port Moody, B.C.....	20	200	Commenced Jan. 2, 1934; against lower wages; lapsed by Mar. 31, 1934; in favour of employer.
Furniture factory workers, Kitchener, Ont.....	160	3,000	Commenced Feb. 16, 1934; alleged violation of agreement; unternminated.
<i>Metal Products</i> — Moulders, Peterborough, Ont..	11	286	Commenced Feb. 27, 1934; against increase in amount of work required; unternminated.
<i>Miscellaneous</i> — Broom and brush factory workers, Vancouver, B.C....	8	168	Commenced Jan. 27, 1934; for increased wages and reduced hours; terminated Mar. 24, 1934; compromise.
<b>(b) Strikes and Lockouts Commencing during March, 1934</b>			
LOGGING— Loggers, Crescent Inlet, Queen Charlotte Islands, B.C.....	23	115	Commenced Mar. 19, 1934; for increased wages; terminated Mar. 23, 1934; in favour of workers.
MANUFACTURING— <i>Animal Foods</i> — Abattoir and meat packing workers, Calgary, Alta.....	40	360	Commenced Mar. 3, 1934; against discharge of workers and for increased wages and improved conditions; terminated Mar. 13, 1934; in favour of employer.
Abattoir and meat packing workers, Winnipeg, Man....	40	880	Commenced Mar. 7, 1934; for increased wages, reduced hours, improved conditions, and recognition of union and shop committees; unternminated.
<i>Boots and Shoes (Leather)</i> — Shoe factory workers, Toronto, Ont.....	70	560	Commenced Mar. 2, 1934; for increase in wages and recognition of union; terminated Mar. 10, 1934; in favour of workers.
Shoe factory workers, Toron- to, Ont.....	20	440	Commenced Mar. 6, 1934; for recognition of union and increase in wages; unternminated.

## STRIKES AND LOCKOUTS IN CANADA DURING MARCH, 1934\*

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
<b>(b) Strikes and Lockouts Commencing during March, 1934—Concluded</b>			
Shoe factory workers, Kitchener, Ont.....	29	145	Commenced Mar. 26, 1934; against discharge of workers, for increased wages and recognition of union and shop committees; untermi- nated.
Shoe factory workers, Kitchener, Ont.....	32	64	Commenced Mar. 30, 1934; for employment of union members only; untermi- nated.
<i>Textiles, Clothing, etc.—</i>			
Women's clothing factory workers (Dress Cutters), Montreal, P.Q.....	150	600	Commenced Mar. 6, 1934; for increase in wages and reduction in hours; terminated Mar. 10, 1934; in favour of workers.
Cap factory workers, Montreal, P.Q.....	130	130	Commenced Mar. 15, 1934; for increase in wages and improved working conditions; terminated Mar. 15, 1934; in favour of workers.
Millinery workers, Montreal, P.Q.....	1,500	3,000	Commenced Mar. 17, 1934; for increase in wages, improved working conditions and recognition of union; terminated Mar. 19, 1934; in favour of workers.
Millinery workers, Toronto, Ont.....	400	800	Commenced Mar. 23, 1934; for increase in wages, reduction in hours and union shop; terminated Mar. 24, 1934; in favour of workers.
Women's clothing factory workers (Cloakmakers), Toronto, Ont.....	120	500	Commenced Mar. 22, 1934; for union wages and working conditions; untermi- nated.
<i>Printing and Publishing—</i>			
Compositors, London, Ont.....	84	2,000	Commenced Mar. 1, 1934; for renewal of union agreement; untermi- nated.
<i>Other Wood Products—</i>			
Furniture factory workers, Toronto, Ont.....	10	10	Commenced Mar. 17, 1934; for recognition of union, increase in wages and reduction in hours; terminated Mar. 17, 1934; in favour of workers.
<i>Metal Products—</i>			
Foundry workers (automobile parts), Windsor, Ont.....	250	625	Commenced Mar. 26, 1934; for recognition of union, increase in wages and reduction in hours; terminated Mar. 28, 1934; compromise.
<i>Non-Metallic Minerals, Etc.—</i>			
Glass factory workers (blowers), Wallaceburg, Ont.....	75	35	Commenced Mar. 26, 1934; re wages; terminated Mar. 26, 1934; indefinite.
<b>CONSTRUCTION—</b>			
<i>Buildings and Structures—</i>			
Plumbers, Saskatoon, Sask....	6	156	Commenced Mar. 1, 1934; against reduction in wages; untermi- nated.
Painters, Toronto, Ont.....	175	600	Commenced Mar. 5, 1934; for increase in wages, reduction in hours and union agreement; terminated Mar. 8, 1934; in favour of workers.
<b>TRANSPORTATION—</b>			
<i>Water—</i>			
Longshoremen, Digby, N.S....	45	23	Commenced Mar. 15, 1934; for increase in wages; terminated Mar. 15, 1934; in favour of workers.
<b>SERVICE—</b>			
<i>Custom and Repair—</i>			
Cleaners and dyers, Toronto, Ont.....	30	60	Commenced Mar. 16, 1934; for increased wages, reduced hours and recognition of union; terminated Mar. 17, 1934; in favour of workers.
Automobile washers, Toronto, Ont.....	39	117	Commenced Mar. 29, 1934; for increase in wages; untermi- nated.
<i>Business and Personal—</i>			
Restaurant employees, Toronto, Ont.....	30	780	Commenced Mar. 1, 1934; for increase in wages, reduction in hours and recognition of union; untermi- nated.

\*In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which working time was lost to an appreciable extent.

stated it was impossible to increase the output per day as demanded by the employer, and eleven moulders were dismissed. At the end of the month the dispute was reported to be unterminated.

**BROOM AND BRUSH FACTORY WORKERS, VANCOUVER, B.C.**—Commencing February 27, and involving eight men who demanded an increase in wages from \$9 per week to \$13 and reduced hours, this dispute was terminated on March 24 when wages increases of about ten per cent were granted.

**LOGGERS, CRESCENT INLET, QUEEN CHARLOTTE ISLANDS, B.C.**—Loggers, numbering 80, employed by one firm were involved in this dispute from March 19 to March 23, when twenty-three members of the Lumber Workers' Industrial Union ceased work demanding a ten per cent increase in wage rates, and left the camp. Work was resumed in five days when their demand was conceded. The agreement is summarized elsewhere in this issue.

**ABATTOIR AND MEAT PACKING WORKERS, CALGARY, ALTA.**—A dispute involving a number of employees in one establishment resulted in a cessation of work on March 3, several being dismissed for union activities and demanding increases in wages. The Food Workers' Industrial Union reported that forty employees were involved. The employer stated that on March 5 a committee, not representative of the employees, demanded increases which were refused and operation of the plant was continued, those dismissed being replaced. The plant was picketed until March 9. On March 13 the strike was declared off by the union. On March 22 the company announced a ten per cent increase in wages effective from March 19, similar increases being made by a number of other packing plants throughout Canada.

**ABATTOIR & MEAT PACKING WORKERS, WINNIPEG, MAN.**—Some forty of the one hundred workers employed in one meat packing plant in Winnipeg, Man., ceased work on March 7. The strikers, members of the Food Workers' Industrial Union, demanded increased wages, reduced hours, improved conditions, recognition of union and the establishment of shop committees, but at the end of the month it was reported no settlement had been reached. Several arrests were made on charges of assault in connection with picketing, a number being convicted and fined or imprisoned.

**SHOE FACTORY WORKERS, TORONTO, ONT.**—Employees in one establishment ceased work on March 2 and demanded twenty-five per cent increases in wages, with recognition of the Shoe and Leather Workers' Industrial Union. It is reported that work was resumed

on March 10, the strikers' demands being conceded.

On March 6, employees in another shoe factory ceased work making similar demands, but at the end of the month this dispute had not been reported terminated.

**SHOE FACTORY WORKERS, KITCHENER, ONT.**—One shoe manufacturing establishment in Kitchener, Ont., became involved in this dispute on March 26, when twenty-nine of their employees ceased work demanding increases in wages of from thirty per cent to fifty per cent with a twenty-five per cent increase in overtime rates, establishment of shop committees, recognition of the Shoe Workers' Industrial Union and the reinstatement of five workers discharged for refusal to work overtime without increase in wages. At the end of the month no termination had been reported.

In another factory in Kitchener a number of the employees ceased work on March 30 demanding a closed union shop. The factory continued to operate and some of the strikers were replaced and work was resumed by some of the others in four days, without securing their demands.

**WOMEN'S CLOTHING FACTORY WORKERS (DRESS CUTTERS), MONTREAL, P.Q.**—Commencing on March 6, when 150 dress cutters, members of the International Ladies' Garment Workers' Union, ceased work in seventy-five establishments in Montreal, this dispute was terminated by March 10. The strikers, who had demanded increased wages and reduced hours, returned from time to time as the union reached individual agreements with most of the firms involved providing substantially for the improvements asked. A representative agreement is summarized elsewhere in this issue.

**CAP FACTORY WORKERS, MONTREAL, P.Q.**—This dispute, commencing March 15 in sixteen cap manufacturing establishments in Montreal, involved 130 operators, cutters, etc., members of the cap makers' section of the Cloth Hat, Cap and Millinery Workers' International Union, in a demand for increased wages and improved working conditions. Work was resumed after one day, verbal agreements being reached with most of the employers involved providing for increases stated to range from fifteen to one hundred per cent, the forty-four hour week, and the abolition of contract work.

**MILLINERY WORKERS, MONTREAL, P.Q.**—Commencing on March 17, in the establishments of thirty-six millinery firms, this dispute involved 1,500 members of the millinery local of the Cloth Hat, Cap and Millinery Workers' International Union. Work was resumed on March 20 when the strikers' demands for in-

creased wages, improved working conditions and recognition of the union were granted in a collective agreement with thirty-four firms involved.

**MILLINERY WORKERS, TORONTO, ONT.**—Employees in twenty-two shops ceased work demanding increases in wages, the forty-hour week, and the closed union shop. On March 26 employees in most of the shops involved were reported to have resumed work, the employers having signed agreements with the Cloth Hat, Cap and Millinery Workers' International Union.

**WOMEN'S CLOTHING FACTORY WORKERS (CLOAKMAKERS), TORONTO, ONT.**—Employees in a number of contract shops ceased work on March 22 to secure union wages and working conditions as under the agreement between the Industrial Council of the Cloak and Suit Manufacturers of Toronto and the International Ladies' Garment Workers' Union, signed on January 29, 1934, following a strike (LABOUR GAZETTE, February, 1934, page 193). A number of pickets who entered an establishment where the employees did not strike were arrested on charges of using threats and violence and were subsequently fined. At the end of the month no termination had been reported.

**PRINTING COMPOSITORS (NEWS OFFICES), LONDON, ONT.**—A number of the compositors in the establishments of two daily newspapers ceased work on March 1, the agreement entered into on January 1, 1931, having expired in December, 1933. The employers proposed that wages and working conditions should continue without change until business conditions should warrant an increase in wages, without a signed agreement as in the case of other classes of employees. The union desired a signed agreement and proposed that contentious questions should be referred to arbitration, that negotiations should be with union officers, also that measures should be considered to alleviate unemployment, that there should be no interference with union rules, and also reported that the employers brought in strike breakers while negotiations were in progress. No settlement being reached as a result of many conferences, employees ceased work on March 1. Work was carried on by a number who did not strike and with a number of new employees and at the end of the month no termination had been reported.

**FOUNDRY WORKERS (AUTOMOBILE PARTS), WINDSOR, ONT.**—In one establishment at Windsor, Ont., on March 26, 1934, about 250 moulders, grinders, etc., ceased work following the discharge of several workers for alleged union activity and demanding increases in

wages, the eight-hour day and recognition of the Automobile Workers' Industrial Union. Two hundred employees were indirectly affected also. Pickets were placed about the plant, but negotiations between the parties involved resulted in the resumption of work on March 29 at a wage scale stated to be twenty to twenty-five per cent higher, moulders averaging 55 cents per hour, coremakers 50 cents, grinders, etc., 45 cents, labourers 40 cents, women 30 cents; with the nine-hour day instead of ten, with overtime rates after ten hours, and the recognition of shop committees, union recognition not being conceded.

**GLASS FACTORY WORKERS (BLOWERS), WALLACEBURG, ONT.**—Glass blowers in one department of a factory, numbering about seventy-five, ceased work owing to a dispute as to wages. A settlement was reached in a short time, only a few hours' work being lost on March 26.

**FURNITURE FACTORY WORKERS, TORONTO, ONT.**—Demanding a twenty-five per cent increase in wages, the forty-four-hour week, the establishment of shop committees and recognition of the Furniture and Woodworkers' Industrial Union, ten upholsterers, springers, etc., employed by one chesterfield manufacturing company in Toronto, ceased work on March 17. Negotiations as to an agreement had been in progress for some time and after one day an agreement was reached, retroactive to March 15, providing for the wages, hours and conditions demanded by the strikers. The agreement is summarized elsewhere in this issue.

**PLUMBERS, SASKATOON, SASK.**—On the expiration of the agreement between the master plumbers' association and the United Association of Plumbers and Steamfitters, the employers proposed a reduction in wages from \$1.05 per hour to 75 cents. The union, however, desired an increase in wages and a thirty-hour week instead of forty as before, and declared a strike on March 1. It was reported that only about six out of the thirty-five plumbers were employed. The employers offered a wage rate of \$1 per hour and early in April negotiations for a settlement were expected to be successful.

**PAINTERS, TORONTO, ONT.**—A number of painters, reported variously from 100 to 200, members of the Building Trades Workers' Industrial Union, ceased work on March 5, demanding increases in the wage rate to 60 cents per hour until May 1 and 75 cents thereafter, with the forty-hour week instead of forty-four, also the closed union shop. Some twenty employers were said to be affected. It was re-

ported that in three or four days fifteen employers had signed agreements with these provisions, terminating the dispute.

**LONGSHOREMEN, DIGBY, N.S.**—Men engaged in loading a steamboat with lumber, at 12½ cents per hour with board, having been brought in for the occasion, ceased work on March 15 in response to representations from unemployed residents of the locality who had refused employment at the rates offered, demanding 25 cents per hour. In a few hours the employer engaged unemployed residents at 25 cents per hour.

**CLEANERS DYERS, ETC., TORONTO, ONT.**—Employees in one establishment, members of the Cleaners and Dyers' Industrial Union, ceased work on March 16, demanding increases in wages, reductions in hours and recognition of the union. It was reported that wages were about \$15 per week and hours ten per day. Strikes were also threatened or declared in a number of other establishments but it is not clear to what extent the workers responded. In two days the employer reached a settlement with the union providing for increases in wages of thirty per cent and a fifty-hour week. Similar settlements were made with eleven other employers, averting further stoppages.

**AUTOMOBILE WASHERS, TORONTO, ONT.**—Employees in one car-washing plant, members of the general workers' local of the Workers' Unity League, are reported to have ceased work on March 26, demanding increases in wages, piece rates. It is alleged that each man was paid two cents for the part of the car washed by him and that earnings were about \$4 per week or less. At the end of the month the establishment was still reported to be picketed.

**RESTAURANT EMPLOYEES, TORONTO, ONT.**—Employees, members of the Food Workers' Industrial Union, ceased work early in the month in several restaurants, demanding increases in wages, reductions in hours, and recognition of the union. In one restaurant it is reported the employer accepted the union terms when the strike was threatened, and in other cases settlements were soon reached. The proprietor of one restaurant, where only two employees ceased work, picketed by the union, secured from the court an order prohibiting the display of signs by the union pending trial of an application for a permanent injunction. Settlements in other restaurants have not been reported.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue of February, 1934, in the review of Strikes and Lockouts in Canada and Other Countries, 1933. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Statistics given in the annual review and in this monthly article are taken as far as possible directly from the government publications of the various countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

### Great Britain

The number of disputes reported as beginning in February was 45, and 11 were still in effect from the previous month, making a

total of 56 disputes in progress during the month, involving 9,000 workers with a time loss of 44,000 working days for the month. Of the 45 disputes beginning in February, 6 were over advances in wages, 5 over proposed wage reductions, 11 over other wage questions, 12 over questions respecting the employment of particular classes or persons, 4 over questions of trade union principle and 7 over other questions. Settlements were reached in 41 disputes, of which 15 were in favour of workers, 14 in favour of employers and 12 ended in compromises. In the case of 4 other disputes, work was resumed pending negotiations.

### Australia

The number of disputes in existence in the year 1933 was 90, involving 195 establishments and directly involving 26,988 workers with a time loss of 111,956 working days for the year.

### New Zealand

The number of disputes occurring in the year 1933 was 16, involving 48 firms and 3,957 workers, with a time loss of 111,935 working days for the year.

### United States

The number of disputes beginning in January was 56 and 42 were still in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 17,591 and the time loss 451,762 working days for the month.

Two thousand employees of aeroplane manufacturing establishments at Buffalo, New York, went on strike March 27 for higher wages.

A strike of nearly 4,000 employees of an aluminum company at New Kensington, Pennsylvania, was terminated March 12 with an agreement to advance wage rates by 11 per cent and to discuss at further conferences the question of union recognition and the check-off.

About 4,600 employees of manufacturers of automobile parts at Detroit, Michigan, were on strike for a week and were successful on April 9 in securing a 10 per cent wage increase.

Several thousand taxi drivers in New York City went out on strike about March 10. The matter in dispute was the claims of rival unions to represent the drivers. A number of disorders occurred, resulting in serious injuries to persons and property damage, and up to the end of March, both the mayor of the city and the Regional Labour Board were unsuccessful in terminating the dispute.

Several thousand federal relief labourers were on strike in various centres in New York state during March, and in some cases were successful in securing certain changes in hours and wage rates.

### "The Safest Mill in Canada" Contest

The final reports on the six months' contest, from July 1 to December 31, 1933, for the trophy offered by the magazine *Pulp and Paper of Canada* for the safest mill in the paper industry in the Dominion, shows that the Gatineau plant of Canadian International Paper Company won the Class A trophy with 670.88 credits and Mille Roches wins the Class B trophy with a clear record (1,000) points. The runner-up in Class A is the Three Rivers (Wayagamack) Division of Consolidated Paper Corporation with 650.08 credits, and the runner-up in Class B is Canadian Cellulose Ltd., at Cornwall, Ont., also with a clear record, but with fewer payroll hours, and consequently less exposure to accident than in

the case of the Mille Roches mill. Two other plants with perfect records were Bennett Limited at Chambly Canton and James C. Wemyss at Danville, Quebec.

Trophies have been awarded annually by *Pulp and Paper of Canada* for the past eight years. The purpose of the contest is to create a "safety complex" in the industry that will make pulp and paper mills safer places to work in. The reports of the contest show the number of accidents in connection with the work of each competing mill; the days of lost time, the total payroll hours of exposure to risk, and the points gained or lost by the contestants.

The development of a motor fuel containing tetraethyl lead having raised questions concerning its effects on the health of workers and of the public, an investigation of the lead hazards associated with the distribution of gasoline containing this substance was undertaken in the Kettering Laboratory of the University of Cincinnati, the results being published in the *Journal of Industrial Hygiene*, March, 1934. The investigators examined over 300 men who had been exposed to leaded gasoline for a prolonged period. No clinical evidences of lead absorption or of lead intoxication were found in any individual. "In view of the negative evidence obtained in this study of persons whose exposure to leaded gasoline and its combustion products was magnified to a point well above that which is possible in the general population, there is no reason to fear the existence of danger to the public health from the distribution and use of leaded gasoline."

President Roosevelt, on March 23, expressed the hope that the Unemployment Insurance bill now before the United States Congress would be passed at the present session. The provisions of the "Wagner-Lewis bill" were briefly summarized in the *LABOUR GAZETTE*, February, 1934, page 95. If enacted, the measure would levy a tax on employers' payrolls, part of which would be remitted in the case of employers who contribute to state or company insurance funds.

The Technical Education Extension Act, 1934, was assented to on March 28, its effect being to extend for a further term of five years the period within which the unexpended portion of the ten million dollars appropriated under the Technical Education Act (Revised Statutes of Canada, 1927, chapter 193; amended 1921, chapter 8) may remain available according to its apportionment for the purposes of the Act.

## FINAL REPORT OF ALBERTA LEGISLATIVE COMMISSION ON MEDICAL AND HEALTH SERVICES

THE Commission on Public Health Service appointed by the Alberta Government in 1932 presented their final report to the Legislature at its recent session. The appointment and the personnel of this commission were noted in the *LABOUR GAZETTE*, April, 1932, page 412; July, 1932, page 742, and a progress report was outlined in the issue of May, 1933, page 509. The inquiry arose out of a resolution unanimously adopted by the Legislature instructing the government to appoint a commission, consisting of at least five members of the Legislature, "for the purpose of (a) considering and making recommendations to the next session as to the best method of making adequate medical and health services available to all the people of Alberta; and (b) reporting as to the financial arrangements which will be required on an actuarial basis to ensure same." In accordance with this resolution a commission was appointed by the government on June 13, 1932, as follows: Hon. George Hoadley (chairman); Hon. Irene Parby, M.L.A.; W. G. Farquharson, M.L.A.; Rudolph Hennig, M.L.A., A. P. Mitchell, M.L.A.; Dr. W. A. Atkinson, M.L.A.; Chris Pattinson, M.L.A.; and Geo. E. Cruickshank, M.L.A.

The Commission state their opinion that 'adequate medical services will never be available to all the people of Alberta until income earners, through a system of compulsory contribution, contribute a monthly sum sufficient to provide adequate medical services for all the people of the Province.'

They recommend that a state fund, centrally controlled and administered by a state board, be established. They further recommend that local advisory committees be established for each unit.

*An Adequate Service.*—The report lays stress on the need for a high quality of medical service:—"Training in the pure and applied elementary sciences should be continued, and at least one year of post-graduate work should be required as preparatory to a licensing examination which should stress the art of medicine. Time and opportunity for post-graduate studies should be provided, and examinations should be conducted at five-year intervals to determine whether or not the practitioner is keeping in touch with the recent information pertaining to the practice of his profession. We consider that the course of studies should be so designed as to equip practitioners to provide all ordinary medical and surgical services except those that re-

quire long practice for special information and technique. We believe that the general practitioner should be retained as the family physician in order that a close personal contact may be maintained between physician and patient. We consider that specialization is an essential feature of any progressive organization, and in order that the interests of the public and those specializing be safeguarded, we consider it essential that existing statutory provision for the certification of specialists be enforced rigidly. We consider that in order to receive and retain specialist standing, a practitioner should be required to limit his practice to the work included in his specialty." As to the extent of the service provided in relation to the numbers of persons served the report states that usually the ratio of one physician to each 850 population is considered as about ideal. In Alberta a ratio of one physician to each 1,000 population would be, in our opinion, adequate. Ratios of 2,000 persons for each dentist and 500 persons for each nurse are considered suitable. The minimum requirement for hospital service is placed at one bed for every 300 persons to be served, with one for every 250 persons as the optimum consistent with efficiency.

*Preventive Medicine.*—The Commission express their conviction that any system of medical administration which does not make provision for prevention cannot function in the best interests of the insured. "Prevention lies at the very base of any efficient health structure, and all preventive and curative health services must be closely co-ordinated if efficiency is to be maintained. It has been estimated that the annual cost of preventable illnesses in the Dominion of Canada (exclusive of loss of time and production) is \$50,000,000. Alberta's share of this preventable loss is about \$3,400,000. An analysis of our public health vote reveals the fact that about eighty-seven per cent of it is in reality a public sickness vote and that the remaining thirteen per cent is available for preventive work and central administration charges. . . . If the mounting costs of public sickness continue at their present rate, it is probable that the day will come when there will not be enough people physically and mentally able to bear the economic burden of taking care of the physically and mentally sick. It would serve no useful purpose to present this problem if there were no solution. Your Commission believes that the solution lies in provision for a wider

application of the principles of prevention, as they apply both to physical and mental diseases.

"When the individual, the municipality, and the state are prepared to practice in fact what the thinking among them admit in principle, namely, that the most effective way to deal with disease is to prevent it, then we shall have started on the road towards adequate medical service for the people of Alberta."

*Local Units.*—As a model for a Public Health Service for rural Alberta the Commission names the organizations in the Red Deer and Okotoks-High River Full Time Health Districts, which are stated to have given a very fine type of public service since June, 1931. The Red Deer unit, for example, consists of five municipal districts; it embraces a population of about 19,000 persons, of whom about 4,200 are school children. The total assessment of the municipalities included in this unit is approximately \$17,811,000. "If the entire cost of the service were borne by the municipalities served, the required mill rate would be  $\frac{1}{10}$  of a mill, or a *per capita* cost of 58 cents. At present the municipalities concerned bear one-quarter of this cost. Each district is served by a full-time medical officer of health with special qualifications in public health work, two full-time public health nurses with special qualifications, a part-time sanitary inspector, and a part-time stenographer. With organizations such as exist at Red Deer and Okotoks-High River, staffed with similarly qualified doctors and nurses, we could expect the same good results in other health districts established in the Province. Such full-time health units could be utilized as the administrative centres for each unit of the proposed health insurance scheme in the rural part of the Province. By this means co-ordination of all services would be assured. The physician practising curative medicine would be given the preventive point of view, and as the family physician, friend and counsellor of the family, would have an excellent opportunity to take his proper place in the preventive health program of the district. He would be the adviser of the family during the pre-natal period, and would not be called, as is the case in so many instances under our present system, for the first time after some serious complication had developed. He would assist the medical health officer at baby clinics, in the periodic physical examinations of children of school and pre-school age, in vaccinating and inoculating, and in life extension examinations of adults. Also he would provide the medical and surgical service required for the correction of the defects found in the above noted examinations.

Because the patient's fear of incurring expense would be eliminated, the physician would be called promptly when indications of contagious disease appeared in the family, school or community, and so many epidemics would be cut short instead of gaining the momentum they frequently do under the present system of health service or lack of service in some of the rural parts of the Province. The laboratory service of the health district could also be made available to the clinician, and would be invaluable in assisting in the clinical diagnostic work. With a trained staff in the field of preventive medicine, co-operating with the practitioner in curative medicine and with the assistance of community welfare organizations, the most complete type of medical service will be assured to the people of Alberta.

*Existing Services.*—The report next describes the existing provisions for medical services in Alberta, the provincial Board of Health being responsible for making health regulations under the Health Act and for the general supervision of public health in the Province. There are now 567 physicians practising in all branches of service. In the ten-year period ending 1932 a decrease of about 20 is shown in the number of medical practitioners, though the population of the province in that period increased by 140,000. In 1932 one doctor was serving 1,305 persons on the average. The ideal arrangement, as stated above, would be one physician to each 1,000 persons.

*Decentralization.*—Discussing the possible ways for expanding medical services the report says: "We are confronted with a choice of two policies—centralization and decentralization. Under centralization all public health activities would be directly under the control of the Provincial Board of Health. While such a service might have many advantages, it is open to one adverse criticism, which is, in our opinion, insurmountable, namely—without local participation, interest in any scheme is lost. The project is regarded as a far-away activity of a central organization and of little local concern. Such an attitude is the reverse of what should be established. We must learn that disease prevention is of vital interest to the individual, the family and the community.

"Under decentralization the Province would be divided into health districts large enough to maintain a full-time public health service. The district might be a combined one, comprising a small city or large town and the surrounding country, or might be rural, including the villages and towns within the boundaries of the municipal districts concerned."

The report notes the existence of various group schemes in the province, but all the existing medical and allied services, with the exception of the hospitals, are declared to be inadequate. Moreover, even the existing services are not being utilized. Hospital beds are idle; physicians, dentists and nurses as groups could do more work than they are getting. "It is also a well known fact that the services that are being utilized are being paid for only in part. From thirty-five to forty per cent of all hospital accounts are not collectible. From fifty to seventy-five per cent of all medical accounts are not being collected. It is evident that even the existing services are not within the individual resources of the Province."

*Medical Services not Used.*—The Commission notes the failure of the present generation to avail itself of medical science as it might: "Each year we can count our premature deaths from preventible causes by the hundreds and our complications and incapacities by the thousands. In spite of the progress we have made in the control of communicable diseases, they are still all too frequent. Perhaps three principal factors contribute to this failure to apply and use what we know. These factors are: ignorance, apathy, and the faulty administration of medical services and medical economics. . . . Each year we, in the Province of Alberta, waste about five hundred thousand badly needed dollars on quack forms of treatment. Ignorance and gullibility usually are found together. It rests with health educationists to teach the principles of hygiene and educate in the science of living . . . . Perhaps the main reason for our failure to use our existing medical services is an economic one. Medical care is postponed because many feel that they cannot afford the expenditure necessary to keep them well. It is not until discomfort or pain forces the individual to seek advice that he is persuaded to make the necessary expenditure. By that time the disease is usually serious and the expenditure great."

The Commission concludes this section by stating the opinion above quoted, that adequate medical services call for a system of compulsory contributions by earners of income in the province.

*Requirements of an Insurance Scheme.*—Discussing the methods of making adequate services available to all the people the report states: "The fundamental factor requisite for the success of any scheme is the participation of a number large enough to spread the risk so that the premiums received may be adequate to provide for the current expenditures and to provide a reserve fund for emergent situations . . . . The administrative

unit should be large enough to assure economical administration and not so large as to lose that sense of local responsibility so necessary for the successful operation of any scheme. . . .

"Health insurance must provide for a specific period only. The period must bear a direct ratio to the length of time an individual has been contributing to the scheme, otherwise, in its early stages, the financial structure of the scheme probably would not be equal to the strain of the cost of treating the accumulated chronic cases that would be presented for treatment. A maximum of a stated period (say twenty-six weeks) during which the insured is entitled to what may be termed active hospitalization, should be established, except for certain types of sickness that may require more prolonged treatment in a general hospital. For chronic and incurable diseases a system of invalidity insurance should be established, and institutions for such cases should be provided. Separate health insurance and invalidity funds should be maintained."

*Contributions and Benefits.*—The following basis of contribution to a health insurance scheme is suggested:—

For employees: Employee ½. Employer ½, State ½.

For Rural Municipal Schemes: Municipality ⅓, State ⅓.

For Employers and Individuals engaged in Private Industry: Individual ⅓, State ⅓.

For the Unemployed and Those Without Incomes: At present there is statutory provision for the medical care of this group as a charge on municipal funds. In operation the provision is far from satisfactory. The cost of the care of this group should be a charge on the collective funds of any plan, and should be included in the budget of any scheme.

A complete service would include:—(1) the regular general practitioner service of general medicine, minor surgery, obstetrics, etc.; (2) Specialized service—special diagnostic services and major surgery; (3) Hospitalization and hospital facilities such as pathological laboratory services, X-ray laboratory services, etc.; (4) Dental services; (5) Prescribed medicines, prescribed surgical appliances, etc.; (6) A preventive medical service, that is, a public health service similar to that now available in the larger urban centres such as Edmonton and Calgary and the rural districts such as Okotoks-High River and Red Deer.

On the question of possible carriers of such insurance the Commission expresses preference for a state fund, controlled and administered by a state board, and supported by local advisory committees.

*Payment of Doctors.*—Two possible plans for the payment of doctors under the scheme are discussed: "The one is the 'contract-salary' system, whereby those whose services are required would be employed under contract on a salary basis to serve the community. Contracts for hospitalization might also be required. There is no doubt that in the more remote and sparsely populated districts this system of payment is the only feasible one.

"The other system of payment is the 'Payment for Services Rendered' system, whereby the individual providing a service presents an account for that service. Experience will teach us which system is best designed, both from a service and an economic point of view, to meet the needs of the particular district in which the scheme is to operate."

The Commission recommends the adoption of an adjusted schedule providing a more equitable ratio between the fees for medical and for surgical services; and between fees for general and specialized services. The Commission is of the opinion that the existing schedule of fees for surgical and specialized services is too high.

Two plans of medical service are outlined in detail, the first being designed for early application, and the second for ultimate application.

Concluding their report the Commission state that in a relatively new province such as Alberta, with a large proportion of the population engaged in farming and with many of the district still in a pioneering stage, it appears that there is no scheme existing elsewhere that can be applied to the Province as a whole. "Certain frontier areas that now exist or may be established will be unable to maintain a complete medical service. For the better developed of these districts we recommend the establishment of a state subsidized medical doctor, assisted by a nurse. Some of these districts might be served by a nursing service only. In these districts we believe that a travelling clinic can give the type of service in minor surgery best suited to the needs and resources of the district. For the more thickly populated areas of the Province, the plan for a municipalized, medical insurance scheme as herein outlined is recommended."

## ANNUAL REPORT OF MANITOBA BUREAU OF LABOUR

THE eighteenth annual report of the Bureau of Labour and Fires Prevention Branch, Department of Public Works of Manitoba, reviews the operations of the branch during the year ended April 30, 1933. In 1931 the Legislature adopted the Department of Labour Act, to come into effect upon proclamation but which to date has not been so proclaimed. Accordingly the functions of such a department are still being administered by a bureau of the Public Works Department, which is responsible for the administration of the following enactments: the Bureau of Labour Act; the Manitoba Factories Act; the Bake Shops Act; the Shops Regulation Act; the Minimum Wage Act; the Elevator and Hoist Act; the Steam Boiler and Pressure Plant Act; the Building Trades Protection Act; the Public Buildings Act; the Fair Wage Act; the Electricians' Licence Act; the Public Amusements Act (the licensing of cinema projectionists); the Fires Prevention Act; and the One Day Rest in Seven Act.

The administration of the above acts entailed considerable inspection service and the inspections and orders issued respecting each are summarized in tabular statistics in the report. During the year there was a total of 13,613 inspections made and 5,790 orders issued as compared with 15,422 inspections

and 6,545 orders in 1932. Most of the orders issued under the various Acts were for improvements in the interests of safety or health and sanitation, while under the Minimum Wage Act the orders largely concerned hours and wages. Only one case of child labour was found.

In the accompanying table, the number of inspections and orders under each Act during the year are summarized.

*Accidents and Prevention.*—During the year, there was a total of 2,232 industrial accidents of which five were fatal. Of the total number of accidents, 2,021 were in the industrial group; 204 in the building trades; and 7 were attributed to elevators. As regards accident prevention, the report considered that it was a "business proposition," working out its problems along three main lines—engineering, education, and enforcement. In conjunction with the Workmen's Compensation Board, a policy was adopted whereby it was made possible for all industrial workers to receive first aid instruction in organized classes, and through the activities of the Manitoba First Aid Industrial Association. A considerable amount of work was done in the matter of traffic hazards.

*Steam Boilers.*—As in previous years, supervision of all steam plants throughout the province was maintained for the purpose of

seeing that only properly qualified and licensed engineers be employed in conformity with the Act. A total of 1,125 certificates and renewals to engineers was issued, the fees of which amounted to \$2,344.68. The usual details were given of the inspection of steam plants, air tanks, refrigeration plants etc. and the fees received for same.

*Fair Wage Act.*—The Fair Wage Board held a number of meetings in connection with revising the schedule for the current year. Eighteen claims for wages were made under this Act, involving \$489.98, and all were satisfactorily adjusted.

*Licensing of Workmen.*—The Board of Examiners issued 228 licences, 2 permits, and 51 contractors' certificates, the total collected in fees was \$1,925.09. Forty-six tried the examinations to qualify as cinema projectionists, as a result of which a total of 13 certificates were issued. Fees totalled \$606, while the licence fees for dry-cleaning establishments amounted to \$1,056.

*Fire Prevention.*—The fire loss for Manitoba in 1932 totalled \$1,585,906 or \$2.26 *per capita* as compared with \$2,517,056 or \$3.59 in 1931. Fire prevention methods were summarized and the causes of fires were analysed. There were eleven prosecutions for arson and 77 investigations into fires of suspicious origin.

*General Complaints.*—During the year, there were 168 complaints under the several acts administered by the Bureau, all of which were adjusted. These were as follows: Minimum Wage Act, 134; Fair Wage Act, 18; Electricians' Licence Act, 5; Steam Boiler and Pressure Plant Act, 3; Elevator and Hoist Act, 2; One Day Rest in Seven Act, 6.

SUMMARY OF INSPECTIONS MADE AND ORDERS  
ISSUED BY THE BUREAU OF LABOUR FROM MAY  
1, 1932, TO APRIL 30, 1933.

Statute	No. of Inspections	No. of Orders
The Manitoba Factories Act.....	1,453	873
The Bake Shops Act.....	67	19
The Shops Regulation Act.....	43	31
The Minimum Wage Act.....	2,102	579
The Elevator and Hoist Act.....	4,213	1,486
The Steam Boiler and Pressure Plant Act.....	4,095	1,721
The Building Trades Protection Act.....	277	135
The Public Buildings Act.....	22	20
The Electricians Licensing Act....	377	24
The Public Amusements Act.....	22	20
The Fires Prevention Act.....	882	876
The One Day Rest in Seven Act....	60	6
Total.....	13,613	5,790

### Minimum Wage Act

Included in the annual report of the Bureau of Labour of Manitoba is the report of the Minimum Wage Board. The Board points out that at the 1933 session of the Legislature the Minimum Wage Act was amended to bring all male employees over the age of eighteen years within the scope of the Act in so far as wages were concerned (LABOUR GAZETTE, July, 1933, page 700). During the year, also, there was a revision of Regulation 7 governing employees in the following industries: Artificial flowers, ladies' wear, bedding, hats and caps, jewellery, regalia, etc. (LABOUR GAZETTE, September, 1933, page 917).

There were 19 prosecutions for violations of the Act, sixteen being under the Regulation governing laundries and three under that governing hotels and restaurants. Convictions were obtained in thirteen of the nineteen cases.

In addition, 106 claims for wages were adjusted and collections effected. Of these, 94 were claims of female employees and involved a total of \$1,281.46 while 12 were claims of boys and involved wage money amounting to \$193.64.

The number of inspections in Winnipeg under all the orders governing female employees totalled 1,340. These resulted in 264 orders respecting either conditions of work, hours, or wages, plus 195 other regulations. Outside of Winnipeg, there were 112 inspections with 18 orders issued.

The details of inspection work in connection with boys under 18 years of age showed a total of 650 inspections with 91 orders and 10 other regulations issued as a result.

During the quarter ending March 31, a total of 9,613 accidents were reported to the Ontario Workmen's Compensation Board in the industries in Schedule 1 of the Act, 39 of which were fatal accidents; in Schedule 2 industries 619 accidents were reported including 7 fatal cases; and 1,562 accidents to employees of the Crown, 11 of which were fatal were reported during the last quarter, making in all 11,794, of which 57 were fatal. During March, 4,057 accidents were reported to the Board as compared with 3,930 during February, and 2,935 during March of 1933. The fatal cases numbered 24, as against 17 in February. The total benefits awarded amounted to \$344,412.39, of which \$277,930.51 was for compensation and \$66,481.88 for medical aid.

## WOMEN'S MINIMUM WAGES IN QUEBEC

### New Orders Governing Female Employees in Various Industries

**N**EW orders under the Women's Minimum Wage Act of the Province of Quebec, to become effective on June 1, 1934, were gazetted on March 31, 1934, as follows:—

**Order No. 15.—Governing female employees in the following industries: Rubber, Linoleum, Oil cloth Trades and Allied Processes.**

1. Minimum: No wage shall be less per week than is set forth in the following table:

*City and Island of Montreal and a Radius of Ten Miles Around and Beyond the Island*

**Experienced Workers—**

After 24 months' experience at the trade, no female worker shall be paid less than \$12.

**Apprentices—**

Beginners, not less than.. . . .	\$ 7 00
After 6 months' experience.. . . .	8 00
After 12 months' experience.. . . .	9 50
After 18 months' experience.. . . .	11 00

*Province of Quebec, with the Exception of the City and Island of Montreal and a Radius of Ten Miles Around and Beyond the Island of Montreal*

**Experienced Workers—**

After 24 months' experience at the trade, no female worker shall be paid less than \$10.

**Apprentices—**

Beginners, not less than.. . . .	\$ 6 00
After 6 months' experience.. . . .	7 00
After 12 months' experience.. . . .	8 00
After 18 months' experience.. . . .	9 00

2. Hours of Work: The work-period for which these minimum wages shall be paid shall be 50 hours per week.

(a) Work in excess of the above work-period shall be counted as overtime and shall be paid for at not less than the minimum wages fixed by this Order.

(b) Work for less than the above work-period may be counted as short time and be paid for *pro rata* of the minimum wages fixed by this Order.

(c) The total of working hours cannot in any case exceed 55 hours per week unless a special permit has been obtained from the Public Buildings and Industrial Establishments Inspection Department.

3. Maximum of Apprentices: The number of apprentices shall not exceed one-half of the total female working force.

4. Piece Work: The wages paid to each time-worker and to each pieceworker during the first six months' employment in the industry shall conform to this Order. In the case of pieceworkers of more than six months' experience, it is sufficient if at least 80 per cent receive wages conformable to this Order.

5. Deductions for Absence: No deduction below the minimum wage line for absence shall exceed the value of the time lost, based on the wage of the employee.

6. Waiting Time: Any employee required to wait on the premises shall be paid for the time thus spent. Pieceworkers shall be paid at a rate not less than that fixed for the class to which they belong.

7. Permits: The Board may issue permits for lower wages on behalf of aged or handicapped workers. It may also grant permits of variation or suspension of any of these regulations in case of exceptional conditions. Employers and employees are invited to consult the Board regarding any problems which this Order may concern.

8. Penalties: Any violation of this Order is punishable by fine. (See Section 12 of the Act.)

9. Posting: Each establishment shall keep a copy of this Order posted in a conspicuous place in the shop.

10. This order is subject to annual revision by the Board.

11. This Order shall come into force and be effective on June 1, 1934.

GUS. FRANCO, Chairman.  
OMER BRUNET,  
C. J. GRIFFIN,  
EUG. RICHARD.

Montreal, March 6, 1934.

**Order No. 16.—Governing female employees in the Jewelry and Optical Trades, including Watch-making, Silver plating and allied processes.**

1. Minimum: No wage shall be less per week than is set forth in the following table:

*City and Island of Montreal and a Radius of Ten Miles Around and Beyond the Island*

**Experienced Workers:**

After 24 months' experience at the trade, no female worker shall be paid less than \$12.50.

**Apprentices—**

Beginners, not less than.. . . .	\$ 7 00
After 6 months' experience.. . . .	8 00
After 12 months' experience.. . . .	9 50
After 18 months' experience.. . . .	11 00

*Province of Quebec, with the Exception of the City and Island of Montreal and a Radius of Ten Miles Around and Beyond the Island of Montreal*

**Experienced Workers—**

After 24 months' experience at the trade, no female worker shall be paid less than \$10.

**Apprentices—**

Beginners, not less than.. . . .	\$ 6 00
After 6 months' experience.. . . .	7 00
After 12 months' experience.. . . .	8 00
After 18 months' experience.. . . .	9 00

2. Hours of Work: The work-period for which these minimum wages shall be paid shall be 48 hours per week for the City and Island of Montreal, and 50 hours per week for the rest of the Province.

(Section 2 (a), (b) and (c), and sections 3-11 are the same as in Order No. 15.)

**Order No. 17 (Provisory).—Governing female employees in the Paper Box and Paper Bag Making, Wooden Boxes partially made or finished with Paper or Cardboard, Manufacturing Stationery, and other trades making Paper or Paper Products.**

*City and Island of Montreal and a Radius of Ten Miles Around and Beyond the Island*

1. Minimum:

50 per cent of the employees at not less than per week...	\$ 7 00
50 per cent of the employees at not less than per week...	10 00

*Province of Quebec, with the Exception of the City and Island of Montreal, and a Radius of Ten Miles Around and Beyond the Island of Montreal*

50 per cent of the employees at not less than per week...	\$6 00
50 per cent of the employees at not less than per week...	9 00

2. Hours of Work: The work-period for which these minimum wages shall be paid shall be 50 hours per week for the City and Island of Montreal and a radius of ten miles around and beyond the Island of Montreal, and 55 hours per week for the rest of the Province.

(Section 2 (a), (b) and (c), is the same as in Orders No. 15 and 16.)

3. All employees, either timeworkers, piece-workers or paid by any other mode, are subject to the above specified minimum wages.

4. Deduction for Absence: No deduction below the minimum wage line for absence shall exceed the value of the time lost, based on the wage of the employee.

5. Waiting Time: Any employee required to wait on the premises shall be paid for the time thus spent.

6. Permits: The Board may issue permits for lower wages on behalf of aged or handicapped workers. It may also grant permits of variation or suspension of any of these regulations in case of exceptional conditions. Employers

and employees are invited to consult the Board regarding any problems which this Order may concern.

7. Penalties: Any violation of this Order is punishable by fine. (See Section 12 of the Act.)

8. Posting: Each establishment shall keep a copy of this Order posted in a conspicuous place in the shop.

9. This Order shall come into force and be effective for a period of twelve months, starting on June 1, 1934.

**Order No. 14**

The Women's Minimum Wage Board of the Province of Quebec has re-issued Order No. 14 (gazetted March 17), governing female employees in factories making or preparing food. Order No. 14 was reprinted in the LABOUR GAZETTE, June, 1933, page 610. The new order (No. 14a) makes the following changes in the original order:—

(1) Factories making or preparing food are defined as "including the making of confectionery, chocolate, biscuits, bread, macaroni, and cereals of all kinds, jam, gum, grocery specialties, crushed fruit, syrup, pickles, creameries, butter and cheese factories, together with packing-houses), and all allied industries." (The words commencing "jam," and continuing to the end of the paragraph, are new. In the original order the words following "cereals of all kinds" were as follows: "chocolate, cocoa, confectionery and allied processes.")

(2) In section 2 of the order relating to hours of work, the work period for which the specified minimum rates are to be paid are 50 hours per week (formerly 55 hours).

(3) The order is declared to be in force and effective for twelve months, starting May 15, 1934 (formerly, 1933).

**MOTHERS ALLOWANCES IN NOVA SCOTIA IN 1933**

THE annual report of the director administering the Mothers Allowances Act of Nova Scotia reviews the activities under this enactment during the fiscal year ending September 30, 1933. In a summary of the three years during which the Act has been in force, the director points out that during the first year \$310,602.04 were paid in allowances and the costs of operation were \$22,744.07. During the second year \$331,336.72 were disbursed in allowances and the costs of operation were \$16,824.56. For the third year just closed the sum of \$341,929 has been expended and the costs of operation were \$16,129.38.

In the first year of operation, 1,030 families, comprising 3,179 children, were assisted, dur-

ing the second year 1,108 families and 3,342 children; and for the year ending September 30, 1933, the assisted families numbered 1,158, comprising 3,487 children.

The statistics further indicate that the total number of applicants during the year was 308, of whom 102 were found ineligible, while 206 were approved. There were 655 dependent children in the 206 new beneficiaries, the average number of dependent children per family being 3.18. The number of children over 16 years of age in the new families was 345, and their total reported monthly earnings was \$1,048.82, of which amount \$502.70 was contributed to home support. In 87 of the 206 approved applicants the families were without any property or

cash assets. Of the applications approved by the director, the number of mothers with one dependent child was 27; with two children, 57; with three children, 42; with four children, 43; with five children, 19; with six children, 8; with seven children, 8; with eight children, 1; and with nine children, 1.

## WORKMEN'S COMPENSATION IN NEW BRUNSWICK IN 1933

THE fifteenth annual report of the Workmen's Compensation Board of New Brunswick reviews the administration of the Act during the calendar year 1933. There is also presented a detailed analysis of accidents in 1932, based upon completed statistics.

The report commends the organization of the New Brunswick Accident Prevention Association, but urges its amalgamation with a similar association of lumbermen with the joint objective of lessening compensation costs by reducing accidents.

During the year the Board found it necessary to write off as bad debts the sum of \$597.91, chiefly on account of debtors having left the province or made assignments and received their discharge in bankruptcy. At the end of 1932, after adjustments between actual and estimated income and expenditures the Board concluded with an actual credit balance of \$192,016.25. For 1933 the total income is estimated at \$502,068.66 and the expenditure at \$551,505.78, leaving an estimated deficit of \$49,437.12. However, with the credit balance of \$192,016.25 from 1932, this is converted into an estimated surplus of \$142,579.13. As explained in the report, these balances do not purport to be the actual amount of moneys to the debit or credit of classes, but show what has been collected from the provisional statements filed and what the Board think, after going over the data in their possession, is a fair income to be expected from the amount to be collected owing to the expected increase of the actual payrolls over the provisional. The expenditure shows the same condition. To the amount paid out is added a sufficient sum which the Board estimates will cover the costs of claims in assembly and the claims which may be existing as of December 31, 1933, but not reported to the Board, and also the estimated amount for claims reported, partly paid, but not complete.

Complete accident statistics for 1933 were not available when the report was published, but a tabular analysis is made of accidents

There were 164 "cancellations and 23 renewals during the year. The sum required for the payment of allowances in 1934 is estimated at \$342,000, the total required in connection with the operation of the act being estimated at \$358,900.

in 1932 with a comparison of accident frequency and accident compensation cost of previous years.

*Statistics for 1932.*—This cost has steadily declined from the peak year of 1928 when it was \$641,132.93 to \$359,593.66 in 1932. Accident totals have similarly declined from a peak of 9,281 in 1929, to 4,386 in 1932. Of the 4,386 accidents in 1932, 18 were fatal, 250 involved permanent partial disability; 2,582 temporary total disability; while 1,536 involved medical aid only. In 1931 the total number of accidents was 5,841, classified as follows: fatal, 17; permanent partial, 253; temporary total, 3,328; medical aid, 2,243.

During 1932, the average age of workmen involved in accidents was 34.32 years and their average weekly wage was \$15.47. In temporary total disability cases the time loss averaged 35.18 days, while in permanent partial disability cases the time loss averaged 108.34 days.

The causes of accidents in 1932 were classified as follows: prime movers, 118; working machines, 254; hoisting, 149; dangerous substances, 164; stepping on or striking against objects, 445; falling objects, 592; handling objects, 587; tools, 554; runaways and animals, 35; moving trains, 144; fall of person, 774; all other causes, 605.

The net cost of administration during the year, including the cost of the factory department was \$52,955.72.

Included in the report is the annual statement of the factory inspector, covering the year's activities. During 1933, there were 902 mills, factories, hotels, and industrial plants visited. The revenue from the licensing of stationary engineers amounted to \$1,448. In the matter of boiler inspection, this official found that out of 618 boilers in use, 95 were not insured. He urged that boilers be insured and under the supervision of licensed engineers. It was also recommended that examinations for stationary engineers be on a graded basis.

## ASSESSMENT RATES FOR WORKMEN'S COMPENSATION IN ONTARIO INDUSTRIES FOR 1934

THE Ontario Workmen's Compensation Board announces that merit-rating for the periods 1929-31 and 1930-32 is being made out and will go out to employers with this year's assessments. It is the purpose of the Board to give merit refunds annually, based on the accident experience of each firm for the three preceding years and taking the amount of assessment paid for the last year of the three-year period as the basis of the computation.

In the table of rates for 1934, recently issued, the Board explains the methods followed in arriving at the rates under the collective liability system, which is modified to the extent of permitting rebates in favour of employers with good accident records: "All industries in the same class do not necessarily, nor usually, bear the same rate. The classes are subdivided into groups, and even within the group the rates are different where this is shown to be justified. The experience is kept for the group as well as for the class. In fixing the rates, however, regard must always be had to the fact that each class is an insurance group and that all lines of industry in the class must share to some extent the good or ill fortune of the class as a whole. The rating for each separate line of industry cannot be made to depend upon the experience in that particular line alone. This is especially the case where the total amount of the payrolls in any line of industry is small. To charge that line of industry with

its own cost might place a very excessive burden upon its employers for one year while perhaps relieving them almost wholly from assessment another year. This would destroy the underlying principle of collective liability or mutual insurance which is the basis of the system.

"Individual distinction between employers even in the same line of industry is made according to their accident experience by a system of merit rating. Where the accident cost falls short of the amount of assessment by a stated percentage a merit rating refund, within specified limits, is made accordingly."

For assessment and compensation purposes under the Act the industries covered are divided into 24 classes. Each class stands upon its own footing and carries its own burden except that a very small general fund, known as the Disaster Reserve, is set aside to assist in meeting any extraordinary call that may arise in any class. With the exception of this Disaster Reserve the moneys collected are just what are considered necessary to take care of the accidents that have actually happened.

The table of rates per \$100 of payroll to be levied provisionally for 1934 upon employers coming under the provisions of Part I of the Workmen's Compensation Act shows that for most groups these rates remain unchanged from the adjusted rates for 1933. Changes however are made in the rates for certain groups as follows:—

CHANGES IN ASSESSMENT RATES FOR 1934

Occupation	1933	1934	Occupation	1933	1934
	Adjusted	Provisional		Adjusted	Provisional
	\$ cts.	\$ cts.		\$ cts.	\$ cts.
Tight barrels and kegs, mfg. ....	0 70	0 90	Teaming and trucking of coal, coke, or wood, exclusively for firms engaged in selling of coal, coke, or wood. ....	1 50	1 25
Gun-powder, nitro-glycerine, dynamite, gun-cotton, cordite, or other high explosives, mfg., or shell testing, involving discharge or explosion. ....	1 00	5 00	Coal, wood, and lumber yards, and builders' supply businesses. ....	1 50	1 25
Rolling mills or steel works, with blast furnace. ....	0 50	0 75	Road or street making or repairing, or culvert or small bridge construction. ....	3 50	4 00
Iron smelting, with blast furnace. ....	1 00	1 25	Sidewalks: asphalt or paving material, n.o.s., mfg. ....	1 30	1 50
Structural steel, iron, of metal fabrication. ....	1 50	1 25	Bridge construction, n.o.s. ....	5 00	5 50
Ship building or repairing, including boiler making. ....	4 00	3 00	Concrete or cement work, n.o.s. ....	3 50	4 00
Bolts, nuts, screws, or nails, mfg. ....	0 70	0 60	Excavation work for foundations, n.o.s. ....	3 50	4 00
Cold drawn shafting or tubing, mfg. ....	0 70	0 60	Sewer construction or tunnelling. ....	5 00	6 00
Windmills or metal flagstays, mfg. ....	0 70	0 60	Waterworks, systems, construction of. ....	4 50	5 00
Lightning rods, mfg. ....	0 70	0 60	Excavation work, n.o.s., where the depth is more than six feet and the width is less than half the depth. ....	5 00	6 00
Auto wrecking (by application). ....	0 50	1 00	Electric power or transmission lines, construction of. ....	1 00	1 50
Corrosive acids, mfg. ....	1 00	1 25	Electric light systems, power plants, electric light works or appliances, installation or operation of. ....	1 00	1 50
Wood chemicals or charcoal, mfg. ....	1 00	1 25	Electrical operations by municipalities or commissions (by application). ....	1 00	1 50
Chemicals, n.o.s., mfg. ....	1 00	1 25			
Packing houses or abattoir. ....	0 80	0 75			
Glue, mfg. ....	0 80	0 75			
Fertilizers, mfg., not incidental to any other industry. ....	0 80	0 75			
Confectionery only, mfg. ....	0 40	0 35			
Canning or preparation of fruit, condensed milk, vegetables, fish, or foodstuffs. ....	0 80	0 75			
Woven labels and the like, mfg. ....	0 10	0 20			
Shoe laces and braids, mfg. ....	0 10	0 20			

## GROWTH IN TRADE UNIONISM IN UNITED STATES

A MARKED gain in the membership of trade unions in the United States is noted as following the operation of the National Recovery Act. To guide this movement a new organizing plan was adopted at a recent meeting of officers of International and National unions and the Executive Council of the American Federation of Labor. "The paramount issue," it was stated, "is not what particular form of organization shall be followed in this emergency and this unusual situation. The demand of the moment is to promote organization in whatever form or method is best designed to rally the wage earners to the cause of organized labour, bearing in mind that in the pursuit of organization the present structure, rights and interests of affiliated National and International unions must be followed, observed and safe-guarded. The American Federation of Labor, contrary to a common belief, does not desire to dictate the form of organization that shall prevail among wage earners. Its policy has been that of encouraging whatever form of organization in any trade, calling or industry seems best to meet the situation and the requirements of the workers. The American Federation of Labor has provided methods and means of encouraging organization through federal and local trade unions among workers not embraced in the work of National and International Unions. In that way and by that process quite a number of existing National and International Unions have been formed."

The Executive Council was instructed to exercise the fullest possible latitude in the granting of federal charters, and to adjust any jurisdictional difficulties "in the spirit of taking full advantage of the immediate situation and with the ultimate recognition of the rights of all concerned." Complete understanding and harmony is to be sought among those charged with organization work, so as to lessen unnecessary friction; and special conferences are to be held periodically to review the progress of organization and to plan for future action. Mass meetings of wage earners are being held throughout the country with the help of local unions, and every possible means taken to promote the spirit of organization.

The extent of the increase of labour unions in recent months is described by Professor Sumner H. Schlichter, in the *Harvard Business Review*, January, 1934, as follows:—

"The National Recovery Act has precipitated the greatest organizing movement in the history of American Trade Unionism. . . .

On October 1, William Green reported that the membership of the American Federation of Labor was 3,926,796. Examination of the basis for Mr. Green's estimate led me to believe that it should have been reduced by about 200,000. At the time of his estimate 584 new federal union charters had been granted since the first of July ('Federal Unions' are organized in occupations or industries when there is no national or international union or when the number of workers in the several occupations in the plant or the locality is too small to provide the minimum number required to obtain a local charter from the national or international union. The federal unions are directly affiliated with the American Federation of Labor). By December 13, the number of federal charters granted since the first of July had passed 870. The national and international unions in the Federation had continued to gain in membership. Consequently, it seems safe to infer that by the middle of December the membership of the Federation of Labor had almost reached 4,078,000, which was the average membership in 1920, the peak year. Within the short space of a few months, therefore, the Federation has regained the losses of fifteen years. The average monthly membership of the Federation for the year ending August, 1933, was 2,127,000. For some months of the year the membership must have been below this figure. One might infer, therefore, that during the last few months the membership of the Federation has doubled. This would be an exaggeration, however, because the Federation's figures represent paid-up membership, and part of the recent gains represents an increase in the members paying dues rather than the acquisition of new recruits. Nevertheless, if we assume, as would not be unreasonable, that approximately all of the gain over the paid-up membership of a year ago represents new recruits, the growth in membership is 1,500,000. Particularly significant has been the spread of trade unionism among the semi-skilled workers in the mass-production industries, among whom organization has heretofore made little progress. Large groups of trade unionists now exist in the automobile, rayon, radio, rubber, battery, leather, steel, meat packing, and other industries."

In reply to a question in the Quebec Legislature on March 27, the Hon. Honoré Mercier, Minister of Lands and Forests, stated that 1,388 children, of whom 872 were of school age, lived in the lumber camps in the province during the past winter.

## ANNUAL REPORT OF THE CANADIAN NATIONAL RAILWAY SYSTEM FOR 1933

THE annual report of the Canadian National Railway System for the year ended December 31, 1933, reviews the operations of the government railways under the classifications of working results, revenues, operating expenses, capital expenditures, etc. At the end of the year the cash deficit of the system amounted to \$58,955,388—an improvement of \$1,103,118 as compared with 1932. Dealing with the reduction in revenues, which in turn forced stringent economies in operation, the report states:

"The decline in business activity which had marked the four preceding years continued into 1933, but there was an improvement during the second half of the year. This improvement was, however, insufficient to offset the decreases encountered in the earlier months. The depth of the economic depression may be gauged from the falling off in gross revenues of the Canadian National System which in 1933 were \$163,766,289 under the revenues in 1928. Faced with this large reduction in receipts, the system made drastic reductions in expenditures, the expenses for 1933 being \$113,434,000 below the 1928 level. In 1933 there was a decrease in operating revenues of \$12,583,852 and a reduction in operating expenses of \$12,395,601 as compared with 1932.

"One of the aspects of the necessary economies has been the reduction in the average number of employees and in the average and total compensation. The average number of staff employed in the year 1933 was 36.6 per cent below the 1929 level, and the total payroll disbursement was 46 per cent below the 1929 figure."

The accompanying table indicates the reductions in the number of employees and in the payroll during the past five years.

Year	Average number of employees	Compensation
		\$
1929.....	111,383	177,037,682
1930.....	101,046	159,980,994
1931.....	91,416	139,784,630
1932.....	76,616	106,911,608
1933.....	70,625	95,632,076

In addition to staff reductions, further salary revisions and reductions from basic rates of pay were put into effect in 1933. These additional pay reductions for the present average number of employees are at the rate of \$5,200,000 per year.

The report shows how the elimination of many unprofitable passenger services brought

about a severe curtailment of passenger train miles and of passenger car miles, and how co-operative economies were effected in conjunction with the Canadian Pacific Railway by the partial pooling of services.

Total operating revenues, as already stated, showed a reduction of \$12,583,852, or 7.81 per cent, as compared with the previous year. Freight revenue declined 6.96 per cent; passenger revenue 12.9 per cent, and express revenue, 11.29 per cent; while telegraph revenue showed an increase of \$13,751.

The reduction of \$12,395,602, or 7.99 per cent in operating expenses in 1933 as compared with 1932 was divided as follows:—Labour, \$10,061,645 or 81.17 per cent; material and miscellaneous, \$2,333,957 or 18.83 per cent.

*Pensions and Superannuation.*—Dealing with operation of the various superannuation and pension schemes of the government owned railway, the report states:

Under the provisions of the Canadian National Railways' Pension Act (non-contributory) there were retired during the year 495 employees. The number deceased in 1933, who were in receipt of pension, totalled 246. Total number receiving pension under this Act was 3,250 at the end of 1933. Under the provisions of the Grand Trunk Railway of Canada Superannuation and Provident Fund Association, a contributory fund which was closed to new members in 1908, eight members of the staff were retired during the year 1933. The number of members deceased during the year was two. The number in receipt of superannuation under this Fund was 150 at the close of the year. Under the Intercolonial and Prince Edward Island Railways Employees' Provident Fund Act (a contributory plan, closed to new members in 1929) there were retired during the year 216 members of the staff. The number deceased during the year who were receiving superannuation under this Act totalled 91. The number in receipt of superannuation from this fund totalled 1,661 at December, 1933.

The Quebec Legislature adopted the following motion on March 13:—"That this House prays the Government to find if it is possible to regulate labour so that in commerce and industry it may be compulsory to employ fathers of families in preference to bachelors and men in preference to women or girls, who are not obliged to earn their own living or that of their families, and thus reduce unemployment."

## Railway Operation in Canada in 1933

Statistics of railway operations in Canada in 1933 were published recently by the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics. Canadian railways, it is stated, earned \$267,809,631 during 1933, which was the lowest during the past decade and \$23,122,614 less than the 1932 revenues. Operating expenses, however, were reduced from \$255,286,887 in 1932 to \$231,230,494, or by \$24,056,392, wages accounting for \$19,489,935 of this reduction, and the net operating revenue was increased by \$933,778, or from \$35,645,358 in 1932 to \$36,579,136. The operating income was also increased from \$25,346,382 to \$25,693,733, or by \$347,350. Freight traffic was lighter than in 1932 by 8·8 per cent and passenger traffic declined by 3·0 per cent. Although passenger miles were greater in August, September, November, and December, passenger revenues were smaller each month than in 1932 and the total was less by \$4,623,343, or 12·8 per cent. The monthly average number of employees was 113,908 as against 123,632 in 1932 and 176,947 in 1929. The annual reports include some 7,000 employees engaged in "outside operations" which are not included in this monthly operating report.

*Canadian National Railways* (Canadian lines).—Gross revenues were \$13,247,089 less than for 1932, declining from \$139,948,317 to \$126,701,228, which was less than half the revenues of 1929. Operating expenses were reduced from \$134,300,983 to \$122,572,229, or by \$11,728,753 or 8·7 per cent. The cut in the operating pay roll was \$9,646,236, or 11·1 per cent. The operating income was reduced from \$2,319,799 to \$650,101. Freight traffic was 11·9 per cent lighter than in 1932 and passenger traffic was 3·3 per cent lighter. The monthly average of employees was 61,829, which was 5,505 fewer than in 1932.

*Canadian Pacific Railway*.—Gross revenues amounting to \$113,998,657 were \$9,510,712, or 7·7 per cent, less than for 1932. Operating expenses were reduced by \$10,419,229, or from \$99,671,078 in 1932 to \$89,251,849, and the operating income was increased by \$772,121, or from \$20,089,984 to \$20,862,105. The cut in the operating payroll amounted to \$9,373,136, or 13·9 per cent. The average revenue per freight train mile increased from \$4·80 to \$5, but passenger train revenues per train mile decreased from \$1·43 to \$1·39.

## Change in Property Clause in Australian Old Age Pension Scheme

The Australian Commonwealth Parliament, in December, 1933, amended the "property clause" of the non-contributory old age and invalidity pensions scheme. This clause, which had been in the Pensions Act since October, 1932, provided that the government may recover out of the property of the pensioner or of the widow (or widower) the amount of pensions paid after October, 1932, where the pensioner becomes the owner of a property over £400 in value, not including his home; certain property was excluded from the charge—personal effects not over £50 and such other property not exceeding £50 as the commissioner might determine. The attorney-general explained when moving the amending Bill, that a repeal of the whole of the property provisions would involve an increase in annual expenditure by approximately £650,000 and a substantial increase in the rate of future claims. Under the existing provisions 12,000 pensions had been voluntarily surrendered and claims had been reduced by 13,000.

The Bill provides that the amount of pensions paid after December 31, 1932, shall be a debt due to the Commonwealth but no longer a charge on the pensioner's estate. Funeral and testamentary expenses and all debts of a pensioner will first be paid. The property to be exempt from liability includes personal effects up to £50, funeral and mortuary benefits received from friendly societies, and property passed by will to the widow, widower, father, mother, child, sister or brother of the pensioner, provided the beneficiary is also a pensioner or in necessitous circumstances, or that he resided in the home of the pensioner as a member of his family. Where the beneficiary, under a pensioner's will, has contributed towards the pension, twice the amount contributed is to be deducted from the debt due to the Commonwealth. The Commissioner may exempt any interest in the pensioner's estate in cases of undue hardship, etc. A pensioner may, therefore, now deal freely with his land, the consent of the Commission being no longer required, so long as dealings are *bona fide* and for value.

## CANADIAN NATIONAL SAFETY LEAGUE

### Report for 1933, with Reports of Provincial Safety Leagues

THE fifteenth annual report of the Canadian National Safety League reviews the activities of the various affiliated associations engaged in safety work during the year 1933. In its promotion of accident prevention and safety, the Canadian National Safety League is the co-ordinating agency of the following provincial leagues: Ontario Safety League, British Columbia Safety League, Manitoba Safety League, Province of Quebec Safety League, and the Saskatchewan Safety League. In addition, membership was maintained in various national and foreign organizations.

Prefacing the report is a brief retrospect of safety work in Canada from its pioneer efforts of twenty years ago to the present time. The advance made in the safeguarding of human life is summed up as follows:—

"The attitude of the general public is changing. Many people now recognize the definite results of education in the matter of personal safety and show a willingness to co-operate. The great work must go on, especially among our children. It is needed now more than ever, and the willing hearts and hands of our good and faithful helpers are an assurance that we will never fail in the work commenced right here in Toronto, January the second, 1914."

The general manager's report indicated that the regular bulletin service and distribution of literature was continued during the past year. Approximately 15,000 pieces of safety literature was supplied to the schools, etc., while 15,000 safety calendars were also prepared and distributed.

*Ontario Safety League.*—The 20th annual report of the Ontario Association shows that during 1933 there was a decrease of 250 fatal accidents, while fatalities to children showed a decrease of 41. In the general manager's summary of 1933 safety work, reference is made to the chief features of the year's program—school work and industrial and public safety. The former consisted of illustrated lectures and safety talks supplemented by lecture work in camps during the vacation period. There was the usual bulletin service, emphasizing traffic and aquatic hazards, and annual contest on highway safety. The records indicate a reduction of 66 deaths of children in 18 different hazards offset by an increase of 25 in 9 hazards, making a reduction over all of 41. Of the 311 fatalities among children in 1933, drowning was responsible for 92 deaths; automotive vehicles for 79; burns and scalds for 39; and fires for 25.

The work of the League in public safety consisted of the distribution of special and traffic bulletins, safety lectures, radio talks, and demonstrations of resuscitation. In addition, talks on street and highway safety were given to fleets of drivers employed by large industrial firms. Safety educational bulletins and cards were distributed to motorists, while reports on dangerous practices on the part of drivers were dealt with, letters of caution being issued in each case.

Industrial members were supplied with bulletins dealing with hazards in industry as well as with educational bulletins dealing with street and home hazards.

There was a total of 646,460 pieces of literature, covering every phase of safety work, distributed during the year. The accident statistics for the province showed that there was a total of 14,113 non-fatal, and 1,415 fatal accidents in 1933 as compared with 15,124 non-fatal and 1,665 fatal accidents in 1932. As in previous years the six factors causing the largest number of fatalities were: automotive vehicles, 403; aquatic hazards, 311; falls, 145; railroads, 80; burns and scalds, 66; fires, 46.

At the annual meeting of the Ontario body addresses were given by the Hon. Leopold Macaulay, provincial Minister of Highways, and Mr. George Hodgson, vice-president of the Ontario Motor League. The latter addressed particularly the motor drivers in his audience and presented safety medals to company drivers who had a year free from accidents. Some 1,200 were eligible and about 300 were present to receive their awards.

Reports of a less detailed nature, but indicating the same general line of safety activity, were presented from the provincial leagues of Quebec, Manitoba, Saskatchewan, and British Columbia.

Among the legislation passed by the New Brunswick Legislature at the session which closed on March 28 were the following Acts: An Act to aid the settlement of disputes between employers and employees in the lumber industry; an Act to promote the production, marketing and distribution of natural products; and an Act to provide for the establishment of a military training area and a forest experimental station. The last-mentioned Act is for the purpose of implementing the work done by the provincial government in the last six months in connection with forestry development in the province, which is assisting to solve the acute problem of unemployment relief for single men.

## FOREST CAMPS FOR UNEMPLOYED YOUNG MEN IN THE UNITED STATES

ON March 21, 1933, President Roosevelt outlined a general plan to help young men who had never had a chance of employment, and at the same time to secure economic advantages to the country. An account of the work of the Civilian Conservation Corps in the United States appears in the February issue of the *International Labour Review*. The work carried on under the scheme during the past year consists mainly of forest conservation and the prevention of soil erosion over wide areas. It includes the following operations: the prevention of forest fires by the construction of fire lines, i.e. cleared strips kept free of inflammable matter so as to divide the forest into separate sections; the construction of roads or trails, with bridges where necessary, so as to make it easier to reach the scene of fires reported by the rangers or look-out men; the installation of telephone lines to enable the look-out men to give rapid warning of fires; the destruction of undergrowth and brushwood which promote the spread of fires and of various diseases; the cleansing of trees attacked by insect pests (especially the gypsy moth) which kill them or prevent their growth; the thinning out of too thickly wooded areas, so that the finest trees may reach their full size; and the planting of a special long-rooted plant (the honeysuckle vine) to fix the soil in places where it has been loosened by rain.

"The work to be done was thus of enormous extent, and had the great advantage, over the random tasks often improvised for the unemployed, that it was both urgent and of prime utility. Moreover, the choice of the younger men for work of this sort meant not only snatching them away from the temptations of the city streets, but also giving them their first chance of entering the cycle of ordered activity, of feeling its discipline, and realizing the value of team work for a useful aim.

"Instead of receiving cash relief and remaining idle, these young men are taken on as regular wage-paid workers; their wages are, it is true, only 30 dollars a month, but in addition they are clothed, fed and housed under canvas in organized camps. It should be added that special arrangements are made for their families to benefit by this employment, for of the 30 dollars only 5 are paid to the worker, the remainder going direct to the home.

"This great scheme was submitted to Congress on March 21, 1933; ten days later the Emergency Conservation Work program was

passed; and on April 5 the President appointed a Director, Mr. Robert Fechner, formerly the secretary of a trade union federation. An Advisory Council consisting of representatives of the Secretaries of War, the Interior, Agriculture, and Labour was formed, and immediate steps were taken to provide the new organization with the funds it would require. The President reserved the right of personal approval in questions affecting the size of the camps and the scope of the work to be undertaken.

"On April 10, a first contingent of 2,500 men was enrolled, and on April 18 the first camp was opened at Luray (Virginia), in the George Washington National Forest. An idea of the speed with which the scheme grew may be obtained from the fact that the number of men enrolled had risen to 274,375 by May 12 and to 314,000 by the end of September. This modern Grand Army received the name of the Civilian Conservation Corps, and is usually known, according to the fashion for abbreviation, as the C.C.C.

"Men are taken on for six-monthly periods, but are free to leave the camp if they can find themselves jobs in industry. The authorities announced in September that 37,000 had left the camps for this reason as a result of an improvement in economic conditions. At the end of the six months the men may sign on again or go home; in all cases when a contingent has finished its period a new recruiting campaign is undertaken in order that the supply of labour may be continuous. It was announced towards the end of the autumn that some of the camps in the northern regions would be gradually closed and the occupants transferred to camps further south where the winter is less rigorous.

"The Civilian Conservation Corps is composed mainly of young men from 18 to 25 years of age; older men with special knowledge of forestry work, who are engaged in order that the campers may have the necessary technical direction, number only 25,000. Further, since the need for afforestation is particularly great in the Indian Reservation, 14,000 Indians have also been taken on for this purpose. Lastly, to satisfy the demands of the war veterans' associations, 25,000 ex-service men have also been given a place in this great army of workers, with the condition that they are to have their own organization and their own camps.

"On a basis of 200 men per camp, the number of camps at the end of August was 1,440 (1,446 in September), 1,301 for unemployed young men and 139 for ex-service

men. Each camp has about 15 woodsmen whose duty it is to give the campers the benefit of their special knowledge and experience and teach them how to work and how to adopt safe methods in operations,

which may be dangerous. Each camp is planned so as to be self-contained, like a military unit, having in it men who can do all the various jobs needed by a community of this sort (cooks, barbers, etc.)."

### Camp Regulations in Saskatchewan

Amendments to the Regulations under the Public Health Act for the sanitary control and prevention of communicable disease in sawmill, lumber, mining and construction camps in Saskatchewan were published in the *Saskatchewan Gazette*, March 15, 1934. The original regulations were summarized in the *LABOUR GAZETTE*, December, 1928, page 1339. They contain general rules governing the site of camps, purification of water, sleeping quarters, water facilities, cook houses, medical care, hospitals, and posting of regulations; they provide that the Minister of Public Health must be notified of the establishment of camps; the employer is required to furnish medical attendance and may deduct not more than one dollar from the wages of each employee for such service; the employer is liable for hospital maintenance to the extent of \$2.50 per day for an employee in hospital; and the penalty for violation of the regulations is not less than \$5 and not more than \$100.

Section 20 of the original Regulations contains the provisions in respect of medical care. This section is now amended by the following subsections (1) and (2).

(1) Every employer shall contract with one or more legally qualified medical practitioners for the medical and surgical care of his employees, except such medical aid for injuries as is provided under The Workmen's Compensation (Accident Fund) Act, and for the payment of such services may deduct from the pay of each employee a sum not exceeding three cents for each day on which such employee has been in camp, provided that the total deduction for such services from any employee shall not exceed 75 cents per month. All sums so deducted shall be paid to the medical practitioner or practitioners, without rebate or deduction. Every such practitioner shall supply medical attendance and medicine to the employees.

(2) If an employee is discharged or sent from camp as the result of sickness, the owner shall be liable for his maintenance in hospital or elsewhere to the extent of \$2.50 per day during the period of his illness, except in cases in which medical aid for injuries is provided under The Work-

men's Compensation (Accident Fund) Act, and for any expense incurred in his removal to the hospital or other place of treatment.

Section 23, also, is amended by the addition of the words "in addition to the first aid requirements of the Workmen's Compensation Board," the section as amended reading as follows:—

23. The owner of every camp shall, in addition to the first aid requirements of the Workmen's Compensation Board, provide a suitable and sufficient supply of bandages, dressings and other requisites and also a supply of such medicines as the medical practitioner in charge prescribes for use in case of sickness.

### Young Citizens' Association Movement in New South Wales

Thirty-five local associations of the Young Citizens' Association Movement were formed in New South Wales during 1933. The total membership of all the associations was approximately 3,200 at that date. Employment for about 600 boys and girls was found through the instrumentality of the associations; and arrangements were made for 52 members to undergo a three months' course of training at the Government Agricultural Farm at Scheyville with a view to their absorption in rural employment. Classes were conducted in the subjects of: Boys—radio, carpentry, motor engineering, ticket writing, shorthand and typing, accountancy, electrical engineering, first aid, mechanical drawing, physical culture. Girls—toy making, dressmaking, nursing, elocution, craft work, millinery, cooking, physical culture.

The amount expended by the Government for the payment of organizers' salaries, purchase of tools and materials, and for other expenses up to end of December, 1933, totalled £3,000. The amount raised by voluntary effort was £800.

Other activities of the associations, including the holding of social functions, the formation and control of local libraries, and arrangement of sport programs, were further developed with satisfactory results.

## BUILDING INDUSTRY CODE IN THE UNITED STATES

A CODE similar to that under the National Recovery Act in the United States for general contractors in Ontario, was suggested to the Labour Committee of the Ontario Legislature on March 23 by Mr. W. H. Yates, president of the Canadian Construction Association as a means of reducing "chiselling" in contracts for public works, which ultimately may affect the wages paid the labouring man. He strongly favoured licensing of all general contractors.

The Code of Fair Competition submitted to the National Recovery Administration on August 7, 1933, by the Construction League of United States was approved by President Roosevelt on January 31, 1934. The Code, which was the 246th to be approved by the President, became effective on February 25, 1934. It constitutes a master code to which special sections will be added for the different branches of the industry.

The Code provides for the fixing for the whole country or for specified regions or localities of maximum hours of work, minimum rates of pay and other conditions of working by means of collective bargaining and agreements between truly representative groups or associations of employers and workers. The conditions laid down by such agreements, after approval by the President, shall become the standard of hours of labour, rates of pay and other conditions of employment.

In regions or localities where no such mutual agreement has been approved, the Code fixes the maximum weekly hours of work for labourers and accounting, clerical and office employees at 40 in the week, subject to the right to raise this maximum to 48 in certain specified circumstances as in cases where the building works are so remote and inaccessible that camps are necessary for housing the workers employed, or in cases where working time has been lost through bad weather or where a sufficient amount of qualified labour is not available in the immediate vicinity of the work. The following are exempted from the maximum hourly provisions of the Code; employees engaged in professional, executive or supervisory work; employees in establishments employing not more than two persons in towns of less than 2,500 population not being part of a larger trade area; those engaged in emergency work involving breakdowns or protection of life and property; watchmen; and others who may be

exempted in the chapters of the Codes specifically applicable only to the divisions or subdivisions of the industry therein defined.

The critical position of the building industry has prevented the Administration from applying in the determination of hours of work the principle by which it is usually guided, and which leads it to reduce hours of labour so far as possible to the extent necessary to absorb unemployed workers ordinarily engaged in the industry. The 40-hour week is, however, considered as a first step, and the parties concerned are called upon to consider the matter of further reduction. The minimum wage for accounting, office and clerical employees varies from 12 dollars to 15 dollars a week according to the population of the towns in which they are working. For labourers the minimum rate is 40 cents an hour; this may not be construed to authorize reduction in the existing rates of pay. The Code also prohibits reclassification of staff for the purpose of evading its provisions, and fixes the minimum age for admission to the industry at 16.

Side by side with the committee in charge of the general administration of the Code is established the most comprehensive Planning Board yet set up under the National Recovery Administration. The National Construction Planning and Adjustment Board will consist of ten persons to be selected by the Construction Code Authority and ten persons selected by the Labour Advisory Board from nominations of the workers' Organizations. A disinterested chairman will be selected by the President on the recommendation of the Administrator of Industry and will have the right of veto so as to prevent any possibility of abuse. This Board will have authority to establish subsidiary regional boards to be known as Regional Construction Planning and Adjustment Boards and providing equal representation of employers and employed.

According to the Administrator, the Code gives to the construction industry for the first time the power of co-ordinated action which may be used to check the violent fluctuations in volume of construction, ranging from 100 per cent above to 50 per cent below normal requirements, and to work towards stabilization based on demand; to unify the industry locally, regionally and nationally for self-government; and to provide unity of action in meeting national emergencies.

### Civil Works Administration in United States

In order to speed up the employment program in the United States the Civil Works Administration was created early in November with the purpose of providing immediately "regular work at regular wages" for able-bodied unemployed persons on work relief. This action was taken, not as a permanent policy nor to provide permanent employment, but to meet the emergency.

The *Monthly Labour Review* (Washington), February, 1934, reports that on November 25, 1933, at the end of the first week of operation, employment had been provided for 1,183,267 persons in 44 States and the District of Columbia, and an effort was being made to provide work for some 4,000,000 persons by the end of the year. In the northern tier of States, where 130,000 had been employed on work relief, by the middle of November there were 425,000 men and women working on civil-works projects. By January 18, 1934, the civil-works program was providing employment for 4,039,474 persons.

The work is not to be limited to those receiving relief. Half of the jobs are to be given to persons not on relief. The work being undertaken includes a variety of activities, such as the extension of sewer systems, building of bridges, widening of roads, cleaning out of slum areas, sanitary projects, malaria-control work, rebuilding and repairing of schoolhouses, construction of playgrounds and swimming pools, planting of trees, and traffic surveys. Other projects authorized include farm-housing survey, production of objects of art (pictures, sculptures, etc.), renovating of buildings to be occupied by transients under Federal care, collection of statistical data (on employment, payrolls, tax delinquency, prices of commodities purchased by farmers, etc.), archaeological work, protection of water supplies, sealing of abandoned coal mines, etc.

It is the policy that "all persons employed on civil-works projects shall be paid just and reasonable wages, which shall be compensation sufficient to provide, for the hours of labour as limited, a standard of living in decency and comfort." Accordingly, on December 15, 1933, the Federal Civil Works Administrator issued regulations governing the rates to be paid for the various classes of work.

The weekly base rates range from \$12 in the southern zone to \$18 in the northern

zone, the intermediate rates from \$15 to \$21, the rates for operating supervisory jobs from \$18 to \$24 per week, and those for technical supervisory jobs from \$18 to \$45 per week. For construction work the rate for unskilled labour ranges from 40 to 50 cents per hour and that for skilled labour from \$1 to \$1.20 per hour. The rates for semi-skilled labour depend on local custom but must be between the skilled and unskilled rates. If the prevailing local union scale exceeds these rates, the union rate is to be paid. In case of dispute as to what is the prevailing rate, the United States Department of Labour may be called upon to decide.

The hours of labour are limited to 8 per day and 30 per week, except in the case of clerical employees who may work up to 39 hours and persons employed at remote and inaccessible places who may work up to 40 hours per week.

Labour for the projects is to be obtained from employment agencies designated by the United States Employment Service. Union members are not required to register at such employment agencies but are to be secured through the local unions of their craft. The employment of persons under 16 and of convicts on civil-works projects is forbidden, as is also the use of any materials produced by convict labour. A board of labour review is created to hear all issues arising in connection with the civil-works program and projects.

The City of Calgary proposes to turn over to the Alberta Relief Commission a fire-proof apartment block in East Calgary, known as the Haskins Block. If the commission will carry out necessary repairs to the building and make it suitable for dormitory purposes, the city will waive rent and in addition will supply free light, heat and water. The building would be used to house 100 single unemployed men classed as "unemployable" and suffering from incurable diseases, or crippled or too old to work. The Hon. O. L. McPherson, provincial Minister of Public Works, in a letter to the city, said that certain recommendations had been made to the government by the Alberta Relief Commission in connection with the proposal. He pointed out that as the majority of the men were unemployable and would no doubt revert to the position of city charges if the present industrial depression ended, he wanted to be assured that the province would not be saddled with the permanent care of the men when normal conditions returned.

## THE RELIEF ACT, 1934

**T**HE Hon. W. A. Gordon, Minister of Labour, introduced in the House of Commons, on March 22, a measure respecting relief measures in Canada, generally similar in its terms to the Relief Act, 1933 (LABOUR GAZETTE, April, 1933, page 402), and also making provision for the payment of the federal proportion of delayed relief accounts, if any, which may be received subsequent to March 31, 1934, the date of the expiration of last year's Act. The text of the Act is as follows:—

### AN ACT RESPECTING RELIEF MEASURES

Whereas the Provinces may require further assistance in carrying out necessary relief measures and in meeting financial conditions as the same may arise; and whereas in such event it is in the national interest that Parliament should support and supplement the relief measures of the Provinces and grant them financial assistance in such manner and to such extent as the Governor in Council may deem expedient; and whereas it is necessary to make provision for further expenditure for relief purposes under the Department of National Defence and the Department of the Interior; and whereas for these and similar purposes the powers necessary to insure the speedy and unhampered prosecution of such relief measures and the maintenance of the credit of the Dominion and the Provinces thereof should be vested in the Governor in Council; Now, therefore, His Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:—

1. This Act may be cited as The Relief Act, 1934.

2. Notwithstanding the provisions of any statute or law the Governor in Council may, upon such terms and conditions as may be agreed upon, enter into agreements with any of the Provinces respecting relief measures therein; grant financial assistance to any Province and to Canadian Co-operative Wheat Producers Limited by way of loan, advance, guarantee or otherwise; and in respect of such loans, advances and guarantees, may accept such security, enter into such agreements and generally do all such acts and things as the Governor in Council may deem necessary and expedient in the public interest;

3. In addition to the powers conferred under the provisions of any statute or law the Governor in Council may, when Parliament is not in session, take all such measures as in his discretion may be deemed necessary or advisable to maintain, within the competence of Parliament, peace, order and good government throughout Canada; and at all times to take all such measures as in his discretion may be deemed necessary or advisable to protect and maintain the credit and financial position of the Dominion or any Province thereof.

4. Without restricting the generality of the terms of the next preceding section hereof and

notwithstanding the provisions of any statute or law, the Governor in Council may,—

- (a) Provide for special relief, works and undertakings under control and direction of the Department of National Defence and the Department of the Interior;
- (b) Take all such other measures as may be deemed necessary or advisable for carrying out the provisions of this Act.

5. The Governor in Council may pay out of the Consolidated Revenue Fund such moneys as may be necessary for all or any of the purposes of this Act.

6. The Governor in Council shall have full power to make all such orders and regulations as may be deemed necessary or desirable to carry out the purposes and intention of this Act.

7. All orders and regulations of the Governor in Council made hereunder shall have the force of law and may be varied, extended or revoked by any subsequent order or regulation; but if any order or regulation is varied, extended or revoked, neither the previous operation thereof nor anything duly done thereunder shall be affected thereby, nor shall any right, privilege, obligation or liability acquired, accrued, accruing or incurred thereunder be affected by any such variation, extension or revocation.

8. All orders in council and regulations made under the provisions of this Act shall be laid before the House of Commons forthwith after the making thereof if Parliament is then sitting, or if not, said orders in council or regulations or an abstract thereof disclosing their essential provisions shall be published in the next following issue of the *Canada Gazette*.

9. A report shall be laid before Parliament within fifteen days after the expiration of this Act, or if Parliament is not then in session, shall be published and made available for distribution by the Department of Labour, containing a full and correct statement of the moneys expended, guarantees given and obligations contracted under this Act.

10. The Governor in Council may pay out of the Consolidated Revenue Fund any accounts in respect of the Dominion contributions towards direct relief for the fiscal year 1933-34 which may be received after the thirty-first day of March, 1934, notwithstanding that by the payment of the said accounts the total amount paid for that purpose for the fiscal year ending the thirty-first day of March, 1934, may exceed the sum of twenty million dollars as fixed by section four of chapter eighteen of the statutes of 1932-33.

11. This Act shall expire on the thirty-first day of March, 1935, but any obligation or liability incurred or created under the authority of this Act prior to the thirty-first day of March, 1935, together with any liability for expenditures after that date for projects required to be completed in order to preserve the value of work already done may be paid and discharged out of the Consolidated Revenue Fund at any time prior to the first day of July, 1935.

## THE RELIEF ACT, 1933

### Report of the Dominion Commissioner of Unemployment Relief

IN conformity with the section 8 of the Relief Act, 1933, a report on operations under the Act during the fiscal year has been laid before Parliament. The administration of the Act is vested in the Minister of Labour, Mr. Harry Hereford being Dominion Commissioner of Unemployment Relief. The following paragraphs are taken from the report.

In accordance with the views of the provinces as expressed at the Dominion-Provincial Conference of January, 1933, the Dominion Government has continued to assist the provinces in the discharge of their constitutional obligations on the basis of the provinces dealing with the present unprecedented economic conditions by distribution of Direct Relief, and the Dominion, as will be seen from the details set forth in this report, in line with the views of the provinces, resuming the policy of contributing to provincial and municipal works when requested by the provinces. This policy was in effect in 1930 and 1931 but was largely dropped in 1932 at the expressed request of the provinces.

The Dominion has continued to contribute to the expenditures made by the four western provinces in connection with the care of homeless unemployed persons, in addition to the provision made for the care of such persons through the projects carried on by the Department of National Defence in all the provinces except Prince Edward Island, and by the Department of the Interior in the National Parks of Canada.

Agreements were entered into with all the provinces with regard to expenditures for direct relief and for public works and other undertakings. The agreements provided that the provinces would submit to the Dominion for approval by the Minister of Labour, from time to time, a schedule or schedules setting forth the list of public works and undertakings proposed to be carried out by the provinces, and/or the municipalities under the provisions of the agreements. Copies of the agreements have been laid before Parliament.

The Relief Act, 1933, authorized the continuation and expansion of projects inaugurated under The Relief Act, 1932, by the Department of National Defence for the purpose of affording relief to single homeless men. The numbers cared for month by month on these projects are given in Appendix "C." These projects were located in every province, except Prince Edward Island where the problem of the homeless man has not been

serious. The class of work done included clearing and grading of landing fields, forestry work, road construction, and other work that could be economically carried out for the general advantage of Canada. The report contains a map of the Dominion, showing the location of unemployment relief projects under the Department of National Defence as at March 31, 1934. The men were provided with food, accommodation, clothing, a free issue of tobacco, an allowance of twenty cents per day and in addition, necessary medical, dental, and hospital attention.

Continuation of works carried on by the Department of the Interior in the National parks, and on the Golden-Revelstoke Highway, for the relief of single homeless unemployed men, was authorized under The Relief Act, 1933. Provision was also made for the relief of needy permanent residents of the parks. Of the works carried on in connection with the camps administered by the National Parks Branch of the Department of Interior, road construction operations were of major importance. By agreement between the Federal Government and the Province of British Columbia, the Dominion, as represented by the Department of the Interior, carried on construction operations on the east leg of the Big Bend or Golden-Revelstoke Highway, which forms a portion of the Trans-Canada Highway. Work was continued in connection with the construction of the Banff-Jasper Highway, which is one of the most important development projects undertaken in the National Parks in recent years, and which when completed will form a direct north and south connecting line between Banff and Jasper National Parks. Work was carried out on entrance and internal highways at Prince Albert National Park in Saskatchewan and Riding Mountain National Park in Manitoba.

In addition to the road projects referred to, numerous other useful works were carried on, such as construction and improvement of recreational areas, and camp ground extensions and improvements, reclamation of low land, underbrushing and clearing, and erection of structures. Works were carried out in the Kootenay and Yoho National Parks in British Columbia, in Banff, Jasper, Elk Island and Waterton Lakes Parks in Alberta, in Prince Albert Park in Saskatchewan and in Riding Mountain Park in Manitoba.

The numbers of men cared for each month under these arrangements are shown in Appendix "C," and the map of the Dominion

in the report shows the location of unemployment relief projects under the Department of the Interior as at March 31, 1934.

Table No. 1 shows the approved Dominion commitments for the various projects and undertakings, exclusive of Direct Relief, authorized under The Relief Act, 1933, and the Dominion disbursements in respect to these and to Direct Relief as at March 31, 1934.

It may be mentioned that the accounts paid do not necessarily represent the total expenditures made by the provinces and municipalities to date, as frequently several weeks and in some cases months elapse before certified accounts are received in the Department of Labour.

Appendix "C" shows the combined expenditures of the Dominion, provinces and municipalities by months and the numbers receiving relief to February 28, 1934, later figures not being available at date of this report.

By Order of the Governor in Council dated September 30, 1932 (P.C. 2163) the Auditor General was authorized to conduct such audit of Provincial accounts, in connection with unemployment relief expenditures, as he deemed necessary to safeguard the interests of the federal treasury, and to investigate provincial systems of auditing municipal relief accounts to the end that the Dominion Government may be satisfied that the municipal accounts put forward by the Provinces are in accordance with the agreements entered into between the Dominion Government and the provinces. As a result of his investigations of provincial audits of municipal accounts the Auditor General reported to the Minister of Labour that in his judgment many of the provincial audits were not of the kind and character which would satisfy him and the Federal Government that the municipal accounts put forward by the provinces were in accordance with the agreements entered into between the Dominion Government and the provinces. Consequently P.C. 222, of the 12th of March, 1934, was approved by the Governor in Council, which directed the Auditor General to conduct such audit of Provincial and Municipal accounts, in connection with unemployment relief expenditures, as he deemed essential to safeguard the interests of the federal treasury. As a result of the audits made, the Unemployment Relief Branch has, on receipt of the Auditor General's reports, requested of the provinces concerned that certain adjustments and refunds indicated by the Auditor General be made. In many instances the Auditor General did not ascertain the amount recoverable by the Federal Government, although observing that adjustments were necessary. In such cases the amount of the

necessary adjustment has been or is being computed. Amounts totalling \$306,597.05 were specifically mentioned and have been or are being recovered, subject to such satisfactory explanation as the provincial authorities may be able to submit.

In addition to the audits made by the Auditor General, inspectors of the Department of Labour have conducted investigations and the provincial officials have also carried out inquiries which have resulted in refunds being made by the provinces to the Dominion to adjust various overpayments.

As a result of Dominion and/or provincial action considered apart from the Auditor General's examinations, the sum of \$422,805.89 has been recovered to date either by cash refunds or deductions from subsequent payments to the province concerned.

The report also refers to the Relief Settlement agreements which were entered into with all the provinces except Prince Edward Island under the Relief Act of 1932. The number of settler families and of individuals approved as at March 31, 1934, and the Dominion contribution as at that date, are also given.

Arrangements were continued with the Canadian Passenger Association whereby a reduced fare was granted on railways from urban centres to relief camps established by the Dominion and the provinces; and for the movement of unemployed farm help from urban centres to farms under arrangements made by provinces, municipalities and farmers, whereby farm help would be given employment. The special rate arranged was one half cents per mile. Arrangements were made with the four western provinces whereby the Dominion Government and the province concerned each paid 50 per cent of the cost of such transportation. Upon termination of employment, providing that the worker remained ninety days or more, a return fare was arranged at the rate of two cents per mile payable by the worker.

Under authority of section 2 (a) of The Relief Act, 1933, the Dominion Government assisted certain of the provinces by way of loans or advances in financing of maturing obligations which the provinces were at the time unable to refinance; also, in order that speedy and unhampered prosecution of the measures instituted to relieve distress and provide employment might be carried out.

The report contains a statement as at March 31, 1934, showing the amounts loaned to provinces under authority of Orders in Council passed pursuant to The Relief Act, 1933, the purpose for which loans were made and renewals of loans outstanding March 31, 1933,

*(Continued on page 347)*

[illegible]

(a) Not including expenditures which may have been made prior to March 31, 1934, but for which accounts have not been received.  
(b) Includes amounts recoverable from Provinces.

Table No. 2 shows a classification of the Direct Relief accounts paid under the Relief Act, 1933, to March 31, 1934, indicating payments and percentages paid under various classifications.

TABLE NO. 2—CLASSIFICATION OF DIRECT RELIEF EXPENDITURES TO WHICH THE DOMINION HAS CONTRIBUTED AS AT MARCH 31, 1934

(Continued from page 343)

less cash repayments and credits applied during the year. All loans are secured by Treasury bills of the province bearing interest at  $5\frac{1}{2}$  per cent to May 1, 1933, and 5 per cent thereafter payable half-yearly.

Certain guarantees given by the Dominion Government under authority of section 2 (a) and (b) of The Relief Act, 1933, are set forth in a statement in the report as at March 31, 1934, supplied by the Department of Finance.

Expenditures made for administration purposes under the Relief Act, 1933, to March 31, 1934, totalled \$82,497.91.

Appendix "D" to the report shows disbursements made by the Dominion Government to March 31, 1934, in respect to expenditures for relief under The Unemployment Relief Act, 1938, Appendix "E" shows disbursements made by the Dominion Government to March 31, 1934, in respect to expenditures for relief under The Unemployment and Farm Relief Act, 1931, and Continuance Act, 1932, Appendix "F" shows disbursements made by the Dominion Government to March 31, 1934, in respect to expenditures for relief under The Relief Act, 1932, and Appendix "G" gives a recapitulation of these disbursements.

The annual report of the Department of Marine for the fiscal year 1932-33 states that navigation schools were in operation at Saint John, N.B., at Halifax and Yarmouth, N.S., at Quebec, P.Q., at Prince Rupert, B.C., and at Kingston, Ont., and marine lectures were delivered at Collingwood, Ont. Examinations for masters' and mates' certificates were held at Halifax and Yarmouth, N.S., at Saint John, N.B., at Quebec and Montreal, P.Q., at Ottawa, Kingston, Midland, Toronto, Owen Sound, Collingwood and Port Arthur, Ont.,

and at Vancouver and Victoria, B.C. There were issued during the year 17 masters', 11 mates' and 21 second mates' sea-going certificates of competency; 48 masters' and 77 mates' coasting certificates of competency; 27 masters' and 46 mates' inland waters certificates of competency; 26 masters' and 8 mates' minor inland waters certificates of competency, and 30 masters' temporary certificates; 25,313 seamen were shipped, and 23,472 seamen were discharged at sea-ports.

## EMPLOYMENT CONDITIONS IN CANADA AT THE END OF MARCH, 1934

### Reports of the Superintendents of the Employment Service

THE employment situation at the end of March, 1934, was reported by the superintendents of the Employment Service of Canada to be as follows:—

Farming in the Maritime Provinces continued to be very quiet, but some maple sugar was being made although the season was backward. Considerable activity was noted as fishermen prepared for the lobster season. Logging, for the most part, was brisk, as the operators were making ready for the spring drives, and many mills were busy with large staffs of workers. Mines in the New Glasgow area worked five days per week, except for one which had not yet resumed work, owing to a wage disagreement. Those in Cape Breton and vicinity operated from two to four days per week. Manufacturers of confectionery and foodstuffs reported business fairly good and various oil companies noted improvement in output, but some slackness was evident in iron and steel, due largely to slow delivery of raw materials. Building construction remained dull, and sewer and street work continued as a relief measure. Passenger and freight traffic was heavy during the Easter season, and movement of coal on railroads from eastern points to northern was also brisk. Trade was somewhat better, with collections fair, and early spring housecleaning resulted in an increased demand for char-workers in the Women's Division.

No orders for farm workers were received in the Province of Quebec, while the majority of logging camps had finished their work until the spring drive. Mining also was quiet. In manufacturing, Hull, Quebec City, Sherbrooke and Three Rivers reported improvement, but in Montreal, although the boot and shoe industries and metal trades were somewhat busier, other lines, including rubber and tobacco, showed slackness, while conditions in the clothing factories were only fair. Building construction appeared to be somewhat brighter, especially at Hull and Rouyn, where a transmission line was being erected. Montreal, however, continued to receive very few orders for building labourers, although there was some demand for mechanics. Transportation was slack, with trade a little more active. Requests for women workers were numerous, but applications were also available in large numbers.

Requests for farm help in Ontario were increasing, although cold weather had held up farming activities in general. Winter operations in logging were about completed, but preparations were being made for the spring

drive which would be the next opportunity for work. The mining group remained very active, with prospects exceedingly good for the spring. In manufacturing, particularly in textiles, clothing and rubber manufacturing, the auto industry, and in the iron and steel group, the general improvement in production and staff levels during the past few months was being maintained, with all indications pointing to continued advancement in output, and subsequent reduction in the total number of unemployed. Building construction remained quiet, and work on highways, streets and sewers continued as a relief measure. Transportation by rail was heavy, but water transportation particularly at Sault Ste. Marie, was held up by the great depth of ice in the river. Orders were many for women workers in the domestic section, while the shortage of cooks-general continued.

In the Prairie Provinces, the demand for farm help remained practically unchanged. Logging activity was only fair, and mining, except at Estevan and Drumheller, where the cold weather had caused a temporary increase in coal orders, was very quiet. Manufacturing industries continued to be slack, with no improvement in the situation. The building construction group also provided little employment, and such work as was available was supplied through the various government relief schemes. Trade, both wholesale and retail, was quiet, with collections slow. The demand for women domestics for casual work was slightly greater in Winnipeg, as was also the call for female help for country points. Orders for the city, however, were slightly lower.

With spring advancing in British Columbia, there were more orders for farm help, and many growers were busy in their orchards, but wages were very low. In some sections of the province the strike in logging continued to affect several thousand men with a resultant loss to the industry. Sawmills, however, were operating and shingle mills were also busy. Mining showed slight improvement, but prospects were likely to be better when the weather improved sufficiently to allow further development. Building construction was at a low ebb, with practically nothing, except relief camps, as an outlet for labour. Shipping and longshore work at New Westminster and Prince Rupert was very good, at Vancouver normal, and at Victoria the best for many weeks. Work at the various shipyards was also active. Trade was fair. No change was reported in the Women's Division, and wages continued low, while a number of female applicants were still on relief.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN FEBRUARY, 1934

THE following information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on March 1 was 8,499, the employees on their payrolls numbering 861,044 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for March was 1,734 having an aggregate membership of 148,048 persons. It should be

understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

### (1) Employment Situation at the Beginning of March, 1934, as Reported by Employers

Reports on employment tabulated by the Dominion Bureau of Statistics show a further improvement in the industrial situation at the beginning of March; 8,499 leading employers throughout Canada enlarged their payrolls from 849,056 on February 1, to 861,044 on March 1, or by 11,988 persons. The experience of the last thirteen years shows that the average change in employment between February 1 and March 1 is a small increase, gains in seven of the years since 1920 rather more than offsetting losses in the remaining six. The advance on the date under review was considerably above the average; it also exceeded that noted on March 1 in any earlier year of the record except 1922, comparing favourably with the declines reported in the last four years. The index, (based on the 1926 average as 100) rose from 91.4 on February 1, 1934, to 92.7 at the beginning of March. On the same date in the preceding thirteen years, the index was as follows:—1933, 76.9; 1932, 88.7; 1931, 100.2; 1930, 110.2; 1929, 111.4; 1928, 102.6; 1927, 97.5; 1926, 92.6; 1925, 88.1; 1924, 91.8; 1923, 91.0; 1922, 82.9 and 1921, 89.1.

The greatest gains at the beginning of March occurred in manufacturing, in which 11,585 additional persons were employed by the co-operating employers; the increases in textiles and iron and steel were most noteworthy, those in the former being the largest recorded on March 1 in the years for which statistics have been compiled. Among the

non-manufacturing industries, there were advances in metallic ore mining, retail trade, transportation and building, highway and railway construction; the gains in the highway group, (amounting to 506 persons), were mainly due to an increase in the numbers at the unemployment relief camps. On the other hand, logging reported considerable declines, marking the completion of the season's operations in many camps; coal-mining and wholesale trade also released employees, but the losses were on a moderate scale.

#### Employment by Economic Areas

The trend of employment was upward in four of the five economic areas, only the Prairie Provinces showing a decline as compared with February 1; the greatest improvement was in Ontario.

*Maritime Provinces.*—There was a further decided advance in employment in the Maritime Provinces, where the 593 reporting employers enlarged their staffs from 71,447 persons on February 1 to 72,868 at the beginning of March. Considerable gains were registered in transportation and construction; there were smaller increases in mining, services and trade, while manufacturing indicated practically no general change, and logging showed a pronounced falling-off. This slowing-up of bush operations was largely seasonal in character. Employment on March 1, 1933, had gained slightly; the index then was many

points lower than on the date under review, when at 103.2, it was the highest recorded since the beginning of 1932.

*Quebec.*—Contrary to the movement on March 1, 1933, employment showed a moderate increase in Quebec on the date under review. This chiefly occurred in manufacturing, where activity gained considerably, especially in leather, textile and tobacco and beverage factories. Heightened employment was also indicated in transportation, building and railway construction and maintenance and retail

change in the years since 1920 has been a moderate increase. The gain at the beginning of March, 1934, was larger than that indicated on March 1 in any other year of the record; it was between two or three times as great as the increase noted on the same date in 1933, when the index, at 79.8, was eighteen points lower. In fact, the March 1, 1934, index (97.8) was higher than in any other month since the end of 1931.

Most of the advance at the beginning of March was in factory employment, manufac-

#### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

*NOTE.*—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

trade. On the other hand, logging was seasonally slacker, and highway construction and maintenance showed a decline, largely representing a reduction in snow-clearing staffs. Statements were tabulated from 2,029 firms, whose payrolls aggregated 241,938 employees, as against 240,421 at the beginning of February. The index, at 89.1 was fifteen points higher than on March 1, 1933.

*Ontario.*—Further expansion was noted in Ontario, where the 3,761 co-operating establishments added 9,244 persons to their forces, bringing them to 370,552 on March 1. The trend of employment at that date in the years for which data are available has not been invariably upward, although the average

turers adding nearly 6,900 workers to their staffs. The iron and steel and textile groups showed the greatest recovery, but leather, lumber, pulp and paper and rubber were also decidedly more active. Among the non-manufacturing classes, metallic ore mining, transportation, retail trade and construction recorded improvement. The increase in construction took place chiefly in the highway division, where 1,706 extra workers were reported, mainly in unemployment relief projects. The completion of the season's operations in some logging camps caused a decrease in bush work; wholesale trade also showed a decline on March 1, 1934.

*Prairie Provinces.*—As is customary in the late winter, there was a moderate contraction in the Prairie Provinces on March 1; while this involved a rather larger number of workers than the reduction recorded on the same date in 1933, it was less than the average loss indicated in the last thirteen years. The index number, at 83.8, compared favourably with that of 80.0 on March 1, 1933. Statistics for the date under review were tabulated from 1,261 firms with 105,053 employees, compared with 106,196 in their last report. Within the manufacturing industry, there were decreases in vegetable food and iron and steel factories, resulting in a decline in the group as a whole; coal-mining and highway construction were also slacker, while logging, railway transportation and retail trade employed a larger number of workers.

*British Columbia.*—Manufacturing, particularly of lumber and non-ferrous metal products, recorded a slight gain, and logging, transportation and highway construction also afforded more employment. On the other hand, coal-mining and a few other groups showed curtailment. The working forces of the 855 co-operating employers aggregated 70,633 persons, as compared with 69,684 in the preceding month. The index, at 85.6, was

considerably higher than on March 1, 1933, when it stood at 67.7; a slight falling-off had then been recorded.

Index numbers of employment by economic areas are given in Table I.

### Employment by Cities

Employment increased in seven of the eight cities for which separate statistics are tabulated—Montreal, Quebec City, Toronto, Hamilton, Windsor and the adjoining Border Cities, Winnipeg and Vancouver showing an upward movement, while in Ottawa contractions were indicated. In all these cities, the index of employment was higher than on March 1 of last year.

*Montreal.*—Further additions to staffs were reported in Montreal; there were gains in manufacturing, (chiefly in leather, textile and tobacco factories), and in retail trade and building construction, but transportation and road construction and maintenance showed curtailment. Statements were tabulated from 1,147 firms employing 121,912 workers, as compared with 119,750 in the preceding month. The tendency on March 1, 1933, was downward, and the index then was lower by nearly seven points.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS  
(AVERAGE CALENDAR YEAR 1926=100)

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia

Feb. 1.....	91.4	101.3	88.5	95.3	84.7	84.1
Mar. 1.....	92.7	103.2	89.1	97.8	83.8	85.6
Relative Weight of Employment by Economic Areas as at Mar. 1, 1934.....	100.0	8.5	28.1	43.0	12.2	8.2

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada by the firms making returns for the date under review.

*Quebec.*—Manufacturing afforded more employment and construction and transportation were also rather brisker, while other industries, on the whole, recorded only small changes. The working forces of the 158 co-operating employers totalled 12,042 persons, compared with 11,565 on February 1, 1934. The index was fractionally higher than on the same date in 1933, when a smaller gain had been indicated.

*Toronto.*—Activity increased in the textile, leather, lumber, vegetable food and iron and steel groups, but there was a decline in electrical apparatus and printing establishments; among the non-manufacturing industries, retail trade showed improvement, while other divisions reported little general change. Returns were received from 1,254 firms, employing 109,644 workers at the beginning of March, as compared with 107,975 on February 1. The index was higher than on March 1, 1933, when a slight falling-off had occurred.

*Ottawa.*—Employment in Ottawa showed a reduction, mainly in construction, while other divisions did not report much change. The 170 co-operating employers reported a total payroll of 12,348 on the date under review, as compared with 12,564 on February 1. The index was higher than at the beginning of

March, 1933; a small decrease had then been noted.

*Hamilton.*—A moderate gain, on the whole, was recorded in Hamilton, small increases in manufacturing, transportation and trade rather more than offsetting losses in services and construction. An aggregate payroll of 25,540 persons was reported by the 254 firms whose returns were tabulated, and who employed 25,488 in their last report. Little general change had also been recorded on the same date of last year, when the level of employment was lower.

*Windsor and the adjacent Border Cities.*—An increase was indicated in the Border Cities, almost entirely in manufacturing, within which marked improvement took place in the automobile and related industries. There were only slight fluctuations in the other groups. Data were received from 153 employers with 13,239 workers, or 928 more than on February 1. Employment was brisker than at the beginning of March, 1933, when smaller gains had been recorded.

*Winnipeg.*—Very little change, on the whole, was indicated in Winnipeg, where 412 firms reported 33,789 employees, as against 33,739 in the preceding month. There was an increase in trade, while transportation, services

Relative Weight of Employment by Cities as at Mar. 1, 1934.....	14.2	1.4	12.7	1.4	3.0	1.5	3.9	3.0

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated city to the total number of all employees reported in Canada by the firms making returns for the date under review.

and manufacturing were rather slacker. Employment was in slightly greater volume than on March 1 of last year, when a similar gain had been registered.

*Vancouver.*—Manufacturing, as a whole, recorded moderate improvement in Vancouver, and transportation was also more active. On the whole, there was an increase of 41 persons in the payrolls of the 364 co-operating firms, who had 26,241 employees. A decline had been indicated on the same date of a year ago, when the index was between three and four points lower.

Index numbers of employment by cities are given in Table II.

### Manufacturing Industries

The trend of employment in this group continued favourable according to statistics furnished by 5,110 manufacturers employing 431,029 operatives, as compared with 419,444 at the beginning of February. The most pronounced recovery took place in textile and iron and steel plants, but leather, lumber, pulp and paper, rubber, non-ferrous metal and some other industries also showed important gains. On the other hand, vegetable food factories were slacker. The general improvement in manufacturing was decidedly greater than that noted on March 1, 1933, and also ex-

ceeded the average increase reported at the beginning of March in the thirteen years for which statistics have been compiled. Reflecting this advance, the index rose from 84.2 on February 1, 1934, to 86.5 on the date under review, as compared with 75.8 on March 1, 1933. After adjustment for seasonal influences, the index also showed an increase.

*Animal Products, Edible.*—Employment in this industry showed a further moderate increase, mainly in meat-packing plants. The index number stood at 96.0, as compared with 88.3 on March 1, 1933, when little general change had been noted. The working forces of the 227 reporting establishments aggregated 17,584 persons, as compared with 17,442 on February 1, 1934.

*Leather and Products.*—There was considerable improvement in employment in this industry at the beginning of March, according to statistics from 260 manufacturers, whose staffs aggregated 19,665 persons, compared with 18,010 in the preceding month. The gains reported were mainly in footwear factories in Quebec, but to some extent also in Ontario. A much smaller increase had also been noted on the corresponding date a year ago, when the index number was thirteen points lower than on the date under review.

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES  
(AVERAGE CALENDAR YEAR 1926=100)

—	All industries	Manufacturing	Logging	Mining	Communications	Transportation	Construction	Services	Trade
Mar. 1, 1921.....	89.1	91.6	147.7	97.1	89.4	88.5	54.7	80.5	91.3

June 1.....	80.7	80.0	40.7	91.4	83.2	79.0	67.8	106.2	109.1
July 1.....	84.5	83.0	49.5	93.1	84.0	80.5	78.2	111.5	111.8
Aug. 1.....	87.1	85.2	48.9	97.4	83.6	81.2	88.4	111.8	110.5
Sept. 1.....	88.5	86.8	48.3	100.4	83.8	82.5	88.4	113.8	111.8
Oct. 1.....	90.4	86.7	64.7	105.8	82.5	82.7	97.0	108.1	115.0
Nov. 1.....	91.3	86.5	110.3	109.7	81.1	81.4	94.6	107.9	115.6
Dec. 1.....	91.8	84.4	166.5	105.5	81.0	79.8	94.6	108.8	119.1
Jan. 1, 1934.....	88.6	80.0	168.8	106.8	78.4	76.3	88.1	109.8	122.3
Feb. 1.....	91.4	84.2	174.0	109.4	76.8	76.2	98.0	108.7	111.6
Mar. 1.....	92.7	86.5	153.3	108.9	76.7	78.0	100.8	109.3	112.5
Relative Weight of Employment by Industries as at Mar. 1, 1934.....	100.0	50.1	5.0	5.8	2.3	10.7	13.6	2.6	9.9

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada by the firms making returns for the date under review.

*Lumber and Products.*—Improvement was indicated in sawmills, container, vehicle, wood-turning and carving and other wood-using factories. Statements were tabulated from 781 employers, whose staffs totalled 31,067 workers, compared with 29,796 in the preceding month. The tendency was favourable in all five economic areas. The index number was decidedly higher than on March 1, 1933, when only a slight increase had been reported.

*Plant Products, Edible.*—A small decrease was recorded in the edible plant product group, chiefly in sugar and syrup and flour and cereal mills, while bread and bakery factories were busier. The firms making returns to the Dominion Bureau of Statistics, 408 in number, had 25,127 workers in their employ, or 255 fewer than at the beginning of February. The Prairie Provinces showed most of the loss. A larger decline had been

recorded at the beginning of March last year, when the index number stood at 87.3, compared with 88.0 on the date under review.

*Pulp and Paper Products.*—Employment in this division showed an improvement, chiefly in pulp and paper mills and paper products, while the printing and publishing divisions reported little general change. A combined working force of 53,143 persons was recorded by 563 co-operating manufacturers, who had 52,610 employees on February 1. The situation was more favourable than in the late winter of 1933, when a smaller gain had been noted. The largest increase on the date under review took place in Quebec and Ontario, while the Maritime and Prairie Provinces showed curtailment in this group.

*Rubber Products.*—A decided improvement in employment was recorded in rubber factories, 49 of which employed 11,594 workers, as compared with 11,062 in their last report.

TABLE IV. INDEX NUMBERS OF EMPLOYMENT IN MANUFACTURING (AVERAGE 1926=100)

Industries	Relative Weight	Mar. 1, 1934	Feb. 1, 1934	Mar. 1, 1933	Mar. 1, 1932	Mar. 1, 1931	Mar. 1, 1930	Mar. 1, 1929
<i>Manufacturing—</i>	50.1	86.5	84.2	75.8	87.0	97.6	110.9	115.7

Other textile products.....	1.1	90.6	84.2	73.7	83.2	89.0	104.1	110.3
Plant products (n.e.s.).....	1.8	120.2	119.2	117.4	120.9	114.6	121.5	121.9
Tobacco.....	1.1	119.9	116.5	124.2	121.1	105.4	111.3	111.4
Distilled and malt liquors.....	.7	120.5	122.6	106.8	120.0	127.7	137.9	138.6
Wood distillates and extracts.....	.1	141.4	142.2	108.6	113.5	122.4	171.9	152.9
Chemicals and allied products.....	1.0	116.1	113.2	104.7	109.6	118.9	118.8	112.9
Clay, glass and stone products.....	.7	55.5	55.4	48.2	76.0	95.4	104.8	107.7
Electric current.....	1.5	104.7	103.6	106.7	116.0	118.4	124.8	116.5
Electrical apparatus.....	1.2	97.5	97.6	88.1	123.1	136.2	157.8	130.4
Iron and steel products.....	10.7	70.5	68.2	59.3	74.9	96.0	117.2	132.1
Crude, rolled and forged products.	1.2	83.1	81.9	39.6	67.0	106.8	130.5	141.4
Machinery (other than vehicles)...	.9	71.1	69.5	63.3	81.8	99.8	129.4	127.1
Agricultural implements.....	.5	44.1	41.8	33.1	32.4	45.8	84.3	125.3
Land vehicles.....	5.2	74.6	72.5	68.8	80.7	97.0	113.3	134.8
Automobiles and parts.....	1.6	96.2	87.3	69.3	74.8	94.4	137.7	194.9
Steel shipbuilding and repairing.....	.2	45.4	47.0	57.5	65.8	98.5	140.8	112.8
Heating appliances.....	.4	82.1	68.3	58.6	73.2	87.0	108.8	132.1
Iron and steel fabrication, n.e.s.....	.4	50.6	51.5	45.0	83.2	146.7	173.3	173.2
Foundry and machine shop products.....	.4	70.7	68.8	55.1	74.2	97.3	112.7	134.6
Other iron and steel products.....	1.5	70.2	66.9	57.9	76.8	91.0	112.5	111.9
Non-ferrous metal products.....	1.8	99.7	97.5	77.4	95.9	116.7	134.4	135.3
Non-metallic mineral products.....	1.5	128.3	127.1	114.1	116.2	122.6	142.4	126.3
Miscellaneous.....	.5	102.8	102.5	91.9	100.4	105.7	110.7	112.1

The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

The index number was higher than on March 1, 1933, when a similar advance had been indicated.

*Textile Products.*—Increases were registered in this group, chiefly in garment and personal furnishings, headwear, cotton and knitting factories; the level of employment was higher than that reported on March 1, 1933, when considerably less extensive gains were noted. The payrolls of the 866 co-operating establishments aggregated 90,210 persons, as compared with 86,535 on February 1, 1934. All provinces showed improvement, that in Quebec and Ontario being most pronounced.

*Tobacco, Distilled and Malt Liquors.*—Gains in employment were noted on March 1 in tobacco factories, while other divisions showed only slight changes. The index number in the tobacco and beverage group, standing at 120.2, was some three points higher than on the same date of a year ago. Data were received from 158 firms employing 15,600 workers, or 175 more than in their last report.

*Clay, Glass and Stone Products.*—There was very little change in building material plants, in which the situation was better than at the same date in 1933. Statements were compiled from 186 manufacturers with 6,077 employees, as against 6,148 in the preceding month.

*Electric Current.*—Employment in plants producing electric power showed a slight gain, according to the 96 co-operating firms who employed 13,150 workers, compared with 13,039 on February 1. Most of the increase was in Quebec. The index number, at 104.7, was two points lower than on March 1, 1933, when little general change had occurred.

*Electrical Apparatus.*—Employment in electrical appliance was practically the same as in the preceding month; 108 factories reported 10,633 persons on their payrolls. Curtailment had been indicated at the beginning of March, 1933, when the index number was over nine points lower.

*Iron and steel Products.*—Continued advances were reported in the iron and steel industry, in which employment was in much larger volume than in the early spring of 1933. Automobile factories registered the greatest increases, but there was also an upward movement in heating appliance, iron pipe, machinery, agricultural implement, foundry and machine shops and other plants. Returns were tabulated from 789 establishments having 92,414 persons in their employ, or 3,056 more than in the preceding month. The most noteworthy expansion was in On-

tario; improvement was also noted in the Maritime Provinces and Quebec, while the tendency was downward in the Western Provinces.

*Non-Ferrous Metal Products.*—Lead, tin, zinc and copper works showed heightened activity, while other non-ferrous metal plants reported little general change; 147 firms had 15,717 workers on their payrolls, as against 15,320 at the beginning of February. The additions to staffs were made in Quebec, Ontario and British Columbia. The level of employment was higher than on March 1, 1933, when a smaller gain had been indicated.

*Mineral Products, n.e.s.*—Statistics tabulated from 116 employers showed a slight gain in their forces, which were enlarged from 12,700 on February 1 to 12,861 at the beginning of March. A small decline had been recorded on the corresponding date a year ago, when the index number was some fourteen points lower.

### Logging

Marked seasonal contractions were noted in logging camps, in many of which the season's operations were almost completed, while work in others was hampered by the unusually deep snow; 297 firms had 42,737 men in their employ, or 5,410 fewer than in their last report. The decline involved a larger number of workers than that recorded at the beginning of March a year ago, but the index then was 57.1 compared with 153.3 on the date under review.

### Mining

*Coal.*—Employment in the mining of coal showed a reduction; improvement in the Maritime Provinces was more than offset by a seasonal falling-off in the Western coal fields. One hundred operators decreased their labour forces from 26,141 persons on February 1, to 25,535 at the beginning of March, 1934. A gain was indicated on March 1, 1933, but the index number was then several points lower.

*Metallic Ores.*—There was an upward trend in employment in this group on the date under review. Data were received from 85 mines employing 19,379 workers, as against 19,110 at the beginning of February. The index stood at 163.7, as compared with 134.2 on March 1, 1933, when a smaller gain had been recorded.

*Non-Metallic Minerals (Other than Coal).*—Practically no general change was registered in these industries, according to statistics from 76 employers having 4,834 persons on their payrolls. A decrease had been noted on March 1 a year ago, when the index was lower.

### Communications

Smaller reductions in personnel were indicated on telephones and telegraphs; returns were received from 81 companies and branches with 20,152 employees, compared with 20,218 in the preceding month. A slight decline had also been registered on March 1, 1933, when the index was higher.

### Transportation

*Street Railways and Cartage.*—Statistics were tabulated from 191 employers in this division, whose staffs included 23,965 persons, as compared with 23,811 at the beginning of February. A reduction had been noted on the same date in 1933, when the volume of employment was slightly higher.

*Steam Railways.*—Continued and larger increases were registered in steam railway operation, in which 727 additional workers were taken on by the 101 co-operating companies and divisional superintendents, on whose pay-rolls were 56,382 persons. A loss had been indicated on March 1 of last year, when the index number was over three points lower. Improvement occurred on the date under review in all provinces except British Columbia.

*Shipping and Stevedoring.*—There was a substantial increase in the shipping and stevedoring group, in which employment was brisker than on March 1, 1933; on the date under review, 90 employers reported a staff of 11,591 persons, or 1,284 more than in the preceding month. Improvement was reported at the Eastern and Pacific ports.

### Construction and Maintenance

*Building.*—There was an increase in building activities at the beginning of March, in which all provinces except British Columbia shared. The 616 contractors furnishing data throughout the Dominion had 14,709 employees, as against 13,893 on February 1. The level of employment was higher than in the late winter of 1933, when a falling-off had been indicated.

*Highway.*—Highway construction registered improvement on March 1, 1934, when 326 employers reported 73,864 workers, as compared with 73,358 on February 1. Gains were indicated in the Maritime Provinces, Ontario and British Columbia, while there were contractions in

Quebec and the Prairie Provinces. Employment in this group was higher than on March 1 in any other year on record, owing to the important unemployment relief projects under way during the present winter, while the severe weather and heavy snowfalls have also occasioned more work than usual in street and highway maintenance.

*Railway.*—Employment on steam railway construction and maintenance showed an increase, according to data received from 33 companies and divisional superintendents employing 28,827 persons, or 1,868 more than at the beginning of February. There were advances in all except the Western Provinces. A smaller gain had been noted at the beginning of March in 1933, when the index was nearly twenty-one points lower. The exceptionally heavy snowfalls have provided employment for many men in keeping the tracks in condition during the last few months.

### Services

A rather larger number of employees was indicated in the service group, in which 402 establishments reported a staff of 22,606, as compared with 22,511 on February 1. Activity was greater than in the same month of 1933, when curtailment in the staffs had been reported.

### Trade

Wholesale trade released employees, but retail stores reported decidedly greater activity. On the whole, there was an increase of 754 in the personnel of the 991 firms furnishing data in the trade group, who had 85,434 employees. The index stood at 112.5 on March 1, 1934, compared with 107.3 at the beginning of March, 1933, when losses had been recorded, as is usually the case in this division in the late winter.

### Tables

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on the date under review.

## (2) Unemployment in Trade Unions at the Close of February, 1934

Unemployment as used in the following article has reference to involuntary idleness due to economic causes. Persons who are engaged at work other than their own trades, or who are idle due to illness, are not con-

sidered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon

which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Some improvement in conditions was evident among local trade unions at the close of February as compared with the preceding month, the reports compiled from a total of 1,734 labour organizations with a combined membership of 148,048 persons showing that 29,568 were without work on the last day of the month, a percentage of 20.0 compared with 21.2 per cent of unemployment in January. There was a distinct rise in available work over February, 1933, when 24.3

employment volume afforded from February, 1933. On the other hand, marked employment recovery was apparent in New Brunswick, Quebec and Ontario during the month reviewed, and advances on a more moderate scale occurred for Saskatchewan and Alberta union members. In Manitoba and British Columbia, the gains were but nominal.

A separate compilation is made monthly of unemployment affecting trade union members in the largest city in each province with the exception of Prince Edward Island. During February, a better employment volume was available to union members in Montreal, Vancouver, Halifax, Toronto, and Winnipeg,

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

per cent of the members reported were idle. British Columbia unions registered a gain in activity of about 4 per cent from January, unemployment in navigation easing up to some extent, and the building trades and fishing industry also showing a more favourable situation. Quebec and Ontario unions indicated employment advances on a small scale, the manufacturing industries in the former province accounting largely for the favourable tendency, while in the latter the improvement was more general. In the remaining provinces the trend was toward lessened activity, though the change in each province was fractional only. Nova Scotia unions alone reported a slight lowering of the

than in the preceding month, though the changes were not outstanding in any one city. On the contrary, Saint John and Edmonton unions reported fair-sized contraction in activity, while in Regina employment showed curtailment of less than one per cent. Compared with the returns for February, 1933, the situation in Saint John, Montreal and Vancouver unions was considerably better during the month reviewed, and in Halifax, Toronto, Regina and Edmonton moderate gains were reflected. Winnipeg unions alone reported minor employment recessions from February last year.

Accompanying this article is a chart which illustrates the trend of unemployment by

months from January, 1928, to date. Contrary to the upward course followed by the curve since the close of October, there was a slight drop in level during February, showing that unemployment was somewhat less prevalent than in the previous month. Industrial activity as shown by the chart was in considerably greater volume than in February last year when the curve stood 4.3 points higher than in the period reviewed.

The 462 organizations reporting in the manufacturing industries during February with an aggregate of 41,625 members showed employment advancement from the previous month, 8,209 members or 19.7 per cent being

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1919.....	3.1	2.0	3.4	2.7	2.1	3.2	2.0	7.9	3.4

without work contrasted with 21.9 per cent in January. Substantial increases, however, were recorded over February, 1933, when the percentage of idleness stood at 25.6. Much better conditions than in January prevailed for leather workers, general labourers, and metal polishers, while among wood workers increases of considerably lesser degree were reflected. A slight employment rise from January was noted also by iron and steel workers and papermakers, while among glass and jewellery workers, and bakers and confectioners the tendency was favourable, though the changes were fractional. On the other hand, textile workers reported moderate declines from January in work available, and among garment and brewery workers, printing tradesmen and cigarmakers the employment losses recorded were very slight. The unemployment percentages registered by hat, cap and fur workers remained identical with those of January. A decidedly better situation than in February a year ago was noted by wood workers, general labourers, cigarmakers, textile and garment workers, and important gains in activity were indicated by iron and steel workers, and paper makers. Employment for printing tradesmen, brewery and leather workers, metal polishers, and bakers and confectioners also increased moderately. A large percentage drop in activity from February last year was recorded by hat, cap and glass workers, whose combined membership, however, was slight, and employment recessions on a small scale occurred for fur workers. Among jewellery workers the same situation prevailed as in February, 1933.

Slight variation was apparent in the labour volume afforded coal miners during February as compared with the previous month, the tendency being less favourable. This was manifest by the returns tabulated from 51 unions, comprising a membership of 14,458 persons, 1,184 or 8.2 per cent of whom were idle at the end of the month, compared with 7.8 per cent in January. Nova Scotia, Alberta and British Columbia miners all participated in this retrogressive movement, British Columbia unions showing moderate curtailment of activity and the other provinces nominal reductions only. There was some falling off in available work also from February, 1933, when 6.8 per cent of the miners reported were idle, Nova Scotia, Alberta and British Columbia as in the previous comparison, all showing a downward employment trend. In addition to the miners reported as entirely out of work short time employment continued rather prevalent.

TABLE II.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

Month	Fishing	Lumbering and Logging	Mining	Manufacturing industries	Vegetable products	Pulp and paper products	Pulp and paper mill workers	Printing, publishing and lithographing	Electric current	Wood products	Textile and carpet workers	Garment workers	Hat, cap and glove workers	Animal products	Iron and its products	Non-ferrous metals	Clay, glass and stone products	Mineral products	Miscellaneous manufacturing industries	Building and construction	Shipping and stevedoring	Steam railway operation	Local transportation	Communication	Telegraph operation	Telephone operation	Trade (retail shop clerks)	Services	Governmental	Miscellaneous	All occupations

October, 1933.....	6.1																														

The building and construction trades afforded the same volume of work during February as in the preceding month, according to the returns tabulated from a total of 217 organizations, with 16,208 members. Of these, 11,208 or 69·2 per cent were idle on the last day of the month as in January. Employment conditions, however, were somewhat better than in February a year ago when 71·7 per cent of the members reported were out of work. Bridge and structural iron workers indicated a considerably higher level of activity than in January, and the situation for painters, decorators and paperhangers, and carpenters and joiners improved slightly. Granite and stone cutters, and plumbers and steamfitters, however, reported noteworthy declines in available work from January, and nominal recessions were apparent among steam shovelmen and tile layers, lathers and roofers. An unchanged employment volume was shown by bricklayers, masons and plasterers, electrical workers, and hod carriers and building labourers from January, conditions for these tradesmen remaining quiet. When compared with the returns in the building trades, as a whole, for February of last year, bricklayers, masons and plasterers, and carpenters and joiners reported employment expansion involving the greatest number of members during the month reviewed, and noteworthy gains were indicated by granite and stone cutters. Hod carriers and building labourers showed little change in the situation from February a year ago though the tendency was also favourable. On the other hand, recessions of rather moderate proportions were recorded among painters, decorators and paperhangers, plumbers and steamfitters, electrical workers, steam shovelmen and tile layers, lathers and roofers.

The transportation industries during February reported heightened activity, both over the previous month and February a year ago, as shown by the returns tabulated from 763 unions with a combined membership of 54,619 persons. Of these, 6,814 or 12·5 per cent were unemployed at the close of the month contrasted with percentages of 13·8 in January and 15·4 in February, 1933. The steam railway division, which constituted about 78 per cent of the entire group membership reported, showed a slightly better employment volume than in January, while the improvement from February last year was substantial. Navigation workers, though still slack, indicated a better situation than in January, but suffered a large falling off in employment from February a year ago. Among teamsters and chauffeurs a fractional unemployment percentage only was recorded in February, while

in the previous month and February, 1933, all members were reported busy. Street and electric railway employees were afforded practically the same volume of work in all three months surveyed.

The 4 unions of retail clerks making returns in February, with 1,700 members, showed that 86 or 5·1 per cent were without work at the end of the month, compared with a fully engaged situation in January, and with an unemployment percentage of 2·0 in February last year.

Activity for civic employees subsided slightly during February from the previous month, though moderate gains were reflected from February a year ago. This was manifest by the returns tabulated from 77 associations of these workers with 7,202 members, 300, or 4·2 per cent of whom were idle at the end of the month in contrast with percentages of 2·1 in January and 7·5 in February, 1933.

Employment in the miscellaneous group of trades remained in much the same volume during February as in the preceding month, the 111 unions from which reports were received with 3,819 members showing that 708 were unemployed on the last day of the month, a percentage of 18·5, compared with 18·6 per cent of inactivity in January. Stationary engineers and firemen, and unclassified workers reported slight improvement from January, which was practically counterbalanced by the employment recessions noted among theatre, stage, hotel and restaurant employees, and barbers. More active conditions prevailed in the miscellaneous group of trades, as a whole, than in February, 1933, when 22·5 per cent of the members reported were idle. In this comparison stationary engineers and firemen, and hotel and restaurant employees were afforded a much better volume of work during the month reviewed, and activity for theatre and stage employees, and unclassified workers also tended upward. Barbers alone reported an employment drop from February last year, which was of moderate proportions.

The 2 unions of fishermen making returns in February with 705 members, showed that 15 or 2·1 per cent were unemployed at the end of the month, compared with 27·0 per cent in January, and with 13·2 per cent in February last year.

An upward employment movement was indicated by lumber workers and loggers during February from the previous month, although the change was slight, the 5 unions from which reports were received with 697 members showing that 138 or 19·8 per cent were idle at the end of the month contrasted with 21·8 per cent in January. There was,

however, a substantial rise in work afforded from February, 1933, when 31·4 per cent of unemployed members were recorded.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1933 inclusive

and also the percentage of unemployment by provinces for February of each year from 1919 to 1931 inclusive, and for each month from January, 1932, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

### (3) Employment Office Reports for February, 1934

The volume of business transacted by the offices of the Employment Service of Canada during the month of February, 1934, as indicated by the average daily placements effected, showed a loss of almost 14 per cent from that of the previous month, but a gain of nearly 27 per cent over February, 1933. The gain and loss under each comparison was

sent by the ratio of vacancies offered and of placements effected for each 100 applications for work registered at the offices of the Employment Service of Canada, computations being made semi-monthly. It will be noticed that the curve of vacancies and of placements in relation to applications declined steadily throughout the month, being at the close of

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o-o-o-o-o-o

largely due to a marked change in placements in construction and maintenance where relief work had been provided by the federal and provincial governments, although substantial declines from January were also shown in services, logging and farming and noticeable gains over the corresponding month last year in logging and manufacturing. Farming and trade recorded slight declines from February a year ago, while changes in other groups under each comparison were small.

The accompanying chart shows the trend of employment since January, 1932, as repre-

February, 1934, about 6 points below that shown at the end of the previous month, but about 5 points above the level attained at the end of February, 1933. The ratio of vacancies to each 100 applications was 59·0 and 54·4 during the first and the second half of February, 1934, in contrast with ratios of 53·6 and 49·5 during the corresponding periods of 1933. The ratios of placements to each 100 applications during the periods under review were 56·3 and 52·7, as compared with 51·6 and 47·3 during the corresponding month of 1933.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during February, 1934, was 1,249, as compared with 1,456 during the preceding month and with 989 in February a year ago.

The average number of applications for employment received daily by the offices during the month under review was 2,207, as compared with 2,633 in January and with 1,914 during February, 1933.

The average number of placements made daily by the offices of the Service during February, 1934, was 1,201, of which 549 were in regular employment and 652 in work of one week's duration or less, as compared with a total daily average of 1,393 during the preceding month. Placements in February last year averaged 948 daily, consisting of 366 placements in regular and 582 in casual employment.

During the month of February, 1934, the offices of the Service referred 30,367 persons to vacancies and effected a total of 28,818 placements. Of these, the placements in regular employment were 13,163, of which 9,958 were of men and 3,205 of women, while placements in casual work totalled 15,655. The number of vacancies reported by employers was 23,748 for men and 6,224 for women, a total of 29,972, with applications for work numbering 52,954, of which 42,444 were from men and 10,501 from women. Reports for January, 1934, showed 37,856 positions available, 68,442 applications made and 36,215 placements effected, while in February, 1933, there were recorded 23,714 vacancies, 45,919 applications for work and 22,733 placements in regular and casual employment.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1924, to date:—

Year	Placements		
	Regular	Casual	Totals
1924.....	247,425	118,707	366,132
1925.....	306,804	106,021	412,825
1926.....	300,226	109,929	410,155
1927.....	302,723	112,046	414,769
1928.....	334,604	135,724	470,328

1934 (2 months).....	30,455	34,578	65,033

#### NOVA SCOTIA

There was a decline of over 24 per cent in the number of positions offered through employment offices in Nova Scotia during

February when compared with the preceding month and of over 78 per cent in comparison with the corresponding month of last year. Similar percentages of decline were reported in placements under both comparisons. The reduction in placements from February of last year was entirely due to fewer workers being sent to relief employment on highway construction, as all other groups showed gains. None, however, were large. Placements in construction and maintenance numbered 590, and in services 281. Of the latter 213 were of household workers. During the month 114 men and 67 women were placed in regular employment.

#### NEW BRUNSWICK

During February orders received at employment offices in New Brunswick called for nearly 5 per cent more workers than in the preceding month, but over 90 per cent more than during the corresponding month of last year. Similar percentages of gain were reported in placements under both comparisons. All industrial divisions, except trade, participated in the gain in placements over February of last year, construction and maintenance showing the largest increase. In this group there were 783 placements and in services 440. Of the latter 318 were of household workers. Placements in regular employment numbered 39 of men and 56 of women.

#### QUEBEC

Orders received at employment offices in the Province of Quebec during February called for nearly 17 per cent less workers than in the preceding month, but over 34 per cent above the corresponding month of last year. There was a decline of 14 per cent in placements when compared with January, but a gain of nearly 48 per cent over February, 1933. Increased placements in services, construction and maintenance and logging were responsible for the gain over February of last year, as improvement in manufacturing and trade was offset by declines in communication and mining. The changes in other groups were nominal only. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 123; logging, 189; construction and maintenance, 317; and services, 1,553, of which 1,267 were of household workers. During the month 619 men and 1,112 women were placed in regular employment.

#### ONTARIO

Opportunities for employment, as indicated by orders received at employment offices in Ontario during February, were 27 per cent

\*436 Placements effected by offices since closed.

less favourable than in the preceding month but nearly 67 per cent better than during the corresponding month of last year. There was a decline of 27 per cent in placements when compared with January, but a gain of over 65 per cent in comparison with February, 1933. A gain in placements over February of last year in construction and maintenance, largely made up of workers sent to relief employment on highway construction, was approximately the same as the increase for the province as a whole. Gains in logging, manufacturing, transportation and farming were offset by declines in services and trade. Placements by industrial divisions included: manufacturing, 475; logging, 629; farming, 320; transportation, 116; construction and maintenance, 9,261; trade, 279; and services, 2,163, of which 1,300 were of household workers. There were 3,377 men and 965 women placed in regular employment.

#### MANITOBA

There was a decline of over 11 per cent in the number of positions offered through employment offices in Manitoba during February when compared with the preceding month, but a gain of nearly 37 per cent in comparison with the corresponding month of last year. Placements were over 16 per cent less than in January, but nearly 43 per cent above February, 1933. Services was the only group to show any decline of importance in placements from February of last year. The increase under this comparison for the province as a whole was due to gains in construction and maintenance, logging and farming. Placements by industrial divisions included: logging, 202; farming, 959; construction and maintenance, 1,286; and services, 463, of which 382 were of household workers. Placements in regular employment numbered 2,250 of men and 285 of women.

#### SASKATCHEWAN

The demand for workers, as indicated by orders received at employment offices in Saskatchewan during February, was nearly 35 per cent less than in the preceding month and nearly 20 per cent below the corresponding month of last year. There was a decline also in placements of 32 per cent when compared with January and of nearly 20 per cent in comparison with February, 1933. Reduced placements in farming and construction and maintenance accounted for the decline from February of last year. These losses were partly offset by gains in manufacturing, services and mining. Industrial divisions in which most of the placements were effected

during the month were: manufacturing, 41; farming, 401; construction and maintenance, 493; trade, 53; and services, 601, of which 407 were of household workers. There were 599 men and 345 women placed in regular employment.

#### ALBERTA

Employment opportunities, as indicated by orders received at employment offices in Alberta during February, were over 32 per cent less favourable than in the preceding month, but over 37 per cent better than during the corresponding month of last year. There was a decline of over 29 per cent in placements when compared with January, but a gain of 42 per cent in comparison with February, 1933. All industrial divisions except farming and transportation showed increases in placements over February of last year, the largest gains being in construction and maintenance and logging. Placements by industrial divisions included: logging, 196; farming, 512; construction and maintenance, 1,083; and services, 328, of which 253 were of household workers. During the month 1,264 men and 219 women were placed in regular employment.

#### BRITISH COLUMBIA

There was a gain of over 10 per cent in the number of positions offered through employment offices in British Columbia during February, when compared with the preceding month and of nearly 74 per cent in comparison with the corresponding month of last year. Placements also were nearly 10 per cent higher than in January and over 72 per cent in excess of February, 1933. The gain in placements over February of last year was almost entirely due to relief work on highway construction, although small increases were also reported in farming and manufacturing. The only decline of importance was in services. Industrial divisions in which most of the placements were effected during the month were: farming, 55; construction and maintenance, 3,563; and services, 517, of which 333 were of household workers. There were 1,696 men and 156 women placed in regular employment during the month.

#### Movement of Labour

During the month of February, 1934, the offices of the Employment Service of Canada made 13,163 placements in regular employment, 5,408 of which were of persons for whom the employment found was outside the immediate vicinity of the offices at which they were registered. Of the latter, 482 were granted the Employment Service reduced

transportation rate, 269 going to centres within the same province as the despatching office and 213 to other provinces. The reduced transportation rate, which is 2.7 cents per mile with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Quebec offices issued 106 certificates for reduced transportation during February, 5 provincial and 101 interprovincial. The former were granted at the Quebec City office to bushmen going to employment within the same zone. The movement outside the province was also of bushmen, despatched from Hull to the Sudbury zone. Transportation vouchers granted by Ontario offices during February numbered 172 and all were for points within the province. Of these, 136 were secured at the Port Arthur office by 130 bushworkers, 2 fishermen, 2 highway construction cookees, one mine labourer and one machinist, who proceeded to situations within the Port Arthur zone. To centres within its own zone Fort William despatched 5 bushmen, 2 bricklayers and one hotel general, this zone also being the destination of one mine blacksmith transported from Timmins and of one highway construction labourer sent from Toronto. The Timmins zone received 8 bushmen from North Bay, one bushman from Hamilton, one stock man from Stratford, one bushman from Sudbury, and 2 carpenters sent by the Timmins office. Travelling from Sudbury one mine cook went to Sault Ste. Marie and 7 bushmen within the Sudbury zone, which zone also received one steel sharpener from North Bay. To Sault Ste. Marie in addition, 4 mine workers were shipped from Timmins. Transfers at the reduced rate from Manitoba centres during February totalled 125, of which 13 were to provincial points and 112 outside the province. All workers travelling within the province were for the Winnipeg zone and included 12 tractor operators and one hotel waitress, these securing their certificates for transportation at the Winnipeg

office. The interprovincial movement was largely to the Port Arthur zone, which received 96 bushmen, one restaurant cook and one cook general from Winnipeg, and 13 bushmen from St. Boniface. From Winnipeg also, one farm hand was conveyed to Estevan. In Saskatchewan, 16 certificates for reduced transportation were granted during February, all provincial. Of these, 15 were issued to teachers, Regina transferring 13, and Moose Jaw one to employment within their respective zones, while from Saskatoon one teacher was sent to Swift Current. In addition, one farm hand proceeded from Moose Jaw to a point within the same zone. Benefiting by the Employment Service reduced transportation rate in Alberta during February, 49 workers journeyed to provincial employment. Forty-six of these were sent by the Edmonton office to centres within its own zone and included 35 bushworkers, 4 sawmill workers, 2 farm hands, one blacksmith, one restaurant cook, one hotel cookee and 2 domestics. On certificates secured at Calgary one farm hand was carried at the special rate to Edmonton, one farm housekeeper to Drumheller and one farm hand within the Calgary zone. Those who availed themselves of reduced rate certificates in British Columbia during February numbered 14 and all were bound for employment within the province. The Vancouver office assisted in the transfer of one miner to Penticton, one saw filer to Nelson and of 3 miners, one mine blacksmith, 2 hotel cooks, one farm hand and one farm household worker within the Vancouver zone. To the Penticton zone also were despatched 3 bushmen from Nelson. In addition, from Prince Rupert one bushman was transferred to employment within its own zone.

Of the 482 workers who were conveyed at the Employment Service reduced transportation rate during February, 182 travelled by the Canadian National Railways, 278 by the Canadian Pacific Railway, 15 by the Temiskaming and Northern Ontario Railway, 5 by the Pacific Great Eastern Railway and 2 by the Northern Alberta Railway.

#### (4) Building Permits Issued in Canada in February, 1934

The value of the building represented by the permits issued by 61 cities during February, as compiled by the Dominion Bureau of Statistics, was higher by \$188,190 or 26.2 per cent than in the preceding month, but was lower by \$44,742 or 4.8 per cent than in February of last year; the total stood at \$881,152 during February, 1934, as compared with \$692,962 in January, 1934, and \$925,894 in February, 1933.

Some 50 cities furnished detailed statistics, showing that they had granted over 100 permits for dwellings valued at about \$229,000, and more than 580 permits for other buildings, estimated to cost in excess of \$590,000. In addition, two engineering projects, valued at \$37,000, were reported. In January, authority was given for the erection of some 40 dwellings and 460 other buildings, estimated at approximately \$136,000 and \$480,000, respectively.

Nova Scotia, Quebec, Ontario, Manitoba, Saskatchewan and British Columbia reported increases in the value of the permits issued as compared with January, 1934; the largest gain, of \$108,850 or 121.5 per cent, took place in Quebec. Of the declines in the remaining provinces, that of \$5,209 or 22.9 per cent in Alberta was most pronounced.

As compared with February, 1933, Nova Scotia, Ontario, Manitoba and Saskatchewan recorded increases, that of \$85,421 or 22.4 per cent in Ontario being most marked; the greatest decrease of \$116,717 or 52.2 per cent was shown in British Columbia.

Of the larger cities, Toronto recorded an increase in the value of the permits issued as compared with January, 1934, and also as compared with February, 1933. Montreal and Vancouver showed increases in the first but reductions in the second instance, while in Winnipeg, there was a decrease as compared with the preceding month, but an increase over February of last year. Of the other centres, Moncton, Quebec, Sherbrooke, Westmount, Belleville, Galt, Kitchener, London, Oshawa, Sarnia, Windsor, East Windsor, Sandwich, Brandon, St. Boniface, Regina, Saskatoon, Lethbridge and Medicine Hat reported improvement in each of these comparisons.

*Cumulative Record for First Two Months, 1934.*—The following table gives the value of the building authorized by 61 cities during February, and in the first two months of each year since 1920, as well as index numbers for

the latter, based upon the total for 1926 as 100. The average index numbers of wholesale prices of building materials in January and February of the same years are also given (1926=100).

Year	Value of permits issued in February	Value of permits issued in first two months	Indexes of value of permits in first two months (1926=100)	Average indexes of wholesale prices of building materials in first two months (1926=100)
	\$	\$		
1934.....	881,152	1,574,114	13.3	83.5
1933.....	925,894	2,111,856	17.8	75.2
1932.....	2,845,271	6,056,283	51.1	79.4
1931.....	6,395,659	14,797,115	124.8	83.8
1930.....	8,919,078	16,136,475	136.1	96.8
1929.....	10,465,330	18,882,210	159.2	99.6
1928.....	10,318,338	18,034,925	152.1	96.4
1927.....	7,638,176	13,314,713	112.3	97.1
1926.....	7,139,549	11,859,083	100.0	102.4
1925.....	5,902,118	11,349,388	95.7	103.2
1924.....	4,093,800	8,554,379	72.1	112.3
1923.....	5,679,671	9,319,169	82.8	110.1
1922.....	4,738,105	8,064,642	68.0	108.3
1921.....	3,683,359	6,278,923	52.9	140.5
1920.....	6,156,287	10,173,311	85.8	137.5

The aggregate for the first two months of 1934 was lower than in the same months of 1933 and earlier years of the record; the wholesale costs of building materials, though slightly higher than in 1933 and 1932, and practically the same as in 1931, were considerably lower in the first two months of the present year than in the months January-February of any other year since 1920.

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

### Great Britain

THE British *Ministry of Labour Gazette*, March, 1934, summarized the employment situation as follows:—

Employment in February showed an improvement as compared with a month before, and was much better than in February, 1933. The improvement during the month was most marked in building and public works contracting, the clothing trades, boot and shoe manufacture, and pottery manufacture. There was also some improvement in a considerable number of other industries, including iron and steel manufacture, engineering, shipbuilding and ship repairing, vehicle building, stone quarrying, and shipping service.

On the other hand, there was a decline in employment in dock and harbour service, and in the jute, tinplate, and glass bottle industries; there was also a small net decline in the

coal mining industry, due to an increase in the numbers temporarily stopped in the North-eastern area.

The improvement during the month was general, except in the Northeastern area of England, where there was little change. In London and the Southeastern counties employment was fair. In the Southwest and Midlands it was moderate. In the North of England and in Scotland it was bad, while in Wales it was very bad. In Northern Ireland it was bad.

Among the workpeople, numbering approximately 12,883,000, insured against unemployment in Great Britain and Northern Ireland and working in practically every industry except agriculture and private domestic service, the percentage unemployed at February 19, 1934 (including those temporarily stopped as well as those wholly unemployed) was 18.2, as compared with 18.7 at January 22, 1934, and

with 22.7 at February 20, 1933. The percentage wholly unemployed at February 19, 1934, was 15.5, as compared with 15.9 at January 22, 1934; while the percentage temporarily stopped was 2.7, as compared with 2.8. For males alone, the percentage at February 19, 1934, was 21.0, and for females, 10.7; at January 22, 1934, the corresponding percentages were 21.6 and 11.0.

At February 19, 1934, the number of persons on the registers of employment exchanges in Great Britain was 1,881,532 wholly unemployed, 340,897 temporarily stopped, and 95,480 normally in casual employment, making a total of 2,317,909. This was 71,159 less than a month before, and 538,729 less than a year before. The total included 1,883,782 men, 58,368 boys, 328,146 women, and 47,613 girls.

In Great Britain and Northern Ireland, the total number of persons on the registers of employment exchanges at February 19, 1934, was 2,383,663.

### United States

*Manufacturing Industries.*—Index numbers showing the trend of employment and pay-rolls in manufacturing industries are computed monthly by the Bureau of Labor Statistics of the U.S. Department of Labor from reports supplied by representative establishments in 89 of the principal manufacturing industries of the United States and covering the pay period ending nearest the 15th of the month. These indexes of employment and pay-rolls are figures showing the percentage represented by the number of employees or weekly pay-rolls in any month compared with employment and pay-rolls in a selected base period. The year 1926 is the Bureau's index base year for manufacturing industries, and the average of the 12 monthly indexes of employment and pay-rolls in that year is represented by 100 per cent.

Factory employment and pay-rolls showed pronounced gains in February as compared with January. There was an increase of 6.1 per cent in employment over the month interval. Pay-rolls increased 12.6 per cent. The index of factory employment in February was 73.5, or 4.2 points above the January index of 69.3. The pay-roll index in February was 55.6 as compared with 49.4 in January.

While increases in both employment and pay-roll are customary in February, due to the resumption of more regular plant operation after the usual January shutdowns for inventory and repairs, the gains of last month were more pronounced than usual. The average increase in employment in February during the past 10 years has been 1.4 per cent,

and the average increase in pay-rolls over the same interval has been 4.7 per cent.

Comparing factory employment in February, 1934, with February, 1933, the employment index for last month was 27.8 per cent above the level of a year ago, when the index was 57.5. The February, 1934, pay-roll index compared with that of February, 1933 (36.4), shows a gain of 52.7 per cent in the amount paid out in factory wages over the 12-month period.

The gains in employment and pay-roll were general, 77 of the 89 manufacturing industries surveyed reporting increased employment in February, and 79 industries reporting increased pay-rolls. In the 12 industries which failed to register gains in employment over the month interval, the decreases were largely seasonal. With the exception of the food group, each of the 14 groups in which the manufacturing industries are classified reported increased employment and earnings over the month interval. The most pronounced gains were shown in the transportation equipment group in which employment increased 18.9 per cent and pay-rolls increased 36.3 per cent.

These employment and pay-roll indexes are based on returns supplied by 18,101 establishments in 89 of the principal manufacturing industries of the United States. These establishments reported 3,273,694 employees on their pay-rolls with combined weekly earnings of \$62,468,826 during the pay period ending nearest February 15. The employment reports received from these co-operating establishments cover approximately 50 per cent of the total wage earners in all manufacturing industries of the country.

In order that the trends of factory employment and pay-rolls may be more accurately reflected, and in order that comparisons may be more easily made with other indexes that portray the course of economic activity, the Bureau of Labour Statistics has made two important revisions in its index. The index has been revised to conform to the figures of the Biennial Census of Manufactures and the base year has been changed. The base has been shifted from the single year 1926 to the three-year average 1923-1924-1925. In succeeding months, this revised series of indexes will be issued in the place of the existing series. The index for February, 1934, in the new series of indexes, on the 1923-1925 base, was 77.7 for employment and 60.6 for pay-rolls, as compared with 73.5 and 55.6, respectively, on the 1926 base.

*Non-Manufacturing Industries.*—Seven of the 16 non-manufacturing industries surveyed monthly by the Bureau of Labour Statistics reported increased employment in February,

1934, as compared with January. The most pronounced gains over the month interval were in the hotel industry, which registered increases of 4.0 per cent in employment and 7.2 per cent in pay-rolls. These gains are due largely to the effect of the N.R.A. codes, the repeal of national prohibition, and increased employment in winter resort hotels. Metaliferous mining showed a pick-up of 1.7 per cent in employment and 2.1 per cent in pay-roll, wholesale trade showed gains of 0.8 per cent and 1.1 per cent, respectively, in employment and pay-roll, and electric railroad and motor-bus operation and maintenance showed gains of 0.7 per cent in employment and 1.5 per cent in pay-roll. The remaining three industries which showed gains in employment were bituminous coal mining (0.4 per cent), canning (0.4 per cent), and banks-brokerage-insurance-real estate (0.2 per cent). The gains in pay-roll in the two first-named industries were 6.4 per cent and 5.6 per cent, res-

spectively, while the banks-brokerage-insurance-real estate group reported a loss in pay-rolls of 1.2 per cent.

The most pronounced declines in employment and pay-roll in the non-manufacturing industries between January and February (10.0 per cent and 13.4 per cent, respectively) were in the building construction industry. Weather conditions were largely responsible for this seasonal decline. Quarrying and non-metallic mining establishments reported a loss of 2.2 per cent in employment, anthracite mining showed a decrease of 1.5 per cent, the power and light industry showed a decrease of 1.3 per cent, and the retail trade and the crude petroleum producing industries showed decreases of 1 per cent each. The telephone and telegraph industry registered a loss of 0.6 per cent in number of workers, and the laundry and the dyeing and cleaning industries each decreased 0.1 per cent in employment.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

**T**HE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government with respect to contracts "for construction, remodelling, repair or demolition of any work" is set forth in an Act of Parliament adopted on May 30, 1930, entitled "The Fair Wages and Eight-Hour Day Act" (chapter 20-21, Geo. V). The full text of this measure appeared in the *LABOUR GAZETTE*, April 1930, page 383. The Fair Wages and Eight-Hour Day Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repairs or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(a) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or, except in cases of emergency, as may be approved by the Minister.

The Fair Wages Policy was originally adopted in 1900 and was expressed in an

Order in Council of June 7, 1922, which was subsequently amended by Order in Council of April 9, 1924. The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wages rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of contract.

In addition to the requirements of the Fair Wages and Eight-Hour Day Act, government contracts for the construction, remodelling, repair or demolition of any work, contain a number of other provisions for the protection of the workmen employed, which are sanctioned by the foregoing Orders in Council.

It is further provided in the foregoing Orders in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings; harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees; mail bags, letter boxes, and other postal stores; and any other articles and things hereinafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours.

These conditions, which are referred to in the Orders in Council as "B" conditions (the Conditions of the Fair Wages Orders in Council with reference to building and construction works being designated as "A" conditions), including the following Fair Wages Clause:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

Both in the case of contracts for building and construction work, and in the "B" conditions sanctioned by Orders in Council applicable to contracts for the manufacture of certain classes of supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates and working hours.

The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and address of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various

classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed claim therefore may be filed with the Minister of the Department with which the contract has been made and payment of such claim may be made by the latter.

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially directed by the Fair Wages Orders in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of certain classes of supplies listed in the Fair Wages Orders in Council it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any disputes which may arise.

During the past month statements were received in the Department of Labour showing that the following contracts, containing fair wages conditions, have been recently executed by the Government of Canada:—

#### DEPARTMENT OF INDIAN AFFAIRS

##### *Contract in Group "B" (Manufacture of Supplies, etc.)*

The following is a statement of contracts awarded by the Department of Indian Affairs during the month of March, 1934, for certain classes of manufactured goods, which contracts included in all cases the "B" labour conditions above referred to:—

Goods contracted for	Contractor
Tweed.....	Caldwell Woollen Mills Ltd., Appleton, Ont.
Tweed.....	Watchorn & Co., Ltd., Mer- rickville, Ont. <sup>2b</sup>

## DEPARTMENT OF NATIONAL DEFENCE

*Contracts in Group "B" (Manufacture of Supplies, etc.)*

The following is a statement of contracts awarded by the Department of National Defence during the month of March, 1934, for various classes of manufactured goods, which contracts included in all cases the "B" labour conditions above referred to:—

Goods contracted for	Contractor
Cheese cloth.....	Montreal Cottons Ltd., Montreal, P.Q.
Kitchen equipment.....	General Steel Wares Ltd., Montreal, P.Q.
Safety razors.....	Gillette Safety Razor Co., Montreal, P.Q.
Braces.....	National Suspender Co., Toronto, Ont.
Dish towels.....	Dominion Textile Co., Montreal, P.Q.
Mackinaw coats.....	Grant-Holden-Graham Ltd., Ottawa, Ont.
Sheets and pillow slips.....	Dominion Textile Co., Ltd., Montreal, P.Q.
Steel sash.....	Truscon Steel Co. of Canada, Walkerville, Ont.
Cleanser powder.....	Swift Canadian Co., West Toronto, Ont.
Garbage cans.....	General Steel Wares Ltd., Montreal, P.Q.
Shaving brushes.....	Boeckh Co., Ltd., Toronto, Ont.
Hand towels.....	Stauffer, Dobbie Co., Ltd., Galt, Ont.
Drawers.....	Galt Knitting Co., Galt, Ont.
Aircraft.....	Fleet Aircraft of Canada, Fort Erie, Ont.
Copper.....	Consolidated Mining & Smelting Co., Ltd., Montreal, P.Q.
Tap Soles.....	Anglo-Canadian Leather Co., Toronto, Ont.
Harness.....	Hugh Carson Co., Ltd., Ottawa, Ont.
Waterproof coats.....	Grant-Holden-Graham Ltd., Ottawa, Ont.
Fire extinguishers.....	Pyrene Mfg. Co., Toronto, Ont.
Castile soap.....	London Soap Co., London, Ont.
Corn brooms.....	Excelsior Broom Co., Owen Sound, Ont.
Tent pins.....	J. Oliver & Sons, Ottawa, Ont.
Household soap.....	Guelph Soaps, Guelph, Ont.
Household soap.....	Royal Crown Soaps Ltd., Calgary, Alta.
Household soap.....	Northern Soap Co., Winnipeg, Man.
Mattresses and pillows.....	Arrow Bedding Ltd., Toronto, Ont.
Woollen socks.....	Brampton Knitting Mills, Brampton, Ont.
Enamel mugs.....	General Steel Wares Ltd., Montreal, P.Q.
Boots.....	J. A. & M. Cote Ltd., St. Hyacinthe, P.Q.
Double deck steel bunks.....	Arrow Bedding Ltd., Toronto, Ont.
Bed springs.....	Simmons Ltd., Vancouver, B.C.
Paillasse cases.....	St. Louis Bedding Co., Ltd., Montreal, P.Q.
Enamel cups.....	General Steel Wares Ltd., Montreal, P.Q.
Concrete sewer pipe.....	Harry Hayley, Ottawa, Ont.
Household soap.....	Royal Crown Soaps Ltd., Vancouver, B.C.
Aluminum rod.....	Aluminum Co. of Canada Ltd., Montreal, P.Q.
Cement.....	Canada Cement Co., Montreal, P.Q.
Peak caps.....	Ottawa Imperial Cap Co., Ottawa, Ont.
Cloth.....	Caldwell Woollen Mills Ltd., Appleton, Ont.

Goods contracted for	Contractor
Sweater jackets.....	Regent Knitting Mills Ltd., Montreal, P.Q.
Shirts and drawers.....	Joseph Simpson Sons, Ltd., Toronto, Ont.
Shirts and drawers.....	Penmans Ltd., Montreal, P.Q.
Shirts and drawers.....	Schofield Woollen Co., Oshawa, Ont.

## DEPARTMENT OF PUBLIC WORKS

*Contracts in Group "A" (Construction, etc.)*

Construction of alterations to the R.C.M.P. Barracks at Fredericton, N.B. Names of contractors, Messrs. J. H. Donovan, A. F. Belts, R. L. Hazlett and J. L. Simms, all of Fredericton, N.B. Date of contract, December 7, 1933. Amount of contract, \$8,239. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Bricklayers, masons and plasterers	\$0 90	8
Plumbers.....	0 60	8
Carpenters.....	0 50	8
Painters.....	0 50	8
Electricians.....	0 55	8
Sheet metal workers.....	0 55	8
Driver, team and wagon.....	0 60	8
Truck driver.....	0 35	8
Labourers.....	0 30	8

N.B.—In any cases where, by agreement or current practice, the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this work.

Laying floor over the boiler room at the Victoria Memorial Museum, Ottawa, Ont. Name of contractors, Messrs. Cuthbertson & Clark, Ottawa, Ont. Date of contract, February 19, 1934. Amount of contract, \$1,895. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Concrete mixer operator.....	\$0 45	8
Cement finishers.....	0 60	8
Stonemasons.....	1 00	8
Brick and hollow tile layers.....	1 00	8
Structural steel workers.....	0 65	8
Ornamental iron workers.....	0 45	8
Carpenters and joiners.....	0 70	8
Lathers, metal.....	0 75	8
Plasterers.....	0 80	8
Painters.....	0 55	8
Steamfitters.....	0 75	8
Labourers.....	0 40	8
Driver, horse and cart.....	0 63	8
Driver, team and wagon.....	0 81	8
Motor truck driver.....	0 40	8

N.B.—In any cases where, by agreement or current practice the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this work.

POST OFFICE DEPARTMENT

Following is a statement of payments made in March, 1934, for supplies ordered by the Post Office Department under contracts which were subject to regulations for the suppression of the sweating system, the securing of the payment to the workers of fair wages, and the performance of the work under proper sanitary conditions:—

Nature of orders	Amount
Making metal dating stamps and type, brass crown seals, cancellers, etc.— Pritchard-Andrews Co. of Ottawa, Ltd., Ottawa.....	\$551 61
Making and repairing rubber stamps, dates, etc.— Pritchard-Andrews Co. of Ottawa, Ltd.....	195 82
Making and supplying letter carriers' uniforms— Workman Uniform Co., Ltd., Montreal, P.Q.....	786 80
Mail bag fittings— F. W. Carling, Ottawa, Ont.....	3,286 00
C. Richardson & Co., St. Mary's, Ont.....	477 00
Scales— Pritchard-Andrews Co. of Ottawa, Ltd., Ottawa.....	312 50
Letter Boxes— Engine Works & Trading Inc., Montreal, P.Q.....	231 70

Fair Wages Conditions in Harbour Commission Contracts

Under the Fair Wages Order in Council it is provided that certain conditions, referred to therein as "A" conditions, shall, as far as practicable, be observed by the department or departments of the Government of Canada in connection with all agreements made by the Government involving the grant of Dominion public funds in the form of subsidy, advance, loan or guarantee for any of the purposes mentioned. Under this authority, fair wages conditions are prepared from time to time in the Department of Labour for insertion in contracts awarded by the Harbour Commissioners throughout Canada. The labour conditions in question are similar to those which are applicable to contracts awarded by the several departments of the Dominion Government and include either a fair wages schedule or the General Fair Wages Clause.

The Department of Labour has been notified that the following contract has been awarded under the above-mentioned conditions:—

Halifax Harbour Commissioners.

Construction of two transit sheds on Pier "B" of the Ocean Terminals, Halifax, N.S. Name of contractors, The Robb Engineering Works, Ltd., Amherst, N.S., and the J. W. Cumming Mfg. Co., Ltd., of New Glasgow,

N.S., jointly. Date of contract, February 16, 1934. Amount of contract, approximately \$965,591.82. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Bricklayers and masons.....	\$0 97½	8
Plasterers.....	0 70	8
Plumbers and steamfitters.....	0 70	8
Electrical workers.....	0 80	8
Riggers.....	0 50	8
Labourers.....	0 35	8
Structural steel workers.....	0 65	8
Carpenters.....	0 55	8
Blacksmiths.....	0 60	8
Blacksmiths' helpers.....	0 40	8
Cement finishers—floor.....	0 60	8
Cement finishers—wall.....	0 70	8
Concrete mixer operator.....	0 50	8
Hoisting engineers.....	0 60	8
Hoisting engineers—certificated....	0 75	8
Dinky drivers—gas.....	0 45	8
Dinky drivers—steam.....	0 50	8
Firemen.....	0 40	8
Machinists.....	0 65	8
Plumbers' and steamfitters' helpers	0 40	8
Painters and glaziers.....	0 50	8
Sheet metal workers.....	0 70	8
Driver, horse and cart.....	4.50 per day	8
Driver, team and wagon.....	6.50 per day	8
Motor truck driver.....	0.40 per hour	8
Roofers.....	0.55 per hour	8

N.B.—In any cases where, by agreement or current practice the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this work.

The French General Confederation of Labour recently unanimously adopted a plan for the social training of young unemployed persons and others, and has invited educational organizations to join in forming associations for carrying out such work. These associations would correspond to the divisions of large towns and to municipalities, and a committee composed of representatives of the founding organizations would administer the plan. The

duty of each association will be to establish in the development of schemes for the spare-time occupation of children, adolescents and adults separately, the organization consisting of (a) lay workers' organizations or groups for children attending the elementary schools; (b) recreation and study groups for adolescents of 13 to 17 years of age; (c) youth groups for persons from 18 to 25; (d) popular workers' education groups, for the particular benefit of adults.

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Logging

#### CRESCENT INLET, B.C.—ONE TIMBER OPERATOR AND THE COMMITTEE OF LOGGING CAMP EMPLOYEES.

Agreement made following the strike reported on page 320 of this issue. Agreement to be in effect from March 23, 1934.

Camp committees to be recognized and meetings may be held by the men in the company's employment without any interference. Organizers may visit any camp to take up grievances and the welfare of the men, and a grievance committee in Vancouver to be recognized.

No discrimination against strikers and they are to be offered re-employment before any new men are employed. No discrimination to be shown any worker because of his political, religious or union affiliation. Workers laid off when operations are partly or wholly closed down for a time are to be given first chance to go back to their occupations when operations are resumed.

Board and blankets to be supplied at \$1.10 per day.

Double time to be paid for Sunday work.

Wages per day: hook tenders, \$6; first boom man \$5; rigging slinger \$4.75; scaler, chasers, second boom man, knotter, dragsaw man, \$4; chokerman, donkey fireman, wood splitter, wood buckler (steam or gas), \$3.75; signalman, \$3.25; fallers and buckers 50 cents per day increase. Bull cook and helper \$45 per month and board.

### Manufacturing: Fur and Leather Products

#### TORONTO, ONTARIO.—CERTAIN SHOE MANUFACTURERS AND THE SHOE AND LEATHER WORKERS INDUSTRIAL UNION OF CANADA, LOCAL No. 1.

These agreements were signed following strikes in some of the establishments recorded in the LABOUR GAZETTE for February and subsequent months.

Agreements to be in effect from various dates in February, 1934, and later, until February 15, 1935.

Only union members to be employed if available, and any others employed must join the union. The shop chairman and shop committees as well as union officers to represent the workers in all dealings with the firm, and any complaints from either side are to be made through them.

If there is insufficient work to keep all employed at full time, work to be divided as equally as possible, and the shop committee will co-operate in this division of work.

Questions and complaints as to hours, wages and working conditions to be decided according to the prevailing condition in the Toronto market at the time.

### Manufacturing: Textiles and Clothing

#### MONTREAL, QUEBEC.—CERTAIN MANUFACTURERS OF LADIES CLOAKS AND SUITS AND THE INTERNATIONAL LADIES GARMENT WORKERS' UNION, LOCAL No. 19 (CUTTERS).

Agreement reached following strike reported on page 320 of this issue. Agreement to be in effect from March 10, 1934 to September 10, 1934, and if required notice not given, it is to continue in effect until March 10, 1935.

Only union members to be employed. Complaints to be taken up by a union representative and the employer.

Hours: 8 per day, 4 on Saturday, a 44 hour week.

No overtime to be worked until all unem-ployed are absorbed. In the busy season, overtime may be worked, but not in excess of 8 hours in any week.

Wages: an increase of \$5 per week to be given all cutters and assistants.

All work to be divided as equally as possible among the cutters during the slack season.

In case of a strike, the agreement is automatically terminated on the day of such strike is declared.

#### TORONTO, ONTARIO.—A MANUFACTURER OF BOYS' CLOTHING AND THE NATIONAL CLOTHING WORKERS OF CANADA.

Agreement referred to in report of a strike on page 317 of this issue. Agreement to be in effect from March 1, 1934, to February 28, 1935.

Only union members to be employed or those who will join the union, and after a short trial period, no employee is to be discharged without just cause and without consulting the executive committee of the union.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Any extra time to be recognized as overtime and paid as such.

No work to be done on a piecework basis.

Wage rates to be equivalent to those paid in other union shops, where work of a similar character is performed.

Any disputes arising to be considered jointly by the union executive and the company, and if no settlement reached, a third party to be called in for consultation.

## Manufacturing: Wood Products

TORONTO, ONTARIO.—ONE UPHOLSTERING COMPANY AND THE FURNITURE AND WOODWORKERS' INDUSTRIAL UNION OF TORONTO.

Agreement reached following strike reported on page 321 of this issue. Agreement to be in effect from March 15, 1934, to August 22, 1934, and thereafter from year to year until notice.

The terms of this agreement are the same as those of the agreement with certain other manufacturers which was summarized in the LABOUR GAZETTE, September, 1933, page 953, except that the percentage wage increases are not mentioned in this agreement, but instead a new piecework scale is attached.

Minimum wage rates are the same as in the other agreement: 60 cents per hour for upholsterers, 50 cents for cutters, operators, springers, cushion makers, etc. and from 35 to 60 cents for frame workers, and a minimum for labourers of \$15 per week or 34 cents per hour.

Hours are the same at 44 per week with overtime pay of time and one-quarter for all work over 48 hours per week.

## Transportation and Public Utilities: Water Transportation

MONTREAL, QUEBEC.—VARIOUS STEAMSHIP COMPANIES AND CONTRACTING STEVEDORES AND THE ASSOCIATION OF THE SYNDICATED LONGSHOREMEN OF THE PORT OF MONTREAL.

Agreement to be in effect from March 20, 1934, to March 31, 1935, and thereafter from year to year until notice.

This agreement is the same as the one previously in effect and summarized in the LABOUR GAZETTE, August, 1933, page 852, with the following exceptions:

A number of stevedoring companies have also agreed to the terms of the agreement in respect to all ocean steamships coming into the harbour of Montreal for which they are the stevedoring contractors.

The union will supply men only to the companies and contracting stevedores who are signatories to the agreement.

Wages per hour for longshoremen: 59 cents per hour for day work (an increase of 3 cents per hour over last year); 66 cents between 7 p.m. and 11 p.m. (no change from last year); 79 cents from midnight to 5 a.m. (an increase of 3 cents per hour over last year). For work with certain specified cargoes and for handling cargo in refrigerators which is to be transported at 32 degrees Fahrenheit or under, for grain trimming and bagging, work in open 'tween deck where there is grain running in a hatch connected with the said open deck: 11 cents per hour extra for day work and for work between 12 midnight and 5 a.m., and 12 cents per hour extra for work between 7 p.m. and 11 p.m.

MONTREAL, QUEBEC.—VARIOUS SHIPPING COMPANIES AND STEVEDORING COMPANIES AND THE INDEPENDENT ASSOCIATION OF CARPENTERS AND SHIPLINERS OF THE PORT OF MONTREAL.

Agreement to be in effect from March 30, 1934, to March 31, 1935, and thereafter from year to year until notice.

This agreement is the same as the one previously in effect and summarized in the LABOUR GAZETTE, August, 1933, page 853, with the following exceptions:

A number of stevedoring companies have also agreed to the terms of the agreement in respect to all ocean steamships coming into the harbour of Montreal for which they are stevedoring contractors.

Wages per hour for shipliners: 59 cents for day work (an increase of 3 cents per hour over last year's rate); 66 cents between 7 p.m. and 11 p.m. (no change from last year); 79 cents between midnight and 5 a.m. (an increase of 3 cents per hour over last year's rate). For work in holds of steamers in which bulk sulphur or bulk fertilizer has been stowed and where the old wood is being used: 11 cents per hour extra for day work and for work between midnight and 5 a.m., and 12 cents per hour extra for such work between 7 p.m. and 11 p.m.

## Transportation and Public Utilities: Local Transportation and Storage

PRINCE RUPERT, B.C.—THE CANADIAN FISH AND COLD STORAGE COMPANY LIMITED AND THE FISH PACKERS UNION OF PRINCE RUPERT (FEDERAL UNION No. 49).

Agreement to be in effect from January 15, 1934, until terminated by notice. This agreement amends the previous agreement which was in effect from August 9, 1921, and terminated January 15, 1934, and which was the result of the report of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act (LABOUR GAZETTE, September, 1921, page 1115).

Wages: a five per cent increase on rates which were in effect from January, 1933, to January, 1934, making the following basic rates after January 15, 1934: ordinary time 44½ cents per hour, overtime 51½ cents, Sundays and holidays 54½ cents; cullers 48½ cents.

The semi-annual adjustment in wages (January and July of each year) according to changes in the cost of the family budget in the LABOUR GAZETTE to be based on the average figures for the preceding six months.

The legislatures of the provinces of Ontario and Quebec have before them bills to amend the Women's Minimum Wage Acts of these provinces so as to forbid the employment of boys at lower rates of wages than the minimum wages fixed for girls by the Board or Commission. The amendment to the Quebec Act provides as follows: "No male worker shall be employed at work usually or by general custom performed by female workers, at a rate less than that fixed, by an order of the Commission, to govern such female workers." The powers of the Quebec Commission have been strengthened in dealing with evasions of the Act, and jail sentences without the option of a fine may be imposed for third offences; while in Ontario jail sentences may be imposed for second offences. The Ontario Board may also specify the maximum number of hours per week to which the minimum wage will apply.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, MARCH, 1934

### Cost of Living, Prices of Staple Articles and Index Numbers

THE cost of the weekly family budget in terms of retail prices was considerably higher at the beginning of March, due mainly to the advanced cost of foods, while the Dominion Bureau of Statistics index number of wholesale prices was fractionally lower, due mainly to lower prices for certain farm products and non-ferrous metals.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was \$8.04 at the beginning of March as compared with \$7.63 for February; \$6.67 for March, 1933; \$11.67 for March, 1930; \$11.46 for March, 1926; \$10.54 for March, 1922; \$16.92 for June, 1920 (the post war peak); and \$7.68 for March, 1914. The most important increases occurred in the cost of meats, eggs, butter, and potatoes. Including the cost of fuel and rent with that of foods the total budget averaged \$16.51 at the beginning of March as compared with \$16.09 for February; \$15.59 for March, 1933; \$21.96 for March, 1930; \$21.77 for March, 1926; \$20.96 for March, 1922; \$26.92 for July, 1920 (the post war peak); and \$14.35 for March, 1914. Fuel was slightly higher due to increases in the price of wood in some localities. Rent was unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics was slightly lower at 72 for March as compared with 72.1 for February. Comparative figures for previous dates are 64.4 for March, 1933; 91.8 for March, 1930; 101.3 for March, 1926; 98.3 for March, 1922; 164.3 for May, 1920 (the post war peak); and 64.7 for March, 1914. Ninety-nine prices quotations were lower, ninety-four were higher and three hundred and seventy-four were unchanged.

In the grouping according to chief component materials six of the eight main groups were higher and two were lower. The Animals and their Products group and the Non-Ferrous Metals and their Products group declined, the former due to lower prices for calves, hogs, eggs, hides and leather which more than offset increased quotations for steers, lambs, butter, fresh and cured meats, and the latter due mainly to lower prices for copper, lead and zinc. The groups which advanced were: the Vegetables and Vegetable Products group, because of higher prices for wheat, bran, shorts and tea; the Fibres, Textiles and Textile Products group because of higher quotations for cotton fabrics, cotton yarn and thread which more than offset lower

quotations for raw cotton, raw silk and worsted cloth yarns; the Wood, Wood Products and Paper group owing chiefly to higher prices for fir timber and wood pulp; the Iron and its Products group due to higher prices for scrap iron, scrap steel and foundry pig iron; the Non-Metallic Minerals and their Products group owing mainly to higher quotations for glass tumblers; and the Chemicals and Allied Products group due to higher prices for fertilizers.

In the grouping according to purpose consumers' goods were fractionally lower due to declines in the prices of foods, chiefly eggs and potatoes. Producers' goods were unchanged, higher prices for materials for the textile and clothing industries, for the meat packing industries and for the milling industries being offset by lower prices for materials for the furs and leather goods industries, for the metal working industries and for the chemical using industries.

In the grouping according to origin raw and partly manufactured goods were lower and fully and chiefly manufactured goods were somewhat higher. Canadian farm products and articles of mineral origin declined, articles of forest origin were somewhat higher and articles of marine origin were unchanged.

### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of March of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

(Continued on page 382)

## COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family

less than 6 rooms \$20, others \$40 and up. r Mining company houses in district \$5-\$10 per month; others, five and six rooms.

(Continued from page 374)

The figures as to rental are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amounts due.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which statistics were available when first published in the LABOUR GAZETTE in January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

### Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living, based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number for rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and costs of the various items from 1913 to 1926, weighted according to the importance of each item in workmen's family expendi-

ture, and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

### Retail Prices

The advance in beef prices continued, sirloin steak being up from an average of 20.9 cents per pound at the beginning of February to 21.5 cents at the beginning of March, rib roast from 16 cents per pound to 16.4 cents and shoulder roast from 11.4 cents per pound to 12 cents. Prices were considerably lower in the prairie provinces than in other localities. Veal and mutton were also generally higher, the former being up from 12.5 cents per pound to 13.2 cents and the latter from 19.9 cents per pound to 20.8 cents. Both fresh and salt pork were again substantially higher, the former being up from 19.4 cents per pound

\*Prior to 1926 number of commodities was 236 and commencing in January, 1934, the number is 567.

in February to 21.2 cents in March and the latter from 17.4 cents per pound to 18.6 cents. Prices a year ago were 12.1 cents per pound for fresh pork and 13.5 cents for salt pork. Breakfast bacon was more than 4 cents per pound higher than in February averaging 28.7 cents per pound as compared with 24.4 cents the previous month. The price in March, 1933, was 17.2 cents per pound.

The price of eggs was generally higher in Ontario and other eastern provinces and lower in the western provinces. The Dominion average for fresh eggs was 40.5 cents per dozen at the beginning of March as compared with 35.3 cents in February and 40.7 cents in January, while cooking eggs averaged 34.6 cents per dozen in March, 28.4 cents in February and 30.2 cents in January. Milk was unchanged at an average price of 9.7 cents per quart. Butter prices were again higher in most localities, dairy averaging 28.3 cents per pound as compared with 25.7 cents the previous month and creamery averaging 32.5 cents per pound as compared with 29.7 cents in February.

The prices of bread and flour were practically unchanged. The advance in the price of potatoes continued in most localities, the Dominion average being up from \$1.18 per ninety pounds in February to \$1.35 in March. The price of evaporated apple was down in the average from 15.5 cents per pound to 14.9 cents, while prunes were fractionally higher at 12.7 cents per pound. The price of anthracite coal was practically unchanged at an average of \$15.18 per ton. Hardwood in stove lengths was up from an average price of \$11.38 per cord in February to \$11.55 in March. No changes were reported in rent.

## Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices moved within narrow limits during March. No. 1 Manitoba northern cash wheat, Port Arthur and Fort William basis, was up from an average price of 65.6 cents per bushel to 66.4 cents. The low price for the month was 65½ cents per bushel reached

at the beginning and the high 67½ cents on the 10th. In coarse grains western oats were down from 33·7 cents per bushel to 33·6 cents, rye from 46·6 cents per bushel to 46·1 cents and barley from 40 cents per bushel to 39·7 cents. Bran and shorts were both higher, the former being up from \$23.75 per ton to \$24.79 and the latter from \$25.75 per ton to \$26.13. Raw sugar at New York was down from \$1.36 per cwt. to \$1.16, while granulated at Montreal was unchanged at \$6.37 per cwt. Ceylon rubber advanced from 10·5 cents per pound to 11·1 cents, this being the highest price reached since July, 1930. Consumption of rubber in United States for February was 87 per cent above that for the same month last year. In livestock choice steers at Toronto rose from \$5.83 per hundred pounds to \$5.99 and at Winnipeg from \$4.58 per hundred pounds to \$4.90. Lambs also were higher the price at Toronto being up from \$7.93 per hundred pounds to \$8.47 and at Winnipeg from \$6.08 per hundred

pounds to \$7.03. Hogs at Montreal declined from \$9.67 per hundred pounds to \$9.36, at Toronto from \$9.67 per hundred pounds to \$9.11 and at Winnipeg from \$8.76 per hundred pounds to \$8.25. Egg prices were substantially lower with greatly increased production, the fresh grade being down at Montreal from an average price of 43·1 cents per dozen to 25·8 cents and at Toronto from 40·5 cents per dozen to 24·9 cents. The price of creamery butter at Toronto advanced from 28·9 cents per pound to 31·4 cents and at Winnipeg from 28 cents per pound to 30 cents. Stocks in cold storage at the beginning of March were about 27 per cent lower than at the same date last year and 51 per cent lower than at the beginning of February. The price of raw silk at New York declined from \$1.84 per pound to \$1.63. Raw wool was down from 24·5-27·5 cents per pound to 24-25 cents. Fir timber was \$1 per thousand board feet higher at \$17.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE accompanying tables, which appear quarterly, give the official and certain other index numbers of cost of living, retail and wholesale prices in Great Britain and several of the principal commercial and industrial countries. The following notes afford information as to significant changes according to groups of commodities in some of these countries. The index numbers of the cost of living are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

### Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1924 = 100, was 63·4 for February, an increase of 0·6 per cent over the January level. Foods were slightly lower on the average, while industrial materials, with the exception of small reductions in coal and wool prices, were higher for the month.

The *Statist* index number, on the base 1867-1877 = 100, was 82·5 at the end of February, showing no change from the previous month. Foods on the whole were unchanged, increases in vegetable food, sugar, coffee and tea were offset by slightly lower prices for animal food. Among industrial materials, increases in minerals and textiles were counteracted by a decrease in the sundries group.

COST OF LIVING.—The Ministry of Labour index number, on the base July, 1914 = 100, was 140 at the beginning of March, a decline

of one point for the month due to lower food prices, chiefly a seasonal fall in the prices of eggs and milk. Other groups were unchanged for the month.

### France

WHOLESALE PRICES.—The General Statistical Office index number, on the base 1914 = 100 (gold index), was 78 for February, a decline of one point for the month. Both food and industrial materials were lower on the average for the month.

### Germany

WHOLESALE PRICES.—The Federal Statistical Office index number, on the base 1913 = 100, was 96·2 for February, a decrease of 0·1 per cent for the month, due chiefly to a fall of 1·1 per cent in agricultural products. Among industrial materials, an advance of 6·5 per cent in rubber was the only considerable change in any of the groups for the month.

COST OF LIVING.—The official index number, on the base 1913-1914 = 100, was 120·7 for February, a decline of 0·2 per cent for the month, due chiefly to slightly lower food prices. There was also a fractional decrease in the sundries group, while rent and heat and light were unchanged from the January level.

### United States

WHOLESALE PRICES.—The Bureau of Labour Statistics index number, on the base 1926 = 100, was 73·6 for February, an advance of

(Continued from page 384)

about 2 per cent for the month and of 23 per cent over the low point reached in February, 1933. Compared with the previous month, the increase in February extended to nine of the ten main groups, the only decrease being one of one per cent in the fuel and lighting materials group. Among the commodities showing substantial advances in price for the month were grain alcohol, cotton, live stock and poultry, meats, crude rubber and potatoes.

*Bradstreet's* index number (continued by Dun and Bradstreet, Incorporated), which is the sum total of the prices per pound of 96 commodities of common consumption, was \$9.2627 at March 1, an increase of 2.8 per cent over the previous month's level. Increases were noted in live stock, provisions, textiles, metals, naval stores, building materials, chem-

icals and drugs and miscellaneous commodities, while there were decreases in breadstuffs, fruits, hides and leather, and oils.

*Dun's* index number (continued by Dun and Bradstreet, Incorporated), which is based on the cost *per capita* of a year's supply of commodities was \$165.026 at March 1, an advance of 0.3 per cent for the month. Small advances were noted in all groups except breadstuffs, which was slightly lower than the February level.

**COST OF LIVING.**—The index number of the National Industrial Conference Board of the cost of living for industrial wage earners, on the base 1923 = 100, was 78.3 for February, an increase of one per cent for the month. Small increases were noted in all groups except fuel and light which was unchanged from the January level.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Incorporated Union Must be Sued as a Legal Entity

Appeal was taken in the Manitoba Court of Appeal by the One Big Union and others from a *pro forma* judgment of Mr. Justice Dysart, affirming an order of the Referee directing Robert B. Russell to attend and answer questions on a cross-examination on an affidavit, he having previously refused to answer. The action was by Samuel Sykes and Thomas E. Moore against the One Big Union, the Winnipeg Central Labour Council of the One Big Union, and William McCallum, Robert B. Russell, Thomas McClure, Alex. Hume, Allan Meikle and Septimus Johnson. The statement of claim alleged that the One Big Union was an association or partnership having members admitted to it through local units thereof, made up of classes or groups of wage-earners, upon application and payment of fees, and that the Winnipeg Central Labour Council was a department of the One Big Union, and consisted of representatives of local units of the Winnipeg district of the Union. The remaining defendants were stated to be officers, agents, or employees of the same organization or partnership. The plaintiffs stated that they were members of the association or partnership, and that they brought the action on behalf of themselves as well as on behalf of all other members of the One Big Union entitled to share in the assets referred to in the statement of claim.

Mr. Justice Trueman (with whom Chief Justice Prendergast, Mr. Justice Dennistoun and Mr. Justice Richards agreed) in his judgment

in the Court of Appeal, found that the action was not properly constituted since the statement of claim did not contain the allegation that the One Big Union and the Winnipeg Central Labour Council were incorporated, or otherwise legal entities, entitled to sue and be sued in their own names; and although it did allege that the One Big Union was "an association or partnership," with funds or property in which the plaintiffs claimed that the members have a partnership interest, and that the Winnipeg Central Labour Council was "an organization forming a part or department of the One Big Union," nevertheless these allegations did not show that they were partnerships within the legal definition of that term.

In support of the application was an affidavit of the defendant Russell in which it was stated that the One Big Union was a voluntary association formed in the interests of the working classes; that there were approximately 7,000 members, and that the Winnipeg Central Labour Council of the One Big Union was a voluntary organization, for which provision was made by the constitution and by-laws of the One Big Union. Copies of the constitution and by-laws of the One Big Union and of the Winnipeg Central Labour Council were exhibits. The membership of the Council was stated to be approximately 46 members.

Mr. Russell was cross-examined on the affidavit and required by notice to produce in addition to the constitution and by-laws of the One Big Union and the Winnipeg Central Labour Council all documents, etc., evidencing or constituting them or either of them an organization or association, and also evidencing

their formation; also all documents, etc., showing the number of members of the One Big Union, their names, places of residence, the units to which they belong and whether they are or are not in good standing; all documents, etc., showing the names and places of residence of the members of the Winnipeg Central Labour Council, from what units they are elected, when they are elected, and whether or not now in good standing; all documents, etc., relating to the business carried on by the One Big Union and the Winnipeg Central Labour Council or either of them. He declined to answer most of the questions, and to produce said documents, his counsel taking the position that they were either outside the affidavit or within the information contained in the constitution and by-laws of both bodies.

"The statement of claim is at fault," his Lordship stated, "in making the One Big Union and the Winnipeg Central Labour Council parties. It is not set up by anything therein that they are incorporated or are otherwise legal entities entitled to sue and be sued in their own name. See *Russell v. Amalgamated Society of Carpenters* (1912) and *Society Brand Clothes, Ltd. v. Amalgamated Clothing Workers of America* (1931).<sup>\*</sup> On the contrary, what is stated and accepted in the statement of claim is that they are voluntary associations. As Mr. Russell's affidavit merely says that they are such and adduced their respective constitutions and by-laws to prove it, there should not be a cross-examination upon it outside its limits. There is one ground alone upon which the One Big Union can be a party, and that is if it is a partnership name under which the individuals who compose its membership carry on a business in common with a view to profit. . . .

"I would allow the appeal. The plaintiffs to apply in the King's Bench within 20 days to amend the statement of claim as to parties and in all other matters necessary to give effect to what is above indicated, including application for the adding of representative parties. All other proceedings in the meantime to be stayed, but reserving to the individual defendants all rights in event of the plaintiffs failing to comply herewith. Further directions reserved. The individual defendants to have their costs here and below, to be costs in the cause in any event."

Mr. Justice Robson, in a separate judgment, agreed that the appeal should be allowed.

*Sykes versus One Big Union* (Manitoba), 1934, *Western Weekly Reports*, vol. 1, page 655.

<sup>\*</sup>LABOUR GAZETTE, January, 1931, page 108.

### Contributory Negligence not a Bar to Workmen's Compensation

A saleslady in a ladies' ready-to-wear shop at Winnipeg fell through a trap-door in the course of her employment and received injuries for which Mr. Justice Adamson assessed damages at \$900, deducting \$450 on account of her contributory negligence (*LABOUR GAZETTE*, November, 1933, page 1142). The defendant company appealed, but the appeal was dismissed by the Manitoba Court of Appeal.

Mr. Justice Dennistoun, in his judgment, said: "There adjoins the main shop a room which was used as a fitting room and also as a passageway from the front to the back of the premises. In the floor of this room was a trap-door which was opened from time to time when coal was being taken through it into the cellar. This trap-door was almost as large as the room, and a person passing from the shop to the fitting room, without looking, was bound to fall into it when open. The plaintiff was familiar with the premises. She knew the trap-door was dangerous when open. She knew that coal was being taken into the cellar, and had heard a warning given to the employees on the morning in question that the trap was open. All these things she forgot, and in her zeal to get a customer's coat in a hurry, she opened the door and fell through the trap, and was injured.

"It was argued that in doing what she was warned not to do she was outside the scope of her employment, and could not have the benefit of Part 2 of The Workmen's Compensation Act. The cases which were referred to are no authority that a woman who is actually performing her master's business, not in wilful disobedience of orders, but in mere forgetfulness of a warning, is deprived of the benefit of the statute, when the master is clearly guilty of negligence on his part. That the defendant was guilty of negligence in leaving this open trap-door without any sufficient guard, or protection, is also the finding of the trial judge, and I agree with it.

"It was suggested on the argument in this court that employees in the retail shop trade are not covered by Part 2 of The Workmen's Compensation Act, but it is my opinion that they are covered, 'Industry' as defined by sec. 2 (i) includes establishment, undertaking, trade, and business. These words are broad enough to include the retail shop-keeping trade or business, and the employees in such trade or business may be given the benefit of Part 1 of the Act if the Board, under the provisions of sec. 70, sees fit to include them by regulation. If that should be done, they would

lose their right of action in the courts, and be relegated to the jurisdiction of the Board, and to the compensation provided by the general insurance scheme which applies under Part 1. Not being included in Part 1, they retain their right of action under Part 2: *Vide* secs. 81 to 84 inclusive. Part 2 also covers outworkers, clerks and casuals, who are excluded from Part 1 by sec. 2 (r). The persons who are by express enactment excluded from the operation of the whole Act are farm labourers, domestics, and menial servants, by sec. 85. *Expressio unius est exclusio alterius*. Being excluded from the automatic compensation provided for by Part 1, the plaintiff, and persons in her class, are given a very sweeping measure of protection in the courts which was formerly denied to them, by Part 2.

"By secs. 82, 83 and 84, the old doctrines of the common law relating to *volenti non fit injuria*, common employment, and contributory negligence, are so dealt with that scores of decided cases have now no application. A new code has been set up in Manitoba which renders a large part of the old law obsolete.

"In the present case, the plaintiff is entitled to succeed, because the ways, and the premises, of the defendant were in a defective condition, whereby personal injury was caused, and a right of action is given by sec. 82.

"The plaintiff's contributory negligence, which would have been fatal before this Act was passed, is no longer a bar, for sec. 83 provides that 'contributory negligence on the part of the workman shall not be hereafter a bar to recovery by him.' After which follows sec. 84:—

'Contributory negligence on the part of the workman shall nevertheless be taken into account in assessing the damages in any such action.'

"The learned trial judge has given effect to this by reducing the damages assessed by him to one-half. The plaintiff recovers only \$450 out of \$900 by reason of her forgetfulness.

"I can find no case in which Part 2 of the Act has been reviewed. It is new legislation in this province, and calls for construction and application by the ordinary rules of interpretation. Most of the old cases which formerly governed actions between servant and master for personal injuries arising out of and within the scope of the employment have by the express words of this Act been superseded.

"It was further argued that there can be no recovery when the plaintiff had previous knowledge of the defect which caused the injury. Many cases were referred to on this point, such as *Fonseca v. Lake of the Woods Milling Co.* (1905); *Roy v. Henderson* (1908); *Thomas v. Quartermaine* (1887); *Reid v.*

*Mimico (Town)* (1926). Such cases no longer help the defendants, for by sec. 82 (4) of the Act it is provided: 'A workman shall not, by reason only of his continuing in the employment of the employer with knowledge of the defect or negligence which caused his injury, be deemed to have voluntarily incurred the risk of the injury.'

"I would dismiss the appeal with costs."

*Webber versus Fifth Avenue Limited* (Manitoba) 1934. *Western Weekly Reports*, vol. 1, page 589.

### Workman not Compensated for Injury of which he was the Author

Two carpenters were engaged in sheeting the first hip of the roof of a house that was being constructed. One of the two men (the plaintiff in this case) slipped from the scantling on which they were standing, and sustained personal injuries. He brought action against the owner for damages, claiming that the latter had been negligent in failing to provide two scantlings or some other means to furnish a better toe-hold. Mr. Justice Kerwin, who tried the case without a jury, found that the defendants had nothing to do with the placing of the scantling, which was done by the plaintiff and his companion themselves. The plaintiff therefore was the author of his own injury, and the provisions of Part II of the Workmen's Compensation Act of Ontario did not apply. This would be so, his Lordship added, even if the plaintiff had been able to prove that he slipped because of the wet or slippery condition of the scantling.

It was argued on behalf of the plaintiff that section 5 of the Building Trades Protection Act had been infringed. This section provides as follows:

5. In the erection, alteration, repair, improvement or demolition of any building, no scaffolding, hoists, stays, ladders, flooring or other mechanical and temporary contrivances shall be used which are unsafe, unsuitable, or improper, or which are not so constructed, protected, placed and operated as to afford reasonable safety from accident to persons employed or engaged upon the building.

His Lordship found that there was nothing used in connection with the construction of the house which was "unsafe, unsuitable, or improper," or which was not "so constructed, protected, placed and operated as to afford reasonable safety from accident to persons employed or engaged upon the building."

The action was dismissed with costs.

### Question of Priority of Claims of Compensation Board in Bankruptcy Proceedings.

In the Bankruptcy Court at Toronto, Mr. Justice Armour heard a motion by the Trustee in Bankruptcy of the estate of Robert W. J. Bolus Company Limited, debtor, for directions as to the priority of claims filed (1) by the Ontario Workmen's Compensation Board; (2) by W. J. Jeffers, the landlord of premises leased by the debtor, and (3) by the trustee in respect of his fees, etc. The Workmen's Compensation Board claimed \$1,017.16, and the landlord \$1,735.90. Discussing the question of the priority of these claims, Mr. Justice Armour said:

"The question now for determination is, which of these claims shall prevail: the trustee's, the landlord's or the Board's? The answer to that question depends on the construction of sections 121, 123, 125 and 126 of The Bankruptcy Act, section 37 of The Landlord and Tenant Act, section 107 of The Workmen's Compensation Act, and sections 97 and 112 of The Assessment Act.

"The Bankruptcy Act, by section 121, provides that, 'Subject to the provisions of section one hundred and twenty-six as to rent, in the distribution of the property of the bankrupt or authorized assignor, there shall be paid, in the following order of priority:

"First, the costs and expenses of the custodian and the fees and expenses of the trustee;

"Secondly, the costs of the garnishing, attaching, execution or judgment creditor,' etc.

"Thirdly, all indebtedness of the bankrupt or authorized assignor under any Workmen's Compensation Act."

"Notwithstanding this rule and the fixed order of priority of its claim by section 121—which, it will be noted, is made subject to the rights and priorities of the landlord—the Board strenuously argues that the joint effect of section 107 of The Workmen's Compensation Act, section 125 of The Bankruptcy Act, and section 112 of The Assessment Act gives its claim priority over all other claims, including that of the landlord, and the costs and expenses of the custodian and the fees and expenses of the trustee."

His Lordship analysed the contentions of the Board, and proceeded: "With this argument the learned Justice did not concur. Where the priority of the claim of the Board has been specifically dealt with and definitely fixed by the Bankruptcy Act, the Dominion statutes having to do with a subject within the exclusive legislative authority of the

Parliament of Canada, that priority cannot be displaced by reference to certain sections of The Workmen's Compensation Act, a provincial statute, dealing only with the collection of assessments of the Board made thereunder. . . .

"The conclusion is that the order of priority of the Board's claim is fixed by section 121 of The Bankruptcy Act, and by that Act alone. Its claim has no priority over the costs and expenses of the custodian or the fees and expenses of the trustee.

"But what of the contest for priority between the claims of the landlord and the Workmen's Compensation Board? In this the landlord succeeds. His preferential lien for rent, given him by section 37 of The Landlord and Tenant Act and brought into The Bankruptcy Act by section 126, has been established beyond question by a great number of decided cases. In addition, the order of priority of the claims mentioned in section 121 of The Bankruptcy Act is specifically made "subject to the provisions of section one hundred and twenty-six as to rent," thereby putting it beyond all doubt that the landlord's claim for rent is superior to the claims mentioned in that section. Therefore, his claim in this case takes precedence over the claim of The Workmen's Compensation Board, as it would have taken precedence over the claim of the trustee for his costs, fees and expenses, except for the agreement already mentioned. Therefore, the landlord, W. J. Jeffers, is entitled to the balance of \$631.71 in the hands of the trustee. The trustee, as it did not appear by counsel or by a solicitor, is not entitled to any costs, and the costs of the landlord will be paid by the Workmen's Compensation Board."

Re: *Robert W. J. Bolus Co. Limited* (Ontario), 1934, *Ontario Weekly Notes*, page 166.

### Question of Validity of Certain Regulations of Workmen's Compensation Board

A doctor brought an action against the Workmen's Compensation Board of New Brunswick claiming payment for work done and medical aid provided for employees of certain companies under the Workmen's Compensation Act. The Board had paid the doctor for other services but denied its liability in connection with the cases for which the present claim was made. Among other reasons for its refusal the Board stated that the doctor had failed to make reports on these cases, or had been late in forwarding reports.

Chief Justice Barry, in the King's Bench Division, New Brunswick Supreme Court, in

the course of his judgment said:—"During the time that the earlier Compensation Acts were in force, the Board did not require the doctor in charge of accident cases to send in preliminary reports in what are called minor cases, that is, cases in which the disability does not extend beyond seven days. The nature of the disability was only required to be noted on the bill which followed the services. In order to entitle the doctor to remuneration, there is no limitation in the Act as to the time within which he must send in his report or bill. Without any authority that I can find, the Board here has set up a statute of limitations of its own. There has been placed in evidence a small booklet containing a schedule of medical fees which has been approved of by a special committee representing the New Brunswick Medical Association and the Workmen's Compensation Board, copies of which have been sent to all the registered medical practitioners of the Province. No exception can be taken to the schedule of fees thereby established, but when the special committee assumes the right to make laws, legislate and pass the following provision:—'No medical or hospital fees shall be paid unless there is filed with the Board a statement of claim signed by the injured workman and supported by such other evidence as the Board shall require,' then, I think, the special committee is acting without authority and beyond its powers, and until approved by the Governor in Council (s. 74 (1)) which has not been done, such a provision is nugatory and non-effective.....

"Mr. John A. Sinclair, the Chairman of the Board, has stated in his evidence that they never penalize the workman by withholding his compensation because the doctor delays his report unreasonably; and that in a minor case, absence of a doctor's report does not affect the workman at all—unless the case should break out again. The converse of the course adopted in the case of a workman would seem to be the course which has been adopted in the case of the plaintiff here. To the ordinary mind it would look as if the Board were—to adopt the chairman's expression—'penalizing the doctor,' because the workman over whom he has no control whatever, and who in 95 per

cent of the cases has no report to make, has made no report. . . .

"As I view the present case, the matter in controversy between the parties has never been inquired into, heard and determined by the Board. The merits have never been passed upon. There has never been a determination of either law or fact from which the plaintiff might appeal under s. 35 (1). What the Board has said is, substantially: under a statute of limitations which we ourselves have set up, your claim for remuneration for professional services rendered to injured workmen comes too late; therefore we will not consider it, but send it back to you undetermined. In such circumstances it would seem to me to amount practically to a denial of justice to debar the plaintiff from resorting to the common law Courts for redress. The question may not perhaps be wholly free from doubt, and may be one well worthy of a Court of Appeal.

"The Workmen's Compensation Act is a long step forward in social legislation designed to rehabilitate and aid in getting injured workmen back to work, and to assist them in lessening or removing any handicap resulting from their injuries. And for the attainment of those objects the Board is given large discretionary powers, and may take such measures and may make such expenditures—not, however, to exceed \$1,500 in any calendar year—as it may deem necessary or expedient; and such expenses shall be borne and may be collected in the same manner as compensation and expenses for administration. Such being the policy of the Act, it should, in my opinion, receive a broad and liberal construction, free from entangling technicalities which do not affect the merits of the case, and administered without too close an attention to slight deviations from the letter of the law, which, if strictly adhered to, might, in many cases, defeat the very object which the Legislature had in view.

"There will be verdict and judgment in favour of the plaintiff and against the defendant for \$4,228; the defendants must pay the costs of the action."

*Fleck versus Workmen's Compensation Board* (New Brunswick), 1934 *Dominion Law Reports*, vol. 2, page 145.

PREPARED AND EDITED BY  
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 34] MAY, 1934 [NUMBER 5

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

ACCORDING to data tabulated in the Dominion Bureau of Statistics from 8,477 establishments, employment at the beginning of April showed a seasonal falling-off, the reported staffs aggregating 847,993 persons, compared with 861,053 in the preceding month. The statistics furnished by leading firms since 1920 show that in twelve of these thirteen years, employment on April 1, has experienced a between-seasons contraction, ordinarily resulting from the completion of the winter's work in logging camps, and prior to the absorption of any considerable numbers of persons in the outdoor industries opening up in the spring and summer. The general loss at the beginning of April 1934, rather exceeded the average decline on that date in the years for which statistics are available; the situation this year, considerably affected by the above factors, was further complicated by the release of unusually large numbers of men who had been temporarily employed in clearing the railway tracks and roads after last winter's severe storms, and by numerous shut-downs over the Easter holidays, this year reflected to some extent in the employment statistics, since Easter fell on April 1. The index of employment, based on the 1926 average as 100, stood at 91.3 on April 1, 1934, compared with 92.7 on March 1, 1934, while on April 1, in preceding years it was as follows:—1933, 76.0; 1932, 87.5; 1931, 99.7; 1930, 107.8; 1929, 110.4; 1928, 102.3; 1927, 97.4; 1926, 92.5; 1925, 88.3; 1924, 90.4; 1923, 88.7; 1922, 81.8 and 1921, 85.1. The index on the latest date was higher than in the early spring of the last two years.

There was an increase on April 1, in manufacturing, especially of leather, lumber, textile and iron and steel products. Metallic ore mining, building construction, services and trade also showed improvement; the gains in trade were unusually large, having only once been exceeded in the years since 1920. On the other hand, logging camps reported very large seasonal reductions, a reaction from an exceptionally active season in bush work, and there were important declines in railway construction and maintenance.

At the beginning of April, 1934, the percentage of idleness reported by local trade unions was 19.5, compared with 20 per cent at the beginning of March and with 25.1 per cent at the beginning of April, 1933. The percentage for March was based on the reports furnished to the Department of Labour by 1,666 labour organizations, with a total of 145,476 members.

The reports for the Department of Labour from the offices of the Employment Service of Canada showed that the volume of business transacted during March, 1934, as indicated by the average daily placements, was slightly below that of the preceding month, but greatly in excess of that of the corresponding month of last year. Total placements in March, however, were higher than those in February, owing to the greater number of working days. Vacancies in March, 1934, numbered 32,607, applications 57,828, and placements in regular and casual employment 31,162.

In retail prices the cost per week of a family budget of staple foods, fuel and lighting and rent at the beginning of April was lower, due to the lower cost of foods, chiefly eggs. The cost of the budget for April was \$16.28 as compared with \$16.51 for March; \$15.74 for April, 1933; \$21.53 for April, 1930; \$21.64 for April, 1926; \$20.66 for April, 1922; \$26.92 for July, 1920 (the post war peak); and \$14.32 for April, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics was again slightly lower at 71.1 for April as compared with 72.0 for March. The decrease was due mainly to lower prices for certain farm products and raw materials. Figures for previous dates are 65.4 for April, 1933; 91.2 for April, 1930; 101.2 for April, 1926; 98.4 for April, 1922; 164.3 for May, 1920 (the post war peak); and 64.0 for April, 1914.

The table of monthly statistics giving the latest information available reflecting industrial conditions is shown on page 395. The index of the physical volume of business was substantially higher in March than in the preceding month which had shown a slight recession from the level in January. All the chief factors in the index were higher, mineral production mainly because of greatly increased gold shipments and exports of copper; manufacturing

because of increases in foodstuffs, textiles, forestry products, iron and steel and imports of crude petroleum; construction because of an increase in contracts awarded; and distribution because of increases in trade employment, carloadings and exports. Electric power output was also considerably higher. As compared with a year ago all of the principal factors were higher, the total index being up 36 per cent. Statistics available for April show employment, wholesale prices and railroad earnings at slightly lower levels than in March but higher than a year ago. Car loadings and contracts awarded were higher both as compared with the previous month and as compared with a year ago.

The number of strikes and lockouts recorded for April was 21, involving 5,282 workers, and causing a time loss of 78,178 man working days, as compared with 32 disputes in March, involving 7,275 workers, with a time loss of 91,332 man working days. A year ago, April, 1933, the number of disputes recorded was comparatively small, being only four, involving 370 workers with a time loss of 2,270 working days. Three disputes, namely, lumber workers in Vancouver Island, and coal miners at Stellarton, N.S., and at Minto, N.B., involved 3,500 workers, accounting for the greater part of the totals for April, both of workers involved and time loss; the first two of these disputes were in progress during March, and all three were terminated early in May. Twelve disputes terminated during the month, five in favour of the employers, two in favour of the workers, five ending in compromises or being partially successful. The number of disputes unterminated at the end of April was nine, involving 3,782 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been called off or definitely declared terminated by the unions involved.

#### **Industrial Disputes Investigation Act.**

During the past month the Department received a report from the Board of Conciliation and Investigation established to deal with the dispute between the City of Edmonton and employees in the Waterworks, Engineer's and Power House Departments. Three new applications were received, and a Board was appointed as the result of an earlier application. The text of the report above mentioned, with particulars of the proceedings during the month, appears on page 401. Reference is also made to the settlement, under the Manitoba Industrial Conditions Act, of the dispute between the Winni-

peg Electric Company and its employees, which was dealt with last year by a Board established under the Industrial Disputes Investigation Act.

#### **Combines Investigation Act.**

Hearing of the appeal of the Canadian Import Company, Limited, and four related companies against their conviction as members of an unlawful combine in the importation of British anthracite coal was begun in the Quebec Court of King's Bench on May 1 with Chief Justice Sir Matthias Telier presiding. The conviction of the five companies after an investigation under the Combines Investigation Act, was reported in the *LABOUR GAZETTE*, January, 1934, page 30. After a week's hearings, judgment on the appeal was reserved.

#### **"Labour Legislation in Canada, 1933."**

The fifth annual supplement to the volume "Labour Legislation in Canada as existing December 31, 1928" has been published by the Department of Labour under the title: "Labour Legislation in Canada, 1933." The new supplement follows the lines of former reports, containing the text of the various Dominion and provincial labour laws, together with certain orders in council and a number of regulations made under statutory authority, notes being added to the text to interpret new amendments. The legislation of 1933 covers a wide range of subjects, including the protection of wages, hours of labour, the employment of women and children, workmen's compensation, unemployment relief and land settlement, safety and health of workers, licensing of workmen, pensions, insurance, etc. New legislation in Canada is outlined in the *LABOUR GAZETTE* on the conclusion of each session.

The main volume in this series may be obtained from the Department of Labour for one dollar, the charge for each of the five annual supplements being 25 cents.

#### **Unemployment statistics throughout the world.**

The last quarterly tables of unemployment and employment published by the International Labour Office in *Industrial and Labour Information*, April 16, 1934, show that for the fourth consecutive quarter an improvement in the situation may be observed. "If the figures in the latest month for which statistics are available be compared with those of twelve months previously, thus eliminating seasonal movements, it is seen that unemployment is lower practically everywhere and the rate of decrease is usually

## MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(Official statistics except where noted)

	1934			1933

(1) Calculated from yields of Ontario bonds.

(2) For group figures, see articles elsewhere in this issue.

(3) Figures for end of previous month.

(4) Figures for four weeks ending April 28, 1934, and corresponding previous periods.

(5) Figures for four weeks ending April 21, March 24 and February 24, 1934; April 22, March 25 and February 25, 1933.

(7) MacLean's Building Review.

greater than it was three months ago. Exceptions to this rule are to be found in Belgium, Bulgaria, France, the Irish Free State and Portugal, where recorded unemployment has increased as compared with twelve months ago. No clear indications can be given for Czechoslovakia, Poland, Sweden and Switzerland, where there are two or more series of figures showing divergent trends.

"The countries which show the largest percentage increase in employment are the United States, Canada and Germany, and considerable increases are also shown in Great Britain, Estonia, Japan, Latvia and South Africa. These increases are confirmed to a large extent by the statistics of unemployment.

"Comparing the unemployment figures not with a year ago but with three months ago, it will be seen that in the Northern Hemisphere they are for the most part higher. This is due to seasonal influences which always lead to increased unemployment during the winter. In the Southern Hemisphere, on the other hand, the seasonal trend is downwards at the beginning of the year, and Australia, Chile, New Zealand and South Africa all show lower unemployment figures, or higher employment figures, as compared with three months before."

#### **Program of British Columbia Economic Council.**

The Economic Council provided for in recent legislation by the British Columbia Legislature (LABOUR GAZETTE, April, 1934, page 307), is to consist of the following members: Dr.

W. A. Carrothers, chairman; James O. Nicholls, miner, Nanaimo; James G. Robson, lumberman, Vancouver; Thomas W. Bingay, Consolidated Smelters, Trail; James H. Lawson, barrister, Vancouver; Percival Edward French, scientific agriculturist, Vernon; Dr. H. C. Winch, hospital superintendent, Hazelton.

The chairman has prepared the following agenda of subjects to be dealt with by the Council:—(1) Survey of the possible economic uses of land with particular reference to character of soil, climate and marketing of produce; (2) Economic survey of forest resources, studying character and condition of available timber, condition of logged-over areas in relation to reforestation either naturally or by artificial means; (3) A study of marginal "uneconomic" lands occupied and unoccupied; (4) Survey of unoccupied areas of good land and development of sound settlement policy; (5) The problem of the milk producers of the Fraser Valley from the point of view of the economic production of milk in relation to the available market; (6) Production and sale of Okanagan fruit;

By-products and orderly marketing; (7) The coal industry; (8) Co-ordination of existing bodies studying provincial problems, such as scientific investigations by the Dominion and Provincial Government and the University, and economic studies of voluntary trade associations for agriculture, mining, manufacturing, etc. (It is hoped to make the Economic Council a clearing house of ideas emerging from these sources of value to the Government); (9) Survey of population of the Province with regard to conditions of employment and special training; this may begin with classification of the unemployed and be extended to the employed; the object is to guide the province in evolving employment policies; (10) Survey of the standards of living in various parts of the Province with regard to social conditions, educational facilities, health, cultural opportunities, etc.; (11) Survey of the financial condition of the people, with regard to status of farm mortgages, tax payments, which in relation to agriculture may assist in determining what types of agriculture are economic in certain areas; (12) Study of markets, actual and potential, for provincial products.

#### **Problem of permanent partial disability in industry.**

A conference to consider the problem of adequate provision for workmen who have sustained partial disablement of a permanent character was held at Edmonton during April, when representatives of the Alberta Federation of Labour brought the case of these men to the attention of the Government and the Workmen's Compensation Board of Alberta. "If one goes over the records in the Workmen's Compensation office," they stated, "he finds the amount of individual pensions in some cases are \$12, \$13 or \$15 a month, because of a permanent partial disability which has been sustained by the workman, and the board itself agrees that this is based upon the doctor's statement and that the man is unable to return to his former occupation. While there is a provision in the Act for spending a certain amount of money to rehabilitate workmen, the Board has done practically nothing along this line because it finds itself in the position that it cannot give guidance with any assurance that the workman after having been retrained can secure employment in the field for which he has been retrained, and thereby secure sustaining employment. In a great number of cases the workmen are getting on in years and so again the expenditure for retraining is hardly warranted, and we therefore believe that the time has arrived when the policy adopted ten or twelve years ago, to meet the then ex-

isting conditions, does not merit its continuance, and that there must be a new application applied in the enforcement of sections of the present Act. . . . . "The regulations, which the Workmen's Compensation Board enforce at this time, were adopted during the period following 1919, when there was considerable industrial activity and when there was a possibility for partially disabled workmen to secure employment of a light but sustaining character. Due to the increasing number of these injured workmen the probability of such workmen obtaining positions is now quite remote."

#### **Calculation of "average earnings" for compensation purposes.**

A bill to amend the Workmen's Compensation Act, now before the Nova Scotia Legislature, would provide that the estimated "average earnings" or "earning capacity" upon which is calculated the amount of compensation that will be paid to an injured workman, shall not be less than \$10 a week. By Section 45 of the Act as it now stands average earnings or earning capacity at the time of an injury "may be calculated upon the daily, weekly or monthly wages or other regular remuneration which the workman was receiving at the time of the injury, or upon the average yearly earnings of the workman for three years prior to the injury, or upon the probable yearly earning capacity of the workman at the time of injury as may appear to the board best to represent the actual loss of earnings suffered by the workman by reason of the injury, but not so as in any case to exceed the rate of \$1,200 per year." The Bill would add to this section the words: "and such average earnings and earning capacity shall not be fixed below ten dollars per week."

The proposed amendment is designed to remove the grievance of workmen who work only on one or two shifts a week, with the result that they receive very small amounts in compensation for injuries. The amending Bill would also increase the proportion of average earnings that may be paid to an injured workman from 55 to 60 per cent.

#### **Decline in mining accidents in Ontario in 1933.**

The proportion of fatal accidents per thousand workers employed in the mining industry in Ontario during 1933 was less than in any year since 1915, according to a report (Bulletin No. 91) on Mining Accidents in Ontario in 1933 recently published by the provincial Department of Mines. The proportion was 1.57 for 1933; 1.69 for 1932; 2.03 for 1931; 3.02 for 1930; 2.89 for 1929; and 4.76 for 1928. It is

stated that during 1933, at the mines, metallurgical works, quarries, and clay, sand and gravel pits regulated by the provincial Mining Act, there were 1,538 accidents reported up to January 16, 1934. Twenty-five fatalities, arising out of 24 separate accidents were reported. These returns represent an increase of 63 in the total number of accidents, and the same number of fatalities as recorded for the previous year. The fatality rate of 1.57 per thousand men employed is 1.27 per thousand lower than the average for the past twenty-five years. There were 95 non-fatal accidents per thousand men employed, a decrease of 3 per thousand from the rate of 1932. The percentage of non-fatal accidents followed by infection increased from 6.5 in 1932 to 7.3 in 1933. Of the 25 fatalities during the year, 17 were in gold mines; 3 in nickel mines; one each in silver, copper-lead zinc mines, and metallurgical works; and 2 in sand, gravel and clay pits.

The report analyses the causes of both fatal and non-fatal accidents, giving full particulars in regard to each fatality.

#### **Movement to regulate industrial conditions in Canada.**

Codes of fair practice for various industries are being considered in many centres throughout Canada. It is reported that the baking industry may be the first to secure action in this direction under the provisions of the Alberta Trade and Industry Act (LABOUR GAZETTE, April, 1934, page 305). In British Columbia the master bakers are asking the new Board of Industrial Relations to establish regulations for the industry under the Acts administered by that body, namely, the Male Minimum Wage Act, the Female Minimum Wage Act, and the Hours of Work Act. A proposed code for the baking industry was also submitted by the organized bakers of Saint John, N.B., to the Committee of the House of Commons on Price Spreads and Mass Buying (LABOUR GAZETTE, February, 1934, page 92). It is reported that similar action is being taken in several provinces in connection with the men's wear trade, restaurants, retail stores, meat and groceries, hair dressing parlours, etc., and a code for the building industry is now under consideration by the Canadian Lumbermen's Association.

The present issue of the LABOUR GAZETTE contains the text of the first orders by the British Columbia Board of Industrial Relations fixing the hours of work in lumber mills and saw mills; the Chairman of the Board stated that these orders were designed to spread the available employment over the maximum number of workers without crippling the in-

dustry. This issue contains also the text of the amended "Collective Labour Agreements Extension Act," recently proclaimed in Quebec, which provides for the legalizing of industrial agreements between employers and workers establishing standard conditions in the several industries. Negotiations for agreements under this act are understood to be in progress in certain industries.

### **Child Labour in the Province of Quebec.**

A report has been issued recently by the special committee appointed three years ago by the Montreal Junior Board of Trade to investigate child labour in Quebec. The investigation was confined to children under seventeen years of age employed in factories, stores, street trades and in messenger and delivery services, but did not cover those in agriculture. As the result of their investigation the committee found that while children working in factories benefit from occasional government inspections and from the enforcement of regulations, these inspections were in practice incidental and haphazard; that children working outside factories were in reality free from governmental inspection; that there was no enforcement of the existing laws for the safeguarding of working children as distinct from other workers; that child labour legislation was confused and ambiguous and was not generally known; and that child workers were "likely to be exploited with little hope of redress."

The Committee makes the following recommendations: That it is most desirable that a thorough survey of child labour conditions in the Province of Quebec be undertaken without delay by competent persons armed with the necessary powers; that a committee of lawyers and social workers, representative of all religious denominations, be formed to redraft, consolidate, clarify and extend the existing legislation; that, upon completion, the survey and the redraft of the laws be presented to the Government with a prayer for immediate action; that the Government be requested immediately to create more adequate machinery for the enforcement of child labour laws; that the Montreal Junior Board of Trade consider and report on the advisability of a system of compulsory education for the Province of Quebec.

### **Social and economic changes affecting vocational education.**

In 1932 United States Federal Board for Vocational Education undertook to co-operate with the American Vocational Association in a study of changing economic and social conditions, and of the problems involved in adapting programs of vocational

education to these changes. Some of these problems are stated in the report of the Federal Board as follows:—

"Social and economic changes surveyed in this study, as they affect vocational requirements being imposed upon wage earners, farmers, and homemakers, include the increasing mechanization of processes and increasing utilization of mechanical power in industry and agriculture, with the resultant displacement of labour, changing demands for skill, and insecurity of job tenure. Among other tendencies of significance for vocational programs are the increasing adoption by large corporations of scientific practices of personnel selection; the increasing demand for, and the rising standards of efficiency; the increasing specialization of processes and jobs; the increasing difficulty for workers of learning on the job in highly mechanized industries; the increasing demand for broad technical knowledge; the increasing need for interpretation in terms of trade techniques and farm practices of the cumulating results of technological research; the increasing responsibilities of vocational programs in dealing with such large population drifts as the migration from farm to city, and from city to farm; the increasing need for development of live-at-home programs, especially in a period of reduced incomes and of widespread unemployment; the increasing educational disability of rural areas; the increasing urbanization of the home, socialization of the homemaker's job, and rising standards of efficiency in homemaking; and the rising age of entrance into employment, with the very serious resultant social problem of what to do with the 14 to 18 year old boy or girl who is being barred from employment to a more advanced age. In its larger aspects the problem presented in this inquiry may be defined as the problem of determining in what ways vocational programs can be made to function effectively in maintaining for our workers continuous occupational adjustment, thereby avoiding as far as may be possible displacement and unemployment in the face of an intensely dynamic economic situation."

### **Medical Service Board in Saskatchewan.**

Provision has been made in Saskatchewan by an amendment to the Public Health Act, for the establishment of a provincial Health Services Board consisting of the Minister and Deputy Minister of Public Health, the chairman of the Local Government Board, the Deputy Minister of Municipal Affairs and the Commissioner of the Saskatchewan Division of the Canadian Red Cross Society. The new Board will take over from the Saskatchewan Relief Commission the administration of medical, hospital, dental and

allied relief services in the province. It may institute inquiries into the needs of the people with respect to such health services, including drugs, and appliances, and into the advisability of providing facilities for a periodical medical examination, and other matters. Among its other powers the Board has authority to confer with and advise employers and employees in cities with respect to establishing health services for such employees.

#### **Accident liability of re-employed workers.**

The need for building up safety organizations in industry "before the full tide of re-employment sets in" is pointed out by the Metropolitan Life Insurance

Company in a recent issue of their *Statistical Bulletin*. The records of the company show a decline in occupational fatalities corresponding with the shrinkage in the volume of employment during the depression, and a rise in the accident rate in the second half of 1933, when employment began to move upwards. "Country wide rejoicing at the return of large numbers of wage earners to gainful employment," the *Bulletin* states, "must be tempered somewhat by the thought that increased employment will mean a rise in the national toll of fatal and non-fatal accidental injuries. For every 10,000 persons re-employed, anywhere from one to more than fifty, it may be expected, will be killed in the course of a year of employment, according as they find work in light manufacturing, in agriculture, on the railroads, in mining, in structural iron construction, in power transmission, or in some other of the many industries with varying occupational hazards. The net result will be an increase of many thousands killed and of hundreds of thousands injured. This increased mortality, it can be stated, will come more or less inevitably; for the curve of accidental injuries still follows very closely the curve of employment, despite many notable achievements in accident prevention by large industrial establishments and even by entire industries."

#### **Land settlement and lumbering in Quebec.**

The changed conditions of employment in the woods in the Province of Quebec were described by the Hon. J. H. Kelly in the debate

in the Legislative Council on the Forest Operations Commissions Act (LABOUR GAZETTE, April, 1934, page 308). The Hon. Mr. Kelly stated that colonization made its greatest progress in the province in the days when timber limits were held as a family heritage and passed from father to son. In those days the lumberjacks left for the woods around

All Saints' Day and remained until Easter, that is to say, for a period of four or five months. Then came the drive and when that was over most of the men returned to their farms with their winter savings, while others worked during the summer in the sawmills. To-day, the speaker declared, the old personal contact has been lost, and large companies, with control far removed from the local points, engage labour without thought of personal contact. What should be done, in his opinion, was to give the work to the settlers and their sons, men who knew the woods and were at home there, and could give a good day's return for a good day's wages. "Our mills," he continued, "should employ settlers in their camps in preference to anyone else. The settlers would benefit greatly therefrom and the operators would have a splendid class of strong, healthy seasoned men to carry on their forestry operations. This would mean a greater cut at no additional expense. The average cut per man in the camps has decreased because very often the men employed in the camps are not woodsmen. The farmer's son makes the best settler, but he will not settle on new land unless he is sure of making a living. He will drift to our cities instead. Give him the assurance that he can sell his wood or that he will be given employment in the lumber camps during the winter and you will immediately make land settlement attractive."

#### **Change of base for employment statistics in United States.**

Acting on the advice of the Advisory Committee of the Secretary of Labour, the United States Bureau of Labour Statistics recently altered the base used for its index numbers of employment from the twelve-months' average for 1926 to the average for the three-year period 1923-24-25. These figures are quoted in the monthly article in the LABOUR GAZETTE entitled "Employment and Unemployment in Great Britain and the United States." The index numbers in the present issue are on the new base. The broader base was selected as preferable to the single year because it minimizes unusual conditions existing in an industry in any single year, and also for the purpose of placing the Bureau's indexes on a base similar to that used in several other official and private series of indexes of employment, pay-rolls and production.

A second change in the monthly employment statistics has been effected for the purpose of making the indexes reflect changes in total factory employment and pay-rolls not only from month to month, but also over a

period of years. Former indexes, it was found, did not accurately reflect the long-time trends; they did not fully show the increases resulting from the establishment of new plants, or the decreases brought about by the permanent shut-down of establishments not included in the Bureau's sample. Such changes are shown only by the complete coverage of every plant in each industry, as made by the Biennial Census of Manufactures. As now re-adjusted, the Bureau of Labour Statistics' index makes allowance for new establishments coming into existence, and old establishments dropping out.

### **Increase of employment in Great Britain in 1933.**

The annual report of the British Ministry of Labour for 1933 reviews the general state of employment during the year. It is noted that 1933 was the first year, since the onset of the general depression in the closing months of 1929, in which there was a definite improvement in employment. The year opened with the live register showing a total of 2,903,065 unemployed in Great Britain at the end of January—the highest ever recorded; but from that date there began an improvement which continued, almost without interruption, throughout the year. The forces making for the increase in employment were sufficient to outweigh the opposing seasonal influences in the latter part of the year, for, contrary to the normal movement, the improvement persisted throughout the autumn and early winter. By December the number of persons on the live register in Great Britain had fallen to 2,224,079—a decrease of 499,208 compared with a year earlier; while the estimated number of insured persons in employment had risen to 10,008,000, 5,568,000 higher than a year previously.

There was a marked reduction in unemployment among boys and girls during the year, partly owing to the general improvement in the state of employment, and partly owing to the low birth-rate in the years 1915-1919, which reduced the number of boys and girls available for employment in 1933 to its lowest point. There was, indeed, an actual shortage of boy and girl labour during the year in many districts; in London, for example, the number of boys and girls registered for employment, dropped, at the end of the year, to the lowest level on record, while more than 4,000 juvenile vacancies remained unfilled. In most of the depressed areas, on the other hand, unemployment among juveniles remained severe.

### **Instructional centres for unemployed in Great Britain.**

Instructional centres have developed in Great Britain in accordance with a recommendation of the Royal Commission on Unemployment Insurance (LABOUR GAZETTE, December, 1932, page 1308). "The Department of Labour has two types of centre, first the training centre proper, at which a six months' course is given in certain trades, and secondly the instructional centre, where a three months' course is provided with the primary object of re-conditioning. 5,303 men passed through the former centres during the twelve months ended February 26, 1934; and of those who completed their training, 3,944, or 88.8 per cent, obtained employment. 10,893 men passed through the instructional centres during the period, and of those who completed their training, 1,594, or 16.3 per cent obtained employment. Attendance at the instructional centres is not limited to the numbers for which employment is likely to be available at the end of the course; and those who volunteer for the course do so primarily for the benefit they will derive in increased employability."

Increased activity in safety work in view of the partial recovery of business was anticipated in the secretary's report to the Nova Scotia Accident Prevention Association. Mr. Thompson noted that corresponding with a decline in the wage roll submitted to the Workmen's Compensation Board from \$33,542,481 in 1932 to \$30,637,155, the number of accidents reported to the Board last year showed a reduction of 40 from the preceding year.

Labour conditions at Trail, British Columbia, are reported to be improving by degrees, more work being provided at the smelter, with the result that workers on relief have been reduced in number by one-third since the beginning of the year. Various mines in the district have reopened, some with enlarged operation. A considerable number of carloads of poles are being sent from Nelson for sale in the United States.

The Hon. R. A. Hoey, Minister of Health and Public Welfare for Manitoba, announced in the Legislature on March 12 that travelling medical clinics to treat children in unorganized territory would be initiated this year in connection with the work of the public health nurses. The estimates for the coming year provide for twenty public health nurses in the province. New arrangements have been made with a number of municipalities under which the provincial government will pay only one-half of the cost of their public health nursing service.

## RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

**A**PPPLICATIONS for the establishment of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act have been received in the Department of Labour during the past month as follows:—

1. From certain employees of the Corporation of the city of Victoria, B.C., being members of the City Fire Fighters' Local Union No. 258, International Association of Fire Fighters. The wage rates of the employees in question had been reduced 5 per cent on April 1, 1932, and a further 10 per cent on April 1, 1933. The dispute relates to the employees' request for restoration of the wage rates in effect prior to April 1, 1932. Seventy-seven employees are stated to be affected. As fire fighters do not come within the direct scope of the Industrial Disputes Investigation Act, a Board of Conciliation and Investigation can be established only with the joint consent of the parties concerned. At the time of going to press the municipal authorities have not stated definitely that they are agreeable to board procedure, and accordingly a Board has not been established.

2. From the Niagara, St. Catharines and Toronto Railway Company concerning a dispute with its freight trainmen, motormen and polemen, twenty-five in number, said to be members of the Brotherhood of Locomotive Engineers and the Brotherhood of Railroad Trainmen. The dispute arose as a result of the proposal of the company to put into effect as from February 15, 1934, a wages deduction of 5 per cent in addition to the 10 per cent deduction already in force, making a total deduction of 15 per cent from wages calculated at the schedule basic rates. Following receipt of the application, the Department arranged a conference in Montreal on Thursday, May 3, between representatives of the parties to the dispute. The Chief Conciliation Officer of the Department was present and took an active part in the proceedings. As a result of the negotiations, which lasted throughout the day, a settlement was reached, the parties agreeing to a deduction of 15 per cent from basic rates of pay from May 16, 1934, to December 31, 1934, during which period the minimum day in freight service shall be 9½ hours for week days for each day used; and effective January 1, 1935, a 10 per cent deduction from basis rates of pay "or such other percentage deduction as is then being generally established for employees on the Canadian National Railways and provided that either party may, after

November 1, 1934, serve thirty (30) days' notice of a desire to change such percentage to become effective January 1, 1935."

3. From employees of the Corporation of the city of Saskatoon, being members of the City Fire Fighters' Local Union No. 80, International Association of Fire Fighters. The cause of the dispute is stated to be a proposal of the municipal authorities to put into operation in 1934 certain wages reductions in addition to those already in effect. The dispute affects fifty-five employees in the Fire Department. As in the case of the Victoria Fire Fighters, mentioned above, this dispute falls outside the direct scope of the Industrial Disputes Investigation Act, and, the civic authorities having so far failed to indicate their willingness to procedure under the statute, a Board has not been established.

In addition to the above mentioned applications a request for the establishment of a Board of Conciliation and Investigation was received in the Department during April from the New Brunswick Miners' Union on behalf of employees of the following coal operators in the Minto area of the Province of New Brunswick, namely: the Minto Coal Company, the Miramichi Lumber Company, Welton and Henderson, Limited, Rothwell Coal Company, the Newcastle Coal Company, the Avon Coal Company, and Harvey Welton.

The dispute related to the employees' desire for certain wage adjustments and union recognition. Approximately one thousand men were stated to be affected by the negotiations, about five hundred of whom had ceased work, the employees of the Minto Coal Company having gone on strike on April 3, and those of the Welton and Henderson mine about April 16, both coal mines being closed. All other mines in the district were operating fully, the men remaining at work. An officer of the Department who was despatched to Minto reported that he had discussed the situation with the union officials, and explained to them that the men who had gone on strike prior to making application for a Board of Conciliation and Investigation had violated the provisions of the Industrial Disputes Investigation Act. The officers of the union agreed that the strikers would return to work. The two employing companies, however, refused to take their men back unless they applied individually for employment at the mines, and would give no undertaking that they would then be restored to their former positions. It is understood that the men have accepted the conditions offered.

### Board Established

In connection with the application for the establishment of a Board of Conciliation and Investigation which was received in the Department of Labour on March 30 from employees of the Toronto Transportation Commissioners, being members of the Toronto Railway Employees' Union, the Chief Conciliation Officer of the Department, Mr. M. S. Campbell, was instructed early in April to proceed to Toronto with a view to facilitating, if possible, negotiations between the parties concerned in this dispute. The negotiations, however, proved unsuccessful and on April 13 the Minister established a Board of Conciliation and Investigation composed as follows: The Honourable Mr. Justice Patrick Kerwin, Toronto, Chairman, appointed by the Minister in the absence of a joint recommendation from the other Board members; His Honour Judge C. H. Widdifield, Toronto, nominated by the employer; and Mr. Fred Bancroft, Oakville, Ontario, nominated by the men.

### Winnipeg Electric Dispute

It will be recalled that during the summer of 1933 a Board of Conciliation and Investigation, under the chairmanship of the Honourable Mr. Justice A. K. Dysart, dealt with a dispute between the Winnipeg Electric Company and its motormen, conductors and busmen, and members in the Mechanical and Track Departments, the text of their report being given in the LABOUR GAZETTE, September, 1933, page 878. The Board's findings were rejected by the employees. Negotiations which continued for several weeks proving unsuccessful, the dispute was referred to a Joint Council of Industry and Commission appointed by the Provincial Government under the Manitoba Industrial Conditions Act. Through the efforts of the Council a settlement was effected early in April. A statement with respect to the proceedings of the provincial Council and of the agreements reached will be found at page 404.

### Report of Board in dispute between the Corporation of the City of Edmonton and certain of its employees in the Waterworks, Engineer's and Power House Departments.

The findings of the Board of Conciliation and Investigation established to deal with a dispute between the Corporation of the City of Edmonton and certain of its employees in the Waterworks, Engineer's and Power House Departments, members of the Edmonton Civic Employees Union No. 30, were received in the Department of Labour during April. The Board was composed of His Honour Judge John A. Jackson of Lethbridge, Alberta, Chairman, appointed on the joint recommendation of the other Board members; and Messrs. James T. J. Collisson, K.C., and Charles W. Lee, both of Edmonton, nominees of the City and employees respectively.

The nature and causes of the dispute, as well as the employees' claims, were set forth in the application received from the employees as follows:—

**"Nature of Dispute:**—A dispute between the City and the Union as to whether Malcolm Ainslie, a member and Business Agent of the union, was unjustly treated in being suspended and dismissed from his employment by the City.

**"Causes of Dispute:**—On June 2, 1930, W. Perree, General Foreman of the City's Waterworks Department, suspended Ainslie, giving as a reason that Ainslie had made statements in a meeting of the Union held on May 29, 1930, injurious to his (Perree's) character and reputation.

"The Union appealed to the City Commissioners under the terms of clause 11 of the agreement then in force between the City and the union. . . . The Commissioners decided against

the Union's contention and dismissed Ainslie from the City's service on June 4, 1930. The Union then appealed to the City Council. After numerous delays and interviews and after the Commissioners had, on December 19th, 28th, and 29th, 1932, taken the evidence of a large number of witnesses for and against the Union's contention, which evidence was later reported to the Council, the Council on May 8, 1933, decided against the Union's contention. The Union thereupon took steps to have the present application for a Board of Conciliation forwarded to the Department of Labour.

**"Claims and Demands:**—The Union claims that the City dealt with Ainslie and the Union unfairly within the meaning of said clause 11 in suspending and dismissing Ainslie for statements alleged to have been made by him in the Union meeting for the reason:

- (a) That all union meetings are privileged as regards the City;"
- (b) That the City is not justified in attempting to ascertain or act upon the proceedings of a Union meeting;
- (c) That even if the City be held to have the right to so ascertain and act upon such proceedings, the proper course was for the City to make a request to the Union for a report as to what was actually stated during the meeting by Ainslie, and as to what resolution, if any, with reference to such statements was adopted by the Union;
- (d) That even if the City be held to have such right, Ainslie's statements in the Union meeting, and the resolution he then moved, and which was adopted by the Union, were only such as were fair and proper and made in a discreet and careful manner in communicating to the Union a written statement of grievance signed by a member of

the Union and delivered to the said Ainslie as Chairman of the Grievance Committee of the Union for the purpose of being communicated to the Union;

- (e) That Ainslie's dismissal is a threat to any employee acting as a Chairman of a Grievance Committee or business agent for a union, and makes the agreement between City and Union useless;
- (f) That apart from such alleged statements no other sufficient reason existed for Ainslie's suspension or dismissal."

Evidence was presented to the Board by thirty-one witnesses during the week beginning December 4, 1933, and thirty exhibits and numerous other documents were filed. The evidence of J. W. Turner, formerly Superintendent of the Waterworks Department, was taken at Victoria, B.C., by the Chairman on March 6, 1934.

The report of the Board is signed by the Chairman and Mr. Lee, the Board member nominated by the employees. The Board reports that Ainslie was unjustly dealt with when he was suspended and dismissed, and finds as follows on the reasons given by the Union upholding its contention:—

"(a) That all Union meetings are privileged as regards the City."

"The Union is no more privileged than any other secret organization. They must rely on the good faith of their members in keeping the business of their meetings from the public. In its opinion the action of the Union in the matter in dispute was privileged."

"(b) That the City is not justified in attempting to ascertain or act upon the proceedings of a Union meeting."

"The Board finds that the City did not unduly attempt to ascertain or act upon the proceedings of the Union meeting."

"(c) That even if the City be held to have the right to so ascertain and act upon such proceedings, the proper course was for the City to make a request to the Union for a report as to what was actually stated during the meeting by Ainslie, and as to what resolution, if any, with reference to such statements was adopted by the Union."

"The City might have adopted the procedure suggested but was not in duty bound to do so."

"(d) That even if the City be held to have such right, Ainslie's statements in the Union meeting, and the resolution he then moved and which was adopted by the Union were only such as were fair and proper and made in a discreet and careful manner in communicating to the Union a written statement of grievance signed by a member of the Union and delivered to the said Ainslie as Chairman of the Grievance Committee of the Union for the purpose of being communicated to the Union."

"The Board agrees with this proposition."

"(e) That Ainslie's dismissal is a threat to any employee acting as a Chairman of a Grievance Committee or business agent for a union,

and makes the agreement between City and Union useless."

"The Board cannot altogether agree with this proposition as Ainslie was not dismissed for anything he did but for something he did not say, which if he had said (but did not) would have been outside his duty and would have been proper cause for his dismissal, being unfounded."

"(f) That apart from such alleged statements no other sufficient reason existed for Ainslie's suspension or dismissal."

"The Board agrees generally with this."

Failing to effect any settlement the Board made the following recommendations:

"1. That Ainslie be reinstated as a permanent employee in the Waterworks Department with all his rights of seniority and otherwise as of and from the date of his suspension, except as to payment for loss of time, referred to hereinafter.

"2. That Ainslie be not discriminated against by reason of anything which has occurred in the past.

"3. That in lieu of payment for loss of time Ainslie be given a sum of money equal to the wages he would have earned if continued at work between June 1, 1930, and the end of August, 1930. The Board is of the opinion that as he was employed from about this time he is not entitled to more.

"4. That Ainslie be allowed wages at what would be his present rate of pay as and from April 20, 1934, until such time as he is permanently employed."

Mr. James T. J. Collisson, K.C., the City's nominee on the Board, submitted a Minority Report dissenting from the Board's findings. Mr. Collisson expressed the opinion "that Ainslie was properly dismissed for just cause from the City service on June 4, 1930, that subsequently the investigation as required by the Union Agreement was held; that Ainslie was given every opportunity to present his side of the case, and that no clause of the Union Agreement was violated."

By regulations recently issued under the Government Liquor Control Act of Alberta the employment of persons under 21 years of age in licensed premises is prohibited. This applies to hotel premises, clubs and canteens. The regulations also stipulate that "except when authority in writing has been received from the Board no female other than a licensee or the wife of a licensee shall be employed in any service in connection with the sale, handling, or serving of beer in, on, or about the portion licensed for the sale of beer in any hotel premises." Provision is made regulating the possession of liquor in first aid kits in mines, the quantity not to exceed 26 ounces, upon the written authority of the mine manager to the person in charge of first aid work.

## MANITOBA INDUSTRIAL CONDITIONS ACT

### Settlement of Dispute between the Winnipeg Electric Company and its Employees

A DISPUTE between the Winnipeg Electric Railway Company and its employees in the traffic, mechanical, track and gas departments, regarding proposed reductions in wages and changes in working conditions, was dealt with by a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, during the summer of 1933. The report of the Board, which was dated August 12, 1933, recommended for employees in the traffic, mechanical and track departments a wage scale fifteen per cent below that in effect during the period 1929 to 1931. These rates had been reduced by approximately seven per cent in February, 1932. For the gas department employees no further reduction was recommended (LABOUR GAZETTE, September, 1933, pages 878-892). The company offered to accept the award, but the employees refused and it was finally arranged that the Government of Manitoba would refer the dispute to a Joint Council of Industry and Commission under the Industrial Conditions Act. The members were appointed under an Order in Council and Letters Patent dated November 8, 1933 (LABOUR GAZETTE, December, 1933, p. 1144). The Council and Commission were as follows: Mr. Justice S. E. Richards, Chairman; Mr. Arnold Smith and Major Edgar G. Rogers, representing employers in industry in Manitoba; Mr. James J. Scott and Mr. Edgar H. Cook, representing employees connected with industry in Manitoba. The reference required the Council to report on all matters in dispute between the company and its employees in regard to rates of pay, hours of labour and conditions of employment. The report of the Council and Commission, dated April 11, 1934, stated that agreements had been signed providing for a wage scale fifteen per cent below that in effect from 1929 to 1931, but with changes in working conditions, including one providing for one week's holiday with pay for all employees having five year's seniority. The agreements are summarized elsewhere in this issue.

The Council reported that as the company had continued to pay the previous rates to the gas department employees as recommended by the Board of Conciliation and Investigation, there was no longer a dispute in that regard. The Council also dealt with cases involving seniority rights of certain employees

and former employees, but reported that in each instance circumstances prevented restoration of the seniority rights asked for (LABOUR GAZETTE, May, 1933, p. 495).

The following extract from the report deals with the settlement of the main points in dispute:

#### EXTRACT FROM THE REPORT

When the matters of dispute had been exhaustively dealt with by both sides, and documents had been considered and supporting verbal agreements heard, the Council pursued a policy of endeavouring to effect an amicable settlement between the parties. Throughout the discussions and negotiations the grounds of dispute were seen to fall into two distinct parts, viz: (1) rates of pay; (2) working conditions.

The matter of rates of pay presented the greater difficulty. For reasons explained to the Council in exhaustive detail, the Company's representatives stated that they could not deviate from the proposed 15 per cent reduction. Similarly, the employees' representatives, acting upon instructions from the men, pressed their contention that a 10 per cent reduction should be the maximum.

The Company contended that its financial condition was such as to make it imperative that the wages of the employees be reduced 15 per cent from the peak level, as recommended by the Dysart Board; and further, that the cost of living had so declined as to render the said reduction in rates of pay fair and reasonable. One particular point in the discussions before the Council deserves mention at this juncture. In support of its argument that the financial condition of the Company made it impossible to grant the rates of pay asked by the employees, the Company contended that it was required to pay to the City of Winnipeg very heavy taxes and charges which it claimed were inequitable and unjustly burdensome; and further that the City permitted unfair competition by taxicabs operated by employees who did not receive fair and reasonable wages. The Company filed stated arguments on these points, additional to verbal presentation. The Council was of the opinion that these arguments had an important bearing upon the case under review and invited the City of Winnipeg to have its representative appear to explain the City's attitude. The City did not see fit to be represented but, after some delay, it forwarded a written statement. The statement did not deal specifically with the issues but contained a general denial of the Company's contentions.

Without expressing any opinion as to the justice or merits of the taxes and charges complained of by the Company, the Council believes that such taxes and charges are a material factor affecting the Company's ability to pay fair and reasonable wages to its employees.

The Council is of the opinion that the Company's operations were adversely affected by unfair taxicab competition; but is informed that the City of Winnipeg has now taken steps to improve the situation.

With reference to the cost of living argument advanced during the inquiry, the Council feels that it should point out that "official indices of commodity prices" to-day, as issued by the Dominion Bureau of Statistics, Department of Trade and Commerce, Ottawa, record an advance over the prices applicable to the period when the Dysart Board held its inquiry.

When it became evident that no compromise could be reached in the matter of rates of pay, the Council turned its attention more particularly to the dispute with reference to working conditions. In this direction the company showed readiness to consider adjustments. It was the Council's opinion that satisfactory working conditions are of such importance to the employees that concessions by the Company in that direction might compensate, more or less, for pay reductions asked by the Company. Representatives of the employees appeared to share this opinion to some extent.

After the conclusion of formal sittings continuous negotiations were conducted under the guidance of the Council from the 8th of March to the 9th of April. At the outcome of these negotiations the representatives of the parties reached agreement upon the matters formerly in dispute. New written agreements were drafted to cover relations between the Company and employees of the Traffic, Mechanical and Track Departments. At a mass meeting held on the 7th of April these agreements, with several minor changes, were ratified by the employees. The agreements deal with rates of pay, hours of labour and conditions of employment during the period May 1, 1934, to April 30, 1935. Copies of the new agreements are

attached hereto as appendices to this report.

Several minor points of dispute were settled by verbal agreement during negotiations and were considered not of sufficient importance to be incorporated in the formal agreements. On behalf of the Company, the Vice-President in charge of Operation agreed to forward to the men's representatives letters confirming mutual understandings reached on these points.

The Company, by its representatives, also agreed to refund to the men affected the disputed four cents per hour deducted during the period May 1 to August 15, 1934; and also the percentage of wage differentials deducted subsequent to August 15, 1934, with reference to Sunday work and one-man and two-man car operators; and also certain special allowances which had been deducted from certain employees of mechanical department.

An important concession by the Company under the new agreements was the granting of one week's holiday with pay to all men in the affected departments having five years' seniority. This concession was granted by the Company upon the understanding that the men would not, at a later date, ask that the holiday seniority basis be reduced to a period less than five years.

The dispute with reference to the operation of the St. Mary's Road bus route is not dealt with by the agreements referred to above. The members of the Council are satisfied, upon submissions and evidence tendered, that the Company entered into a *bona fide* agreement whereby one Henteleff contracted to perform, as his own undertaking, the duties and responsibilities of the Company with respect to the bus route.

## Industrial Councils in the Netherlands

An Industrial Councils Act of April 7, 1933, came into force in the Netherlands on October 20, 1933. Industrial councils are to be established, either for the whole country or for specified areas, in every industry in which circumstances render their existence desirable. Each Council will be composed of an even number of members, not less than six or more than twenty. Members may be represented by substitutes. Half the members (and substitutes) will be nominated by the employers' organization or organizations designated to that effect by the Minister, and half by the workers' organization or organizations covering the industry concerned.

An Industrial Council is required to determine conditions of unemployment, if possible in the form of collective agreements; to draw up regulations for vocational training; to prepare measures for the prevention and reduction of unemployment and the creation of additional work; to do all it can to improve relations between employers and workers in the different undertakings, by means of representatives appointed to that end, and in the industry as a whole; to encourage the establishment of funds and other arrangements

for the benefit of the workers; to discuss technical and commercial questions arising in the industry in so far as they may affect the position of the workers; and to compile statistical data concerning the industry.

The Councils may issue orders on the subjects for which they are competent; these must be voted by two-thirds of the employers' members, two-thirds of the workers' members and the majority of the additional members. Orders must be submitted to the Government for approval, and come into force a month after promulgation. They are binding on all persons engaged in the industry concerned—that is, persons carrying out work or having work carried out in the industry or in an undertaking where work falling within the competence of the Council is performed. In case of contravention of such an order, the competent Council may inflict a fine or imprisonment.

The Councils have advisory functions, and may be consulted on any question connected with the industry; and further, they may assist in the drafting of Bills and Regulations.

## CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

### Summary of Recent Proceedings

**S**EVEN new decisions were given recently by the Canadian Railway Board of Adjustment No. 1. Earlier decisions were outlined in the *LABOUR GAZETTE*, January, 1934, page 14, and in previous issues; and the fifth report of the proceedings of the Board, covering the period from October 1, 1930, to September 30, 1933, was issued as a supplement to the issue of December, 1933.

The Board was established under a voluntary agreement concluded in 1918 between the various railway companies and certain of the railway organizations, its original purpose being to secure uninterrupted service on the railways during the continuance of the war. It has power to determine all differences arising between the railway companies and members of any of the six railway brotherhoods, "including the interpretation of wage schedules or agreements, having due regard to the rights of the several classes of employees and of the railways respectively."

The Board consists of six representatives of the railway companies and six representatives of labour, one for each of the following railway brotherhoods: the Brotherhood of Locomotive Engineers; the Brotherhood of Locomotive Firemen and Enginemen; the Order of Railway Conductors; the Brotherhood of Railroad Trainmen; the Order of Railroad Telegraphers; and the Brotherhood of Maintenance of Way Employees and Railway Shop Labourers.

#### Case No. 425.—Canadian National Railways (Atlantic Region) and Brotherhood of Locomotive Firemen and Enginemen.

The dispatch of engines at Moncton engine-house having increased in March, 1933, a vacancy was created for an additional hostler on several occasions, but instead of engaging additional men, the management worked one of the regular hostlers on two shifts. The employees contended that such temporary vacancies were governed by Article 12 (1) of the Firemen's schedule, which reads: "Temporary vacancies at all points will be filled by competent firemen on the spare board, who must respond when called, after seven (7) days, the senior applicant from spare board filing written application with the mechanical foreman in charge of terminal will be given the position."

As this rule had not been complied with the employees asked that four firemen who had claimed the positions should be compensated in accordance with Article 23 (a).

The management explained that the "run-around" rules of the schedule were not considered to apply to hostling service and that they referred to road service. It was alleged also that the firemen's claims were not submitted until the lapse of nearly two months.

The decision of the Board was that the first fireman on the spare list who was competent for the service as a hostler should have been called for the work on each of the occasions in question, and that any claim submitted for "run-arounds" on this basis should be allowed.

#### Case No. 426.—Canadian National Railways (Atlantic Region) and Brotherhood of Maintenance of Way Employees.

On a reduction of forces during the year 1932 a number of carpenters and painters who had been regular Bridge and Building employees on the Moncton and Halifax Divisions took jobs as labourers under Bridge and Building foremen and were paid the extra labourers' rate of 27 cents per hour. The employees contended that these men should have been paid at the rate of 42 cents per hour in accordance with Section 22, clause (g), paragraph 2 of Wage Agreement No. 8: "When reduction of staff is made, carpenters and bridgemen who take jobs as labourers, and are available for service the year round, will be paid forty-two cents (42c.) per hour. This rate will also apply to labourers in regular bridge and building gangs who have been permanently assigned or who have given twelve months' actual service as such during two seasons or more and who are available for duty when required."

The management claimed that while the above paragraph mentioned 42 cents an hour as the proper rate of pay for labourers in regular Bridge and Building gangs, the employees in question were laid-off carpenters, bridgemen, painters, etc. The management further cited the following ruling of the Railway Association of Canada, dated September 19, 1929, as follows: "The intent of the 42c. rate is to provide a higher rate than the prevailing one for common labour, for labourers in regular Bridge and Buildings gangs, that is, gangs employed on bridge, culvert or building work, who come on with the gangs each season when they are made up, or who hold themselves available for service on such gangs when required, who are qualifying themselves for promotion in these gangs to the position of Bridgemen, etc., and who have in addition the service qualification called for in Section 22, Clause 'G.' It was not the intention that this special

rate should apply to men in gangs of common labour doing ditching or other kinds of ordinary pick-and-shovel work."

The Board noted the provision in Section 1 of Agreement that "labourers in extra gangs, except those practically engaged all the year round, shall not be considered as coming under this schedule."

The decision of the Board was as follows: "When reduction in staff is made, carpenters and bridgemen who take jobs as labourers in Bridge and Building gangs are entitled to 42c. per hour. Such carpenters and bridgemen working in gangs in which other labourers are paid 42c. per hour should receive the 42 cents per hour rate. This 42c. per hour rate does not necessarily apply to laid off carpenters and bridgemen who, of their own choice, accept work in an extra gang.

"It is recommended that the claims in question should be analyzed between the Company and the employees on this basis and if any questions remain in such cases, they will be further considered by the Board upon representation of specific information in relation to them."

**Case No. 427.—Canadian National Railways (Atlantic Region) and Order of Railroad Telegraphers.**

The chief dispatcher's position on the Halifax Division became vacant in April, 1932, and a bulletin was issued to telegraphers calling for applications for the post. Later, the chief dispatcher's duties were assigned to the assistant superintendent of the Halifax Division. The telegraphers contended that the senior applicant should have been given the position in accordance with a statement made by the general manager, Atlantic Region, to the general chairman of the Order of Railroad Telegraphers on July 28, 1927, in which he said: "In connection with the position of chief dispatcher, the rule in the present schedule on the Atlantic Region provides, as you are aware, that these positions will be bulletined and filled from among the ranks of dispatchers, if qualified men are available. Although it is not to be printed in the new schedule we will continue to apply this rule on this Region."

The management stated that after the position was bulletined, as above stated, it had been decided, owing to the serious falling off in traffic, to abolish the position and to transfer its duties to the assistant superintendent. It was not considered obligatory on the railway to have a chief dispatcher in any dispatching office. The assistant superintendent was appointed from the ranks of the telegraphers, and the railway did not go outside the ranks of these employees in the matter.

The Board noted that the assistant superintendent held both positions jointly, and their decision in the case was that the telegraphers were entitled to the applications of the terms under standing contained in the letter of the general manager of the Atlantic Region quoted above.

**Case No. 428.—Canadian National Railways (Western Region) and Brotherhood of Railroad Trainmen.**

In June, 1931, an arrangement was made by letter between the company and the vice-president of the Brotherhood whereby a certain yardman was to have leave of absence to take a temporary position with the Vancouver Harbour Commissioners Railway, returning to the service of the company after a year without loss of seniority. This arrangement having been carried out the employees contended that the yardman in question should have a new seniority rating dating from his latest return to the Canadian National service. In support of their contention they cited Article 18, clause (a) of the Yard Schedule, which reads: "Yardmen entitled to regular work in yard service will lose their seniority standing after thirty (30) days' in any other class of work, except by special arrangement with the approval of the Superintendent and Local Committee, and in cases where Yardmen accept positions with the Brotherhood of Railroad Trainmen."

The decision of the Board was that the yardman's standing on the seniority list having been established by mutual arrangement between the representatives of the company and of the employees, it should be so maintained unless changed by mutual arrangement.

**Case No. 429.—Canadian National Railways (Western Region) and Order of Railway Conductors and Brotherhood of Railroad Trainmen.**

A dispute arose in regard to terminal payments to crews on inter-divisional runs, when passing through an intermediate terminal on their assignment. The representatives of the Conductors and Trainmen contended that Rule 9, clause (a) of the conductors' schedule and Rule 12 clause (a) of the trainmen's schedule, provided for terminal payments in addition to pay for the trip, for all switching operations made at terminal points, and that there are no restrictions as to the nature of the switching operations to be paid for at such points.

The management claimed that where no moves are made at the intermediate terminals, except to set out cars first out, or to pick up cars which are first out, terminal time, in addition to pay for the trip, need not be paid.

The Board sustained the claim of the employees where switching is performed by the train crew and not by any yard crew. "Such time will be deducted in computing overtime for the trip, and this switching will not be regarded as constituting switching at an intermediate point under Article 5, Rule 10, of Trainmen's schedule, and Article 5, Rule 7 of Conductor's schedule."

**Case No. 430.—Canadian National Railways (Western Region) and Order of Railway Conductors.**

A conductor was discharged from service in 1933 on a charge of mishandling transportation. The company contended that a proper investigation into the allegation was held, and that the evidence substantiated the charge. The employees contended that the man was not guilty of the alleged offense and that he should be returned to the service.

The contention of the employees was not sustained by the Board.

**Case No. 431.—Canadian National Railways (Western Region) and Order of Railway Telegraphers.**

Towards the end of July, 1932, the relief agent at Heisler, Alberta, wired the chief dispatcher at Edmonton that the regular agent would resume duty on August 1, and the chief

dispatcher instructed him to return to Edmonton unless otherwise ordered later. On July 29 the chief dispatcher sent a joint message to the agent at Hay Lake and to the relief agent at Heisler stating that the latter would be relieved at Heisler on August 1 and would go to Hay Lake on August 2 to relieve the agent at that point. For some reason the message was not delivered at either place, and the relief agent at Heisler returned to Edmonton on August 2 not having received further instructions. Consequently another man was sent to Hay Lake on August 5 as relief agent. The employees contended that the relief agent who thus lost his position should not be penalized because of the non-delivery of the chief dispatcher's message, and that being the senior relief man available and ready for duty when he arrived at Edmonton he should have been sent back to Hay Lake.

The management contended that the chief dispatcher was not required to send the message dated July 29 and while the man in question might have lost two weeks' work at Hay Lake as the result of the message not being delivered, in view of the fact that on his arrival at Edmonton there was a senior relief man available the chief dispatcher had no option but to send out the senior man.

The contention of the employees was not sustained by the Board.

## CANADIAN NATIONAL RAILWAY EMPLOYEES' BOARD OF ADJUSTMENT No. 2

### Summary of Recent Decisions
